Installation

1) Login to your Tumblr account
2) Open up your Tumblr page. It should be *'yourusername'*.tumblr.com
3) On the top right corner click on the **Customize** button
4) Now click the **Edit HTML** button
5) Copy the code from **index.html** file to Tumblr and click the **Save** button
6) You can use any text editor to copy the **index.html** code, for example **Notepad** on Windows.

Congratulations your new theme should be installed!

Custom Settings

On **Customize** page under **Appearance** you will have **over dozen** custom settings you can use to quickly alter the look of your Tumblr page. These are:

Colors

- Background
- Heading
- Paragraph
- Divider
- Quote Border
- Post Details
- Highlight

Fonts

- Heading Font
- Body Font

Toggles

- Like Button
- Reblog Button
- Time Stamp
- Notes Count
- Tags
- Share Buttons

Miscellaneous

- Google Analytics
- Disqus Shortname
- Twitter Feed Length
- Tumblr Pages Support
- Custom CSS Support

How-To Use Custom Settings & What They Do

Colors - Clicking one of the color circles on the **Customize** page lets you choose the color of the desired element, e.g. changing the **Paragraph** color changes the body text on all of the posts.

Fonts - Body and Heading font lets you choose the font you would like for your headings and body text.

Toggles - Those lets you choose if a particular function is turned on or off. Blue means on and grey means off.

Texts - These fields usually require a username for a third-party function like **Disqus Commenting** and **Google Analytics**. **Twitter Feed Length** in this case takes a number.

Miscellaneous

There is one little extra option you can use if you know **CSS**. Once again open up **Customize** page and now open up **Advanced** section. The last box "**Add custom CSS**" gives you the option to modify the CSS from Tumblr **Customize** page so you don't have to modify the theme file directly.

You can also create **Custom Pages** inside **Tumblr Dashboard**. Just click **Pages** when you are on **Customize** page and then you can create as many as you like.

Thank You!
