Hand Protection

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation; Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture; Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

Glove Material

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of glove material can not be calculated in advance and has therefore to be checked prior to the application.

Penetration time of glove material

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

Respiratory Protection

In case of brief exposure or low pollution use respiratory filter device. In case of intensive or longer exposure use respiratory protective device that is independent of circulating air.

Hygiene Measures

Immediately remove all soiled and contaminated clothing; Wash hands before breaks and at the end of work; Avoid contact with eyes and skin. Keep away from foodstuffs, beverages and feed. Do not inhale dust/smoke/mist.
