

Download Instructions

Overview:

1. Use this document as a step by step guide. Do not skip ahead!
2. This process can take up to an hour if your system is not up to date.
 - Windows 7 installations should be very quick.
 - Vista and XP installs may require more time, due to additional Windows Updates.
3. This shouldn't be painful so if you find yourself spending more than a few hours trying to "figure it out", call or email us. We offer free support, take advantage of it.

Step 1 - Windows Updates

Make sure your computer has all of the available Windows Updates installed before continuing.

Step 2 - Install Guide

Open the Install Guide for reference. This is intended to be a step by step guide.

[CashFootprint Install Guide.pdf](#)

Step 3 - CashFootprint Install

Install the latest version of the unlimited CashFootprint™ Point-of-Sale trial. See our download page to obtain the latest version of the CashFootprint Setup.

<http://lothill.com/downloads>

Step 4 - Database Install

Install the SQL Server Express database software. This is what CashFootprint uses to store its data. Only install the 32-bit or 64-bit version, not both.

- To find out which type of system you have, check out the following pdf.
 - [32or64bit.pdf](#)
- 32-bit systems: [SQLEXPRT x86 ENU.exe](#)
- 64-bit systems: [SQLEXPRT x64 ENU.exe](#)

Step 5 - Link CashFootprint

The first time you start CashFootprint, you will be asked to select the **SQL Server instance**.

1. Click **Basic**.
2. A **Select Server** window will appear. Select the instance you just installed in **Step 4**. Click **OK**.

Step 6 - User Manual – I know, boring!

As painful as this sounds, take a few minutes to briefly read through the short User Manual. It will answer a lot of basic questions (page 5 specifically).
