

The FW-1200-P™

The FW-1200-P™ is the culmination of years of field operations, research, and development. It is unlike any other point-of-use water purification system on the market. This rugged, portable system offers:

- UV Dose Exceeds 40mj/cm²
- 1,200 gallons per hour
- Reconfigured Filtration
- Brand New Chassis

High Capacity Purification

The FW-1200-P is the workhorse of the First Water product line. With a daily production capability of 28,000 gallons, it can sustain most any community or large facility operation. Multiple FW-1200-Ps can work together to increase water production and meet even the most challenging operational demands.

The FW-1200-P is designed to function in permanent installations. It is ideally suited for community development projects or for use in facilities such as hospitals, schools or hotels.

The FW-1200-P combines innovative technologies in a highly deployable package to create a solution ideal for the developing world. Microbiologically safe water is produced with minimal power requirements and maintenance costs far less than other products on the market. It is an ideal solution for organizations already engaged in water projects across the world.

The FW-1200-P also excels in commercial applications for both ongoing and emergency use. Providing clean water to staff and clients is a major concern for many industries and can provide a significant competitive advantage. The FW-1200-P can operate as a single water distribution point or integrated into facility plumbing.

- Specifications
- Water Source: Fresh
 - Purification Rate: 20 gpm
 - Power: 120 V AC
 - Amperage: 15 amps
 - Effective to 0.019 microns
 - UV Dose Exceeds 40mj/cm²
 - Produces microbiologically safe water for human consumption
