

HIGH CAPACITY PURIFICATION

The FW-1200-M is the workhorse of the First Water product line. With a daily production capability of 28,000 gallons, it can sustain critical operations through most any water disruption event. Multiple FW-1200-Ms can work together to increase water production and meet event the most challenging operational demands.

The FW-1200-M is designed to function in both fixed facility and field operations. With a rugged aluminum frame and compact size, it is lightweight and easily transported in a SUV or van. It can be rapidly deployed around a hospital or campus as well as transported during emergencies to support field hospitals or base camps.

specifications	
Water Source	Fresh
Purification Rate	20 GPM
Pump	Onboard
Power	120 volt AC
Amps	15
Dimensions	40 x 24 x 32"
Weight	150 lbs
Testing Standard	EPA/NSF P238/241
