

Tuesday 4 June 2013 – Afternoon

AS GCE CHEMISTRY A

F322/01 Chains, Energy and Resources

Candidates answer on the Question Paper.

OCR supplied materials:

Data Sheet for Chemistry A (inserted)

Other materials required:

Scientific calculator

Duration: 1 hour 45 minutes

Candidate forename	Candidate surname	
Centre number	Candidate number	

INSTRUCTIONS TO CANDIDATES

- The Insert will be found in the centre of this document.
- Write your name, centre number and candidate number in the boxes above. Please write clearly and in capital letters.
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Answer all the questions.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Write your answer to each question in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.
- Do not write in the bar codes.

INFORMATION FOR CANDIDATES

The number of marks is given in brackets [] at the end of each question or part question.

Where you see this icon you will be awarded marks for the quality of written communication in your answer.

This means for example you should:

- ensure that text is legible and that spelling, punctuation and grammar are accurate so that meaning is clear;
- organise information clearly and coherently, using specialist vocabulary when appropriate.
- You may use a scientific calculator.
- A copy of the Data Sheet for Chemistry A is provided as an insert with this question paper.
- You are advised to show all the steps in any calculations.
- The total number of marks for this paper is 100.
- This document consists of 24 pages. Any blank pages are indicated.

Answer all the questions.

1	Crude o	il is a complex mixture of many hydrocarbons.
	Crude o	il is processed by the petroleum industry to make fuels and petrochemicals.
		e straight-chain alkane, A , is present in crude oil. as molecules with ten carbon atoms.
	(i)	What is the molecular formula of A ?
	(ii)	B is a branched-chain isomer of A.
		Draw the skeletal formula of a possible structure for B .
		Name your structure.
		name[2]
	(iii)	The branched-chain isomer B has a lower boiling point than the straight chain alkane A .
		Explain why.
		[2]
	(b) A (chemist heats a pure sample of $C_{15}H_{32}$ in the presence of a catalyst.
	A r	eaction called cracking happens.
	(i)	Construct an equation to show the cracking of $C_{15}H_{32}$.
		[1]
	(ii)	When cracking takes place, a large number of products are formed.
		Suggest why a large number of products are formed.

2 The skeletal formulae of six alcohols, C, D, E, F, G and H, are shown below.

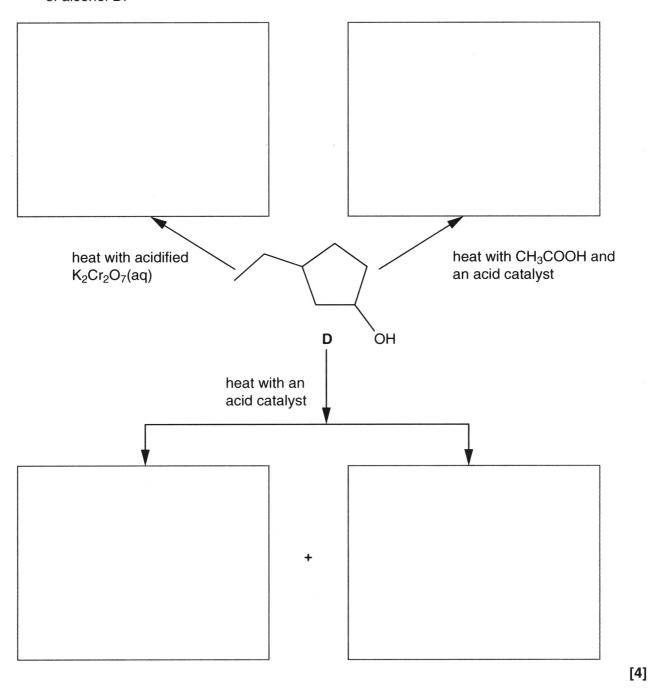

a)	(i)	Which two alcohols are structural isomers of one another?	
			[1]
	(ii)	Which alcohol is a tertiary alcohol?	
			[1]
	(iii)	Which alcohol can be oxidised to a carboxylic acid using acidified K ₂ Cr ₂ O ₇ ?	
			[1]
(b)	(i)	What is the molecular formula of alcohol G ?	
			[1]
	(ii)	What is the name of alcohol C ?	
			[1]
(c)	Th	e alcohols are members of a homologous series.	
	Ex	plain the term <i>homologous series</i> .	

© OCR 2013

* 3132848704 *

(d) Alcohol D is reacted with three different reagents.

Complete the flowchart below to show the organic product(s) formed in each of the reactions of alcohol **D**.

3 Compound I is found in biodiesel. It has the skeletal formula shown below.

(a)	Name the two functional groups that are present in a molecule of I .

(b)	Why is compound I unsaturated?	

	from to
	What colour change would you see?
(c)	A sample of compound I is shaken with aqueous bromine.

Compound J is a stereoisomer of compound I .		
(i) What is meant by the term stereoisomers?		

[1]
[1]

(ii) Draw or describe how the structure of ${\bf J}$ differs from that of ${\bf I}$.

...[1

		7
(e)	A st	udent determined the enthalpy change of combustion for compound I.
	In h	er experiment, 1.34 g of compound I was used to heat 50.0 g of water.
	The	temperature of the water changed from 20.2 °C to 54.0 °C.
	(i)	What is meant by the term enthalpy change of combustion, ΔH_c ?
		[2]
	(ii)	Calculate the energy released, in kJ, in the student's experiment.
		The specific heat capacity of water is $4.18 \mathrm{J}\mathrm{g}^{-1}\mathrm{K}^{-1}$.
		energy = kJ [2]
	(iii)	The molecular formula of compound I is C ₁₇ H ₃₂ O ₂ .
		Calculate the amount, in moles, of compound I used by the student.
		amount = mol [2]
	(iv)	Calculate the enthalpy change of combustion of compound I.

 $\Delta H_{\rm c} =$ kJ mol⁻¹ [3]

- 5 Nitrogen forms several oxides including N₂O₄, N₂O and NO.
 - (a) A rocket uses the reaction between N_2O_4 and methylhydrazine, CH_3NHNH_2 , equation 5.1, to release a large amount of energy.

$$4 \text{CH}_{3} \text{NHNH}_{2} \text{(I)} \ + \ 5 \text{N}_{2} \text{O}_{4} \text{(I)} \ \longrightarrow \ 4 \text{CO}_{2} \text{(g)} \ + \ 12 \text{H}_{2} \text{O(g)} \ + \ 9 \text{N}_{2} \text{(g)} \quad \text{equation 5.1}$$

Some enthalpy changes of formation, $\Delta H_{\rm f}$, are shown in the table.

Substance	$\Delta H_{\rm f}/{ m kJ}{ m mol}^{-1}$
CH ₃ NHNH ₂ (I)	+54
N ₂ O ₄ (I)	-20
CO ₂ (g)	-394
H ₂ O(g)	-242

Using the enthalpy changes of formation, $\Delta H_{\rm f}$, calculate the enthalpy change of reaction in equation 5.1.

© OCR 2013

* 3132848712 *

(b) Under certain conditions nitrogen reacts with oxygen to make N₂O.

$$2N_2(g) + O_2(g) \rightleftharpoons 2N_2O(g)$$
 equation 5.2

The enthalpy profile diagram for this reaction is shown in Fig. 5.3.

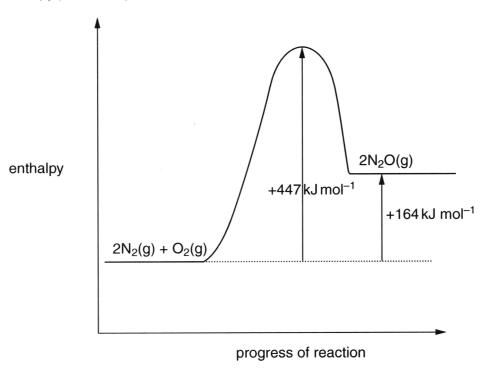

Fig. 5.3

(i) Calculate the enthalpy change when 240 dm³ of N₂O(g), measured at room temperature and pressure, is formed from N₂ and O₂.

enthalpy change = kJ [2]

(ii) What is the enthalpy change of formation, $\Delta H_{\rm f}$, of N₂O(g)?

 $\Delta H_{\rm f} =$ kJ mol⁻¹ [1]

8 Poly(propenenitrile) is used to make acrylic fibres for clothing.

Poly(propenenitrile) is a polymer manufactured from propenenitrile.

propenenitrile

(a) Draw a section showing two repeat units of poly(propenenitrile).

(b)	Explain why this manufacture of poly(propenenitrile) has a 100% atom economy.	

[1]

© OCR 2013

* 3132848720 *

(c) Propenenitrile is manufactured from propene as shown in the equation.

$$C_3H_6(g) + NH_3(g) + 1\frac{1}{2}O_2(g) \rightleftharpoons CH_2CHCN(g) + 3H_2O(g) \Delta H = -540 \text{ kJ mol}^{-1}$$

The conditions used are 450 °C and 2.5 atmospheres in the presence of a catalyst.

Describe and explain, using le Chatelier's principle, the effect on the position of equilibrium of the following changes:

- a temperature above 450°C
- a pressure above 2.5 atmospheres
- the absence of a catalyst.

in your answer you should link the effects you describe with your explanations.
