

Webinar of AI – for Manufacturing Industry

Date and time : 28 Jun 2022 (Tue)
SST 2:00pm / ICT 1:00pm / IST 11:30am (1 hour)

Location : Zoom

We are pleasure to invite you to our webinar of NEC's AI (Artificial Intelligence), "System Invariant Analysis Technology" (SIAT) which is developed for real-time monitoring for manufacturing industries.

Nowadays, many manufacturing companies face the limits of predictive monitoring by conventional threshold used method and started using AI. However, due to lack of human resources who handles AI and black-boxed algorithm processes of those AI, manufacturing companies face challenges to realize AI used monitoring.

NEC's AI has been developed to solve those challenges and we will have comprehensive explanation over the webinar. We are very sure that you will be interested in and satisfied if you have any challenges on you manufacturing process.

Target Industries

- Automotive
- Refinery and Petrochemical
- Steel
- Semiconductor
- Electronics
- Food and Beverage

Applications

- Prediction of machine failure
- Prediction of production quality
- Quality factor analysis
- Simulation
