

# Solar Garden Dog Solar Light

## Instruction Guide

### **PLEASE READ THE FOLLOWING PRIOR TO INSTALLATION**

IMPORTANT: This product contains a rechargeable Ni-CD/MH battery. Once the battery life is exhausted, the battery must be disposed or recycled properly according to your local laws. Please contact your local disposal or refuse collection agency for more information.

1. Turn the lantern upside and press down on the switch to turn the light on.
2. Install the solar light in an area that is free of any obstructions that may cause shading to the solar panels. **The light may not light up when placed near any light source. The darker the area is, the brighter it will be.** How long the unit lights up at night depends on the weather locations, conditions & sunlight availability.
3. Please allow 10-12 charge & discharge cycles to maximize battery life.
4. It is recommended that your battery be replaced every one (1) or two (2) years when the duration of light reduces significantly at night.
5. Battery replacement: Loosen the three screws with a Phillip screwdriver. Replace the battery; make sure not to break any wires. Align the cap to the on/off button and test to see if it will light up. After that, screw them back together.

\* **Unit doesn't light up:** Check to see if the battery is lined up correctly. If it still doesn't light up, change the battery with a working one. If it does not work, it is defective. **All the tests should be performed in a dark area to deactivate the built-in photo sensor.**

\***Unit lasts a couple hours at night:** Switch the place of installation to a sunnier one or change the battery.

**Solar lights must have a 6 to 8 hours of full sun in order to charge its internal rechargeable battery. On cloudy days, its charge will only be minimal, meaning it wont last very long. How long the unit lights up depends on the sunlight availability.**
