

#### Notes:

- The push buttons have 2 functions: short and long press (except PB3).
- The first time you use this radio, the initial values must be loaded into the EEPROM memory, with the following procedure: while pressing the PB2 button, turn on the Arduino power and it is ready to work.
- Caps C3, C4, C5, C6 are used to reduce the Arduino / SPI radio noise.

Si473x LW/MW/SW/CB AM/FM Stereo RDS Radio Receiver

PL102BA-S V2
