LE FEU

—

DEFINE FIRE

Le Feu is a Danish company established in 2017, which produces beautiful, contemporary fireplaces that are portable and eco-friendly. Le Feu provides a lifestyle collection, which combines an effective functional heating solution, with stunning choices of size and style for both indoor and outdoor living spaces.

“Hygge” - the Danish concept of creating warmth, connection and wellbeing is captured through the beauty of Le Feu fireplaces

Le Feu fireplaces features timeless Scandinavian design using the finest materials creating a highly functional solution to replace the traditional fireplace.

The beautiful smoke-free fireplaces from Le Feu require no ventilation and run purely on biofuel, making them clean and environmentally friendly as the flame radiates warmth and comfort throughout the room.

The classic simplicity of the collection offers smooth surfaces and stunning clean lines. The four models create a unique, flexible and practical heating solution for radiating warmth throughout a room.

le feu é

The three floor models GROUND WOOD, GROUND LOW and GROUND STEEL are light and portable, easy to move around the home as well as to an outdoor patio or deck. The dancing smoke-free flame from our fireplaces creates a beautiful atmosphere.

Our ground steel, ground wood and sky models provide a unique 3 in 1 user selectable option. The flexibility to inter-change and swap the wooden leg supports and modify the fireplace to use either the floor stands or ceiling pole, is an alternative display option. Additional accessories are sold separately.

Our fireplaces burn on pure bioethanol, which provides a clean and smoke-free fire and requires no ventilation or chimney, which makes them easy to install and operate.

BIOETHANOL

The fireplaces burn clean on bioethanol, which is alcohol produced by biomass to be used as fuel and has a clean combustion. The alcohol is produced by a sugar starch that usually comes from two different sources. 1. Generation bioethanol made of "edible" plants and 2nd generation bioethanol made from plant waste or straw. Through a fermentation process, you utilize the starch in the biomass, which is converted into bioethanol. Biofuels are a great environmentally friendly alternative to traditional solutions, because of its renewability and CO2 neutrality.

GROUND WOOD - SERIE

OAK

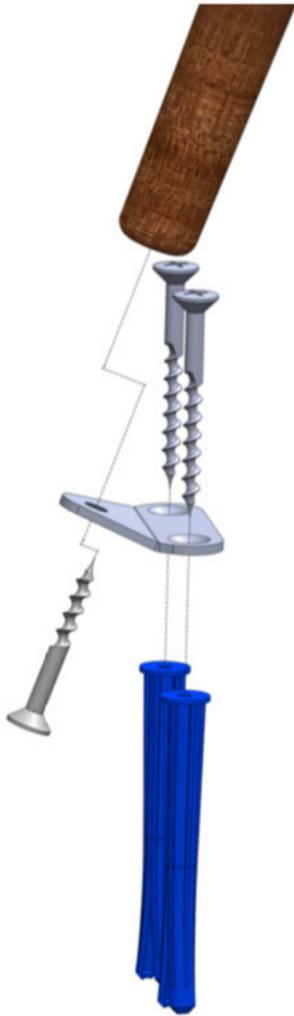

WENGE

GROUND Wood

Consists of a dome, a burner and a securing bracket made of 1,5 mm round plate in SS 304 stainless steel With 3 pcs. Ø 32 x 10 x 3 mm tube for wooden legs. As well as 3 pcs. wooden legs.
