- If you check "Yes" explain why by doing one of the following: verifying the three properties, describing it as the span of a set of vectors, the nullspace of a matrix, the range of a linear transformation etc...
- If you check "No" give an explicit example of the property that is not satisfied.

> In the following questions it is okay to use the notation $\vec{a}_i$ for the ith column vector of A, or $\vec{a}_i(r)$ for the ith row vector. Similarly, for B and C. For A^T you can use $\vec{a}_i^T$ and $\vec{a}_i^T(r)$.
