Bendmaster DLX Tremolo System

Bendmaster Tremolos are raised off of the guitar body. This permits wide changes in pitch both up and down.

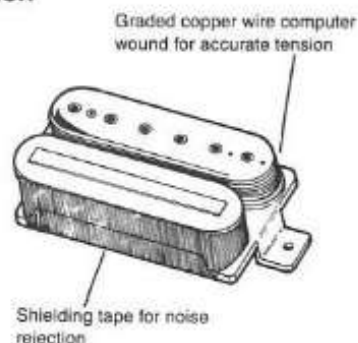

Neck Construction

Magnaflux Unbalanced Coil Pickup Construction

Most dual coil hum reducing pickups are designed so that the output of the "A" and "B" Coils are equal. Balanced. With unbalanced coils Coil "A" will have 50% more output than Coil "B." This gives you a wider frequency than on traditional dual coil pickups. In addition, when a coil tap is used, Coil "B" becomes the killed coil. This prevents the 50% volume loss when in single coil mode.

LIFETIME GUARANTEE: Gives you the confidence of owning a reliable instrument which will serve your needs for years to come.
