

Press Release

Maxdorf and Cologne, February 2012

Strong partners in the market: VOLTARIS and GreenPocket

The VOLTARIS GmbH offers municipal utilities and businesses intelligent and individual solutions for smart metering and smart home. In order to ensure the best results, VOLTARIS relies on a strong partner in the market: the software specialist GreenPocket delivers innovative web portal solutions and smartphone applications to visualize this process adequately. Both companies will present their solutions at this year's E-world energy & water from 7 to 9 February 2012 in Essen.

Price advantages for smaller municipal utilities

Especially for smaller municipal utilities the complex process solutions in the area of smart metering are cost-intensive and hard to finance. The cooperation between VOLTARIS and GreenPocket establishes financial advantages for the utility companies: „Within the scope of our cooperation with GreenPocket we can extend intelligent multi-client solutions as bundled offers to our customers. Of course, this also contains a certain price advantage. Thus, installing a modern and promising smart meter system becomes worthwhile for smaller municipal utilities“, Peter Zayer, CEO of VOLTARIS GmbH, emphasizes.

Reliable long-term partnership

Due to the highly complex smart meter infrastructure, utility companies rely on qualified and strong partners: „VOLTARIS Smart Metering is a solid and reliable bundled solution. It includes everything the customer needs: from supplying the smart meters to communicating the data and processing it for residential customers, businesses and customers with photovoltaic systems“, Dr. Thomas Goette, CEO of GreenPocket, explains. „All the more we are very happy that an expert such as VOLTARIS relies on us when it comes to the visualization“.

Karsten Vortanz, a further CEO of VOLTARIS GmbH, is also confident about this new cooperation: „The technological substance and innovative capacity are the reasons why we chose GreenPocket. At the moment you will not find anything comparable in the market. Our customers are also very satisfied with the visualization of the data. Both, the increasing demand for smart home solutions and the high download number of our new app confirm this.”

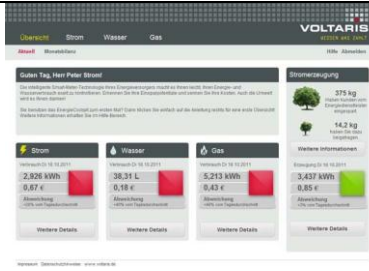

VOLTARIS and GreenPocket at E-world

While VOLTARIS Smart Metering transfers the digital consumption data from the smart meter into the EDM system and processes it, GreenPocket then interprets and visualizes the data in consumer-friendly applications. Of course, the system pays regard to all currently available data security and data protection standards. Thus, consumers can safely access their data via the VOLTARIS Webportal or en route via the [VOLTARIS Energy App](#) for iPhone, iPod touch and iPad. Amongst other things, consumers can also control heating and lighting individually. Both companies will introduce their intelligent solutions and their wide and innovative range of services at E-world energy & water 2012 in Essen.

About Voltaris

VOLTARIS is an expert for services in the areas of energy management, metering point operation and smart metering for network operators, distributors, industry and business. With the GM operator for WIM processes as well as various portal solutions for smart metering and smart home VOLTARIS offers the safest path into the future.

About Greenpocket

GreenPocket provides pioneering software for smart metering and smart home. Combining the best of the internet with the new world of smart energy, we enable utilities to significantly increase the energy efficiency of private households, businesses and municipalities. Founded in 2009, GreenPocket has quickly become a European player in the Smart Energy market. Next to several major European utilities, we have already signed up 30 renowned German utilities, such as Vattenfall Germany and the municipality utilities in Munich, Frankfurt, Berlin, Cologne, Bremen and Bonn. Since the company's foundation we have launched over 50 energy application projects. Today we are proud to say that we are Germany's leading software provider for consumer-orientated smart metering and smart home software.
