

SIEMENS

Do a little Lite reading.

WG5900-003 3576 © Siemens Medical Systems, Inc. 1990

Siemens introduces a new chapter in diagnostic imaging devices. Our high performance LiteBox™ helps you read through volumes of medical information quickly and efficiently.

Screen Gem.

Siemens LiteBox is one talented performer. It displays on-screen medical images and patient data the instant they are available from the imaging modality. And the LiteBox can be located anywhere! At a cross-town clinic. Up in ICU. Over in ER. In a physician's office. Or even with a specialist across the country.

All the Lite Stuff.

Our LiteBox communicates with all traditional imaging modalities, making it possible to review the results of multiple exams side by side. But why stop there. With Siemens LiteBox, you now have the capacity to reduce or magnify images. Pan, scroll or stack the images. Even view images in cine loop. And more.

No other introductory system leads the way to a PACS network so easily — or so affordably!

Get the whole picture. Call us at 908-321-4500. Or return the coupon provided.

I think you've lit upon a great idea!
