POWEROCKER

With the reinstatement of the tremolo effect to today's music, IBANEZ wanted to produce a tremolo bridge that was not only superior but an affordable standard option. Following in the principles of the Hard Rocker, the POWEROCKER utilizes a rounded joint surface for a smooth and durable rocking action. The rounded joint design relieves the stiff friction properties of metal to metal contact to provide a much more sensitive arm response.

PRO ROCK'R AND TOP LOK

Following our HARD ROCKER and POWEROCKER, IBANEZ R&D introduces you to the PRO ROCK'R tremolo system with confidence. The PRO ROCK'R possesses all the features demanded of today's tremolo systems including lock nut and fine tuners. Dual action allows use of tremolo from extreme pitch bends to the most sensitive vibrato. The tremolo arm itself has our fast snap in/snap out feature set nearer to the fulcrum, so arm control is smoother and softer. Through the use of a special washer, tremolo arm playing is extremely smooth. All metal to metal friction is eliminated. Another splendid feature of the IBANEZ PRO ROCK'R is its fine tuning system. This new system offers true fine tuning that is so accurate and so easy to use, you can even calibrate while playing. Together with the TOP LOK system, the PRO ROCK'R is a perfect device.

The new TOP LOK string clamping system is constructed of two pieces of top quality hardened steel which assures a solid hold once tightened. The TOP LOK system was designed so that neck adjustments can be easily made even with the clamp still in place.

ACCU CAST BII

The IBANEZ ACCU CAST BII bridge/tailpiece is a low mass design for full transition of string vibrations to the body. Each string rests firmly on the saddle for maximum sustain and rock steady response even with heavily percussive playing styles. String height is individually adjusted with a single screw.

PICKUPS

V5 The V5 is a radical humbucking design pickup featuring two Bar polepieces. The V5 offers state of the art design with the longest Bar face to balance each string. The V5's powerful magnetic field enables marvelous sustain and high output. With the wax-sealed coil and strong magnet the V5 produces a smooth and warm distortion covering the frequency from screaming highs to fat lows. In string bending, the IBANEZ V5 is a masterpiece of contemporary design, the sound never deteriorates, even in high speed playing.

SUPER J5S / J6 These high performance pickups have a balanced output to give you a smooth crisp sapping treble. The special shielding and mounts virtually eliminate hum and mechanical noise.

TEK GRIP KNOB

This original knob design features high-tech styling for the 80's. You can control it with a light smooth touch. Heavy-Duty non-slip finish guarantees the stability of operation.
