

# PROTECT YOURSELF

Each year vehicles incur damage and people suffer injuries and in some cases death, from mishaps with gate entry systems. To prevent these kind of accidents, or tragedies, and to minimize the potential for enormous liability, we wish to ensure that we offered you the following safety devices for your gate operating and entry.

## Swing Gate Site Layout Guidelines

## Slide Gate Site Layout Guidelines

### SAFETY LOOPS

A system typically installed underground creating a magnetic field to detect a vehicle in place. Once the safety loops detect the vehicle, the gate automatically reverses to prevent closing on the vehicle.

### SAFETY PHOTO EYE

A small device that carries a laser that beams across gate opening, if the laser beam is broken by someone walking by, a pet running through, or a vehicle driving through, the gate will automatically reverse to prevent any accidents.

### SAFETY RUBBER SENSORS

This rubber device is typically installed in the front and/or rear of gate. When minimal pressure is applied, gate will automatically reverse in position.
