CS604-Operating System

(Solved MCS's)

LECTURE FROM (23 to 45)

FOR MORE VISIT VULMSHELP.COME

JUNAID MALIK 0304-1659294

1is the separation of user logical memory from physical memory.
a. physical memoryb. ROM
d. one of the given
2. When the address used in the program gets converted to an actual physical RAM address is called
a. Execution
b. loading
c. compiling
d. Address binding pg#151
3. The set of all Logical address generated by a program from of the process.
a. process address space
a. Physical address space pg#155
b. logical address space
c. none of the given
4. 1 KB is equivalent to
a. 10 bytes
b. 100 bytes
c. 1000bytes from Google
d. 1024 bytes
5Page replacement algorithm suffers from Belay's anomaly.
a. LIFO
b. FIFO pg#199
c. MRU
d. LRU
6points to the smallest memory address of a process.

- a. Limit register
- b. Base register pg#10 Base register it holds the smallest legal physical memory address for a process
- c. Stack register
- d. None of the given
- 7. In system, the user space contain one process at a time because only one process is executing at given time
- a. Multi programmed
- b. Batch pg#5
- c. Time-sharing system
- d. None of the given
- 8..... wastes CPU cycles and hence a problem in real multiprogramming system.
- a. Busy Waiting pg#111
- **b.** Semaphore
- c. Critical Section
- d. Mutex
- 9. A new process is called by the system call
- a. exit
- b. fork pg#36
- c. wait
- d. exec
- 10. The address generated by the CPU after any indexing or other addressingmode arithmetic is called address and the address it gets translated by MMU is calledaddress. relp.con
- a. Virtual, physical pg#153
- **b.** Hexadecimal, Binary
- **c.** Valid, Virtual
- **d.** Physical, Virtual
- 11..... is single program that produces an object file.
- a. Linker
- b. Compiler pg#86
- c. loader
- d. text editor

LE SCHULL D IN 10 III C I E GROCI
12. In frame allocation scheme free frames are equally divided
among processes.
a. Fixed pg#205 or Fixed Allocation
b. Proportional
c. Priority
d. All of the given
TITOTT
13. Named pipes giveflow of data by default.
a. half-duplex pg#46
b. full-duplex
c. both half and full duplex
d. none of the above
14 Is the variation of frok system call in several Unix operating
system used for virtual memory.
a. vfrok() pg#194
b. wfrok()
c. afrok()
d. bfrok()
15. In scan algorithm the disk starts at one end of the disk, and moves towards other end, servicing requests as it reaches each cylinder, until it gets to the other end of the disk.
a. arm pg#245
b. cylinder
c. head
d. none
16. The problem of Deadlock can be solved by method(s).
a. Deadlock prevention
b. Deadlock avoidance
c. Allowing Deadlock
d. All of the given Google
 a. Deadlock prevention b. Deadlock avoidance c. Allowing Deadlock d. All of the given Google
17. In, each file is a finked fists blocks may be scattered anywhere on
the disk.
a. Indexed Allocation
b. Contiguous Allocation
c. Linked Allocation pg#235
d. none of the above

<u></u>	71	D-JUMALD INSTITUTE GROUD
		enables process to communicate with each other. Directory
		FIFO pg#218
		Linked File
	d.	Ordinary File
	a. b. c.	In
	u.	
Č.		. If validation bit 0, it indicates a/an state of segment.
	0. 3	protected
		shared
		legal pg#178
	u.	inegal pg#176
	21.	. In technology, memory is divided into several fixed-size parties.
		swapping
		overlays "14.60
		Multiprogramming with Fixed Task(MKT) pg#160 Multiprogramming with Variable Task(MVT)
	u.	With programming with variable Task(WVT)
	22	Automatically holds for printer and other non-sharables.
	a.	Hold and Wait
	b.	Circular Wait
	c.	Mutual exclusion pg#132
	a.	no preemption
	23.	. In page replacement algorithm oldest frame is replaced with
		another.
	a.	LIFO
		FIFO pg#119
		LRU
	d.	Optimal
	24.	. When alink is created, a directory entry for the existing file is created.

<u>AL-JUNAI D INSTITUTE GROUP</u>

- a. Hard pg#225
- b. Soft
- c. soft and hard
- d. hard or soft
- 25. In case of thrashing if CPU utilization is too low the operating systemthe degree of multiprogramming.
- a. Increase pg#208
- b. Decrease
- c. Increase or Decease
- d. None
- 26. Which one of the following is correct syntax to copy file 1 to file 2?
- a. cp fie2, fie1
- b. cp file1/file2 Pg#27
- c. cp file2 file1
- d. cp file1 file2
- 27 is/are a memory management scheme that supports programmer's view of memory.
- a. paging
- b. segmentation pg#176
- c. All of the above
- d. demand paging
- 28keeps in memory only those instructions and data that are needed at any given time.
- a. paging
- b. swapping
- c. overlays pg#156
- d. fragmentation
- 29. The bottom layer in the layer in the layered approached of Operating System is.
 - a. user interface
 - b. hardware pg#20
 - c. kernel
 - d. none

71	L-JUMALD INSTITUTE GROUI
a. b. c.	The process of switching from one process to another is called context switching pg#34 Scheduling quantum periods latency
a. b. c.	Assume the logical address space of 16 pages of 1024 word, each mapped into physical memory of 32 frames. Each word consists of 2 bytes. what will be the total number of bits to require for the P (page number) 4 bits pg#166 8 bits 16 bits 32 bits
V	is the based on the locality of reference concept at least frequency used page is not on the current locality Least Frequently Used algorithm pg#204
d.	
a. b. c.	High-level synchronization constructor that allows the safe sharing of an abstract data type among concurrent process is called
35.	Preemptivescheduling is sometimes called Shortest-remaining-time-first scheduling a. FCFS(First-Come-First-Served) b. Round-Rubin c. Shorted Job First Pg#83

32.

 a. Context switching b. Dispatching c. Swapping d. Tracking 	
 84. rm and [r]mkdir commands are used todirectory. a. Create b. Move c. Remove pg#30 d. Modify 85. Utilities used for system administration (halt, ifconfig, fdisk, etc.) are 	stored
indirectory. a. /dev b. /boot c. /lib d. /sbin pg#27	Stored
86. In Linux directory structure, there isroot directory. a. 1 pg#26 b. 2 c. 3 d. 4 87. I/O instructions are Privileged Instructions.	
a. True pg#12 b. False	
 88. Command-line interpreter is also called in some operating systems. a. Kernel b. Shell Pg#16 c. Signal d. API 89. The major advantage of multi-programming system is a. More than one jobs can be processed at a given time b. CPU utilization can be increased Pg#8 c. Jobs can be completed quickly 	
d. All of the options are correct90. The Operating system is a layer of software betweenan	d
a. Hardware, software application pg#21	

b. Kernel, hardware
c. Dos, Windows
d. Windows, Kernel
91. Linux OS can support multiple users at a time
a. <mark>True pg#9</mark>
b. False
92is also called Swapper.
a. Swap space
a. Swap space b. Medium term scheduler pg#37 c. Short term scheduler d. Long term scheduler
d. Long term scheduler
d. Long term scheduler
93. The performance of Round Robin algorithm does NOT depends heavily or
the size of the time quantum.
a. True pg#89
b. False
94 Scheduler selects the process from the job pool and put them in
main memory.
a. Long term pg#36
b. Short term
c. Medium term
d. Swapper
95. The main characteristic of a Real time system is
a. Efficiency
b. Large Virtual Memory
c. Large secondary storage device
d. Usability google
W ₁
96. A time sharing system is
a. Multitasking
b. Interactive
96. A time sharing system is a. Multitasking b. Interactive c. Multi user d. All of these pag#9
d. All of these pg#9
97. You can terminate a foreground process by pressing
a. <ctrl-a></ctrl-a>
b. <ctrl-c> pg#69</ctrl-c>
c. <ctrl-z></ctrl-z>
d. None of the given options
7 · · · · · · · · · · · · · · · · · · ·

98. You can use the command to display the status of suspended and
background processes
a. fg
b. bg c. <mark>jobs pg#68</mark>
d. kill
d. Kili
99. The manual pages can be read in Lenux Using command.
a. <mark>man pg#27</mark>
b. wan
c. desc
d. help
100. A program in execution is called a
a. Command
b. Process pg#31
c. Software
d. Compiler
Current working directory can be accessed using Command.
a (dot)
b. # (hash)
c. / (slash)
d. \sim (tilt) pg#25
102. Mkfifo() is a
a. <mark>Library Call pg#58</mark>
b. Command
c. Directory d. None of Above 103. command gives a snapshot of the current processes.
d. None of Above
W.VIII 1 al D.
103command gives a snapshot of the current processes.
103command gives a snapshot of the current processes.
a. <mark>ps pg#66</mark>
b. top
c. who
d. ls
104. Time interval when the I/O Devices are accessed is known as
a. CPU Burst

b.	IO Burst google
c.	Time Slice
d.	None of Above
105.	Directory includes essential system boot files including the
	ernel image.
	/bin
b.	<mark>/boot pg#26</mark>
c.	/dev
d.	/etc
106.	IPC provides a mechanism to allow processes to communicate and
to	
a.	Address space pg#46
No. of Section 1	Address Name
c.	Address ID
d.	None of all these
107.	Each process must first request permission to enter its critical section.
T	the section of code implementing this request is called the
	entry section pg#100
	Critical Section
	remainder section
	None of all these
u.	None of all these
108.	The interval from the time of submission to the time of completion is
th	
u	
a.	Turnaround time pg#83 Waiting time Response time
b.	Waiting time
c.	Response time
	None of all these
109.	You can create a threads by using the pthread_create() call.
a.	True pg#64
D.	False
110.	Typically the execlp system call is used after a fork system call.

AL-JUNAI D INSTITUTE GROUP a. True pg#39

a. Tue pgnor	
b. False	
111. A solution to the critical section problem must satisfy the following requirements	
a. Progress	
b. Mutual exclusion	
c. Bounded Waiting	
d. All of these pg#101	
112. Inaddressing, the recipient is not required to name the senderal. Symmetric	r.
b. Asymmetric Pg#47	
c. Both symmetric and asymmetric	K
d. None of the given options	0
113. The process id returned to the child process after successful fork	Ç
system call execution is.	
a. <mark>0 Pg#40</mark>	
b. 1	
c. 2 d. 3

115. Ais an integer variable that, apart from initialization is	
accessible only through two standard atomicoperations: wait and signal.	
a Comanhara na#111	
a. Semaphore pg#111b. Monitor	
c. Critical region	
d. Critical section	
116. In Resource Allocation Graph, APi →Rj indicates that process	

HIMAI D INCTITUTE CDAUD

L-JUNAI D		IL GROUP	
Pi may request resource	Rj at sometime in the fu	ture.	

a. Claim edge pg#1	<mark>138</mark>
--------------------	------------------

- b. Request edge
- c. Assignment edge
- d. Allocation edge
- In pages segmentation, the logical address is legal if d is segment 117.
 - a. < (less then) Pg#180
 - b. > (greater than)
 - c. = (equal to)
- 118. The ----- scheme is not applicable to a resource allocation system with multiple instances of each resource type.
 - a. Wait for graph Pg#148
 - b. Resource allocation graph
 - c. Both Resource-allocation and wait-for graph
 - d. None of the given options
- A semaphore that cause Busy-Waiting is termed as 119.
 - a. Spinlock Pg#113
 - b. Monitor
 - c. Critical region
 - d. Critical section
- 120. The condition in which a set {P0, P1... Pn} of waiting processes must exist such that P0 is waiting for a resource that is held by P1, P1 is waiting for a resource that is held by P2, and so on, Pn-1 is waiting for a resource held by Pn, and Pn is waiting for a resource held by P0. This condition is known as.
 - a. Mutual exclusion
 - b. Hold and wait
 - c. No preemption
 - Pg#131 d. Circular wait
- Preventing a condition of _____to happen, deadlocks can be 121. prevented to happen.

AL-JUNAI D INSTITUTE GROUP
a. Critical region
b. Circular wait Pg#136
c. Monitors
d. Critical section
 What do we name to an address that is loaded into the memory address register of the memory? Logical address Physical address Pg#155
c. Binary addresses
d. None of the given options123 register contains the size of the process
 a. Base register b. Index register c. Limit register Pg#13 d. Stack pointers register
 124. If the system can allocate resources to each process in some order and still avoid a deadlock then it issaid to be in state. a. Safe Pg#137
b. Un-Safe
c. Mutual
d. Starvation
125Algorithm is used in Deadlock avoidance.
a. Bakery
 a. Bakery b. Banker's Pg#139 c. Mutual exclusion d. Safe Sequence
c. Mutual exclusion
d. Safe Sequence
126. refers to the situation when free memory space exists to
load a process in the memory but the space is not contiguous.
a. Segmentation
b. Internal fragmentation
c. Swapping
d. External Fragmentation Pg#165

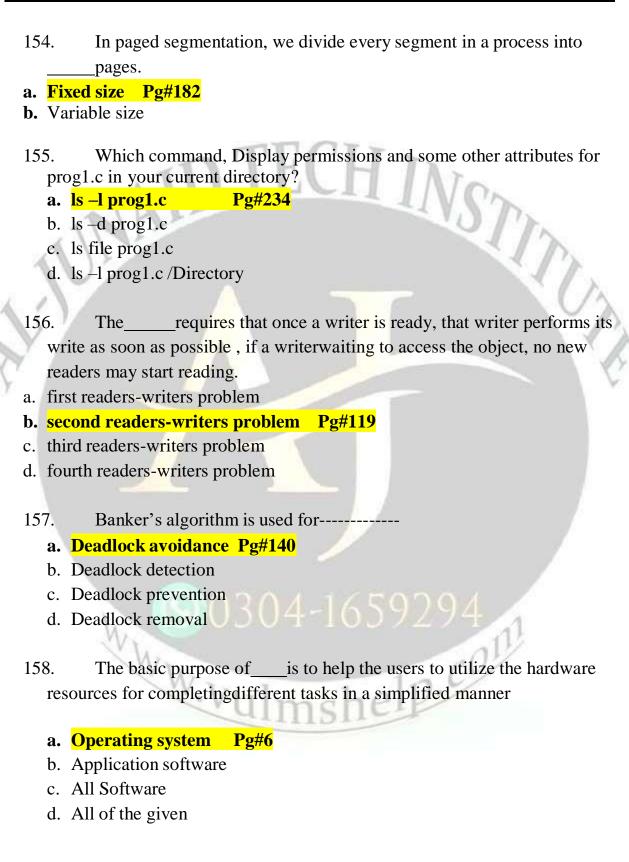

12	7.	The main criteria of page replacement in optimal
	pa	ge replacement algorithm is to
	a.	Replacement that page will not be use for the longest period of time
		Pg#199
	b.	Replacement that page will be required most frequently in the execution of process
	c.	Replace the page which is biggest in size
12	8	When the process tries to access locations that are not in
ā	7 10	emory, the hard traps the operating system. This is called as
a.		ge fault Pg#188
b.	Pa	ge replacement
c.	Pa	ging
d.	Se	gmentation
12	9.	The pager is used in connection with
a.	De	emand paging Pg#186
b.	Pa	ging
c.	Se	gmentation
d.	Pa	ge segmentation
13	0.	Segmentation is a memory management scheme that support?
a.	Pr	ogrammer's view of memory Pg#175
b.	Sy	stem's view of memory
c.	На	one of the given
d.	No	one of the given
		W. VI-1 1 2 D.
13	1.	The segment table maps thethe physical addresses.
a.	Pa	ge addresses
b.		ared page addresses
C.		ne-dimensional logical addresses
d.	17	vo-dimensional logical addresses Pg#175
13	2.	Point to the page table.
9	Tr	anslation look-aside buffers

- <u>AL-JUNAI D INSTITUTE GROUP</u> b. Page offset c. Page-table length registers (PRLR) d. Page-table base registers (PTBR) Pg#166 _is used in the detection and recovery mechanism to handle 133. deadlocks. a. Wait-for graph Pg#144 **b.** Resource allocation graph c. Circular graph d. Claim edge graph Address Binding will be at____in multiprogramming with fixed tasks 134. (MFT) a. Rub time b. Load time Pg#160 c. Dynamic time d. None of the What do we name to an address that is generated by CPU? 135. a. Logical address Pg#152 **b.** Physical address c. Binary address **d.** None of the above 136. Secondary storage memory devices have _____memory. a. Volatile google b. Permanent and nonvolatile c. Temporary d. None of the given The collection of process that is waiting on the disk to be brought into 137. the memory for execution forms the... a. Input queue Pg#154 b. Output queue c. Both of the
 - d. None of the above

138. is a segment of code that accesses a shared resource
like data structure or device that must not beconcurrently accessed by
more than one thread of execution.
a. Multithreading
b. Context switching
c. Critical section Pg#105
d. Pipelining
139. Use of semaphore create a problem of busy waiting, this wastes CPU
cycles that some other process may beable to use productively. This type of
semaphore is also called
a. Semaphore S
b. Spinlock Pg#112
c. Locking
d. Semaphore Mutex
140. Using hardware solution to synchronization for complex problems, introduce a new synchronization tool known as
a. Test And Set
b. Semaphore Pg#111
c. Swap
d. Trap
u. 1.up
141. Batch programs are usuallyprograms.
a. Interactive
c. Foreground
d. Preemptive
b. Non-interactive Google c. Foreground d. Preemptive Algorithm is used for solving a process critical section
142Algorithm is used for solving n-process critical section
problem.
a. Bankers
b. Bakery Pg#105
c. Babbles
d. None of the given

143. The integer value ofsemaphores can range over an unrestricted integer domain.a. Counting Pg#117
b. Binary
c. Mutex
d. Bounded buffer
144is a preemptive scheduling algorithm.
a. First Come First Serve
b. Shortest Job First
c. Round Robin Pg#89
d. None of these
145. The priority of a process can be changed usingcommand.
a. nice Pg#94
b. cmd c. Cat
d. Grep
146. Removing the possibility of deadlock in dining philosopher problem
does not ensure the problem will not occur.
a. Mutual Exclusion
b. Starvation Pg#123
c. Critical Section
d. Bounded Buffer
147 Eventure Communication in a seriest On which
147. In producer-Consumer problem synchronization is required. On which
shared area this synchronization actually effect.
a. Counter b. Buffer google
c. Entry section
d. Exit section
 148. Typically monitor, a high-level synchronization tool is characterized by and a. Global variable, local

- b. variableSignal, wait
- c. Local data, programmer defined operators Pg#125
- d. Local variables, semaphores
- 149. Following is not the classical problem of synchronization.
 - a. Bounded buffer problem
 - b. Reader writer problem
 - c. Dining philosophers' problem
 - d. Counting Semaphore problem Pg#118
- 150. Consider a scenario in which one process P1 enters in its critical section, no other process is allowed to execute in its critical section. This is called
 - a. Mutua exclusion Google
 - b. Context switching
 - c. Multithreading
 - d. Progress
- 151. The Swap instruction which is the hardware solution to synchronization problem does not satisfy the condition, hence not considered to be a good solution.
 - a. Progress
 - b. Bounded waiting Pg#109
 - c. Mutual exclusion
 - d. None of the given
- 152. The logical address of Intel 80386 is
 - a. 36 bits
 - b. 48 bits Pg#185
 - c. 64 bits
 - d. 128 bits
- 153. Intel 80386 used paged segmentation with __level paging.
 - a. One
 - b. **Two Pg#185**
 - c. Three
 - d. Four

AL-JUNAI D INSTITUTE GROUP
is used to store data on secondary storage device, e.g., a source
program(in C), an executable program.
a. Block Special File
b. Link File
c. Ordinary File Pg#220
d. Directory
TO THE HITA.
160. indicates size of the page table
a. translation look-aside buffers
b. Page-table length register (PTLR) Pg#169
c. Page-table base register (PTBR)
d. Page offset
161. The set of all physical addresses corresponding to the logical
addresses is a of the process
a. Physical address space Pg#155
b. Process address space
c. None of the given options
d. Logical address space
Deadlocks can be described more precisely in terms of a directed
graph called a system
a. Directed graph
b. Critical path
c. Resource allocation graph Google
d. Mixed graph 163. Withyou use condition variables. a. Semaphores b. Road/Write Locks
163. Withyou use condition variables.
a. Semaphores
b. Read/Write Locks
c. Swaps

d. Monitor Pg#126

164. buffer places no practical limit on the size of the buffer

a. Bounded

- b. Unbounded Pg#44)
- c. Both Unbounded & bounded
- d. None of the given options

165. spend more time doing IO than computations

- a. short CPU bursts
- b. CPU bound processes
- c. IO bound processes Pg#32
- d. None of the given options
- 166. You can display the contents (names of files and directories) of a directory in UNIX/Linux directory structure with the command.
 - a. 1
 - b. s
 - c.ls **Pg#28**)
 - d. none of the given options
- 167. The critical section problem can be solved by the following except
- a. Software based solution
- b. Firmware based solution Pg#101
- c. Operating system based solution
- d. Hardware based solution
- 168. A modification of free-list approach in free space managment is to store the addresses of n free blocks in the first free block. Known as _.

relp.con

- a. counting
- b.linked list
- c.bit vector

d.grouping Pg#243

- 169. In deadlock detection and recovery algorithm, a deadlock exists in the system if and only if the wait for graphcontains a
 - a. Cycle Pg#147
 - b.Graph

c. Edge	
d.Node	
170. Inpage replace algorithm we will replace the page that has not	
been used for the longestperiod of time.	
a. counter based	
b.Least Frequently Used	
c.FIFO	
d.LRU Pg#202	
didito 19/202	
171. Overlays are implemented by the	
a. Operating system	
	K.
<pre>b.Programmerpg#159 c. Kernel</pre>)
	þ.
d.Shell	C
172. If a process continues to fault, replacing pages, for which it then faults	
and brings back in right away. This highpaging activity is called.	
a. paging	
b. thrashing Pg#210	
c. page fault	
d. CPU utilization	
173. Themethod requires each file to occupy a set of contiguous block	ζS
on the disk.	
 a. Contiguous Allocation pg#236 b. Linked Allocation c. Indexed Allocation d. None of the given options 	
b. Linked Allocation	
c. Indexed Allocation	
d. None of the given options	
174. a way to establish a connection between the file to be shared and the	
directory entries of the userswho want to have aces to this file.	
a.Link pg#231	
b.Directory	
c. Common Group	

d.Access Permission

175	is used to request the OS by the process to take an I/O or
init	tiating child process.
a.	System call
b.	Interrupt
c.	Trap
d.	Signal
176.	You can use the my file1 file2 command to move
	file1 to file2.
-	file 2 to file 1
	this command will not work for moving files
	None of the option is correct.
()	
177.	commands in Linux is used to copy file
a.	Is
b.	cp
c.	mv
d.	mkdir
178. U	Jser mode can run the Privileged instructions.
	True True
b.	False
	The manual pages can be read in Linux usingcommand.
	man
	wan desc
	desc :
	help
100	Swapper is also termed as Short term scheduler. 1
180.	Swapper is also termed as Short term scheduler.
b.	
181. F	
as i	the process is created.
а. b.	
c.	3
d.	4
u.	

182. Shared libraries and kernel modules are stored indirectory.
a. /bin
b. /dev
c. /boot
d. <mark>/lib</mark>
183. Thesystem call suspends the calling process. a. fork
b. wait pg#42
c. exec
d. exit
184. The hardware mechanism that enables a device to notify CPU is called an
a. <mark>Interrupt google</mark>
b. Signal
c. Trap
d. Process
185. A(or an <i>exception</i>) is a software-generated interrupt caused either by an error (division by zero or invalid memory access) or by a user request for an operating system service a. Interrupt
b. Trap (Page 7)
c. Signal
d. Process
186. Which register holds the smallest legal physical memory address for a process?
a. Base register (Page 13)
b. Limit register
c. Status register
d. None of the given options
a. Base register (Page 13) b. Limit register c. Status register d. None of the given options
187. The semaphore provides mutual exclusion for accesses to
the buffer pool and is initialized to the value 1.
a. mutex (Page 118)
b. binary
c. couting
d. none of the given options

188. Binary semaphores are those that have only two values a. 0 and n b. 0 and 0 c. 0 and 1 (Page 117) d. None of the given options	
 189. Addresses generated <i>relative</i> to part of program, not to start of physical memory are a. Virtual b. Physical c. Relocatable d. Symbolic 	
 190. Object files and libraries are combined by a program to produce the executable binary a. Compiler b. Linker c. Text editor d. Loader 	
191. Physical memory is broken down into fixed-sized blocks, called and Logical memory is divided into blocks of the same size, called a. Frames, pages (Page 165) b. Pages, Frames c. Frames, holes d. Holes, segments	-
192. A page table needed for keeping track of pages of the page table is called a. 2-level paging b. Page directory (Page 173) c. Page size d. Page table size 193. Each page is a power of bytes long in paging scheme. a. 2 b. 3 c. 4 (Page 167) d. 5	

- 194. Which part of the computer system helps in managing the file and memory management system?
- a. Operating System (Page 5)
- **b.** Device Drivers
- c. Application Software
- **d.** Hardware
- **195.** Which of the following is correct definition for wait operation?

```
a. wait(S) { (Page 111) while(S<=0) ;// no op S--; }
```

- b. wait(S) {
 S++;
 }
- c. wait(S) {
 while(S>=0)
 ;// no op
 S--;
 }
- d. wait(S) {
 S--;
 }
- 196. Wrong use of wait and signal operations (in context with semaphores) can cause_____problem(s).
 - a. Mutual Exclusion
 - b. Deadlock
 - c. Bounded Waiting
 - d. All of the given options are correct
- 197. If a system is not in a safe state, there can be no deadlocks.
 - **a.** True
 - b. False (Page 137)
- 198. An acyclic graph does not allow directories to have shared

L-JUMAI D	<u> </u>	<u>UIIU</u>	$\mathbf{U}\mathbf{I}$
subdirectories and files.			

- **a.** True
- b. False (Page 225)
- 199. The size of pages and frames are same in logical memory and physical memory respectively.
 - a. **True** (Page 165)
 - **b.** False
- 200. Intel is basically designed for following Operating Systems except
 - a. MULTICS (Page 182)
 - **b.** OS/2
 - c. Windows
 - **d.** Linux
- 201. Following is NOT true about Virtual memory.
 - a. Virtual memory help in executing bigger programs even greater in size that of main memory.
 - **b.** Virtual memory makes the processes to stuck when the collective size of all the processes becomes greater than the size of main memory.
 - **c.** Virtual memory also allows files and memory to be shared by several different processes through page sharing.
 - **d.** Virtual memory makes the task of programming easier because the programmer need not worry about the amount of physical memory,
- 202. The execution of critical sections must NOT be mutually exclusive
 - a. True
 - b. False (Page 100)
- 203. The integer value of _____semaphores can not be greater than 1.
 - a. Counting
 - b. Binary (Page 117)
 - **c.** Mutex
 - **d.** Bounded buffer
- 204. Starvation is infinite blocking caused due to unavailability of resources.
 - **a. True** (**Page 115**)
 - **b.** False

205.	Progress and Bounded Waiting are some of the characteristics to solve
the	critical section problems.
a.	True (Page 101)
b.	False
206.	The requires that no reader will be kept waiting
	ess a writer has already obtained permission to use the shared object.
	first readers-writers problem (Page 119)
	second readers-writers problem
- 46	third readers-writers problem
a.	fourth readers-writers problem
207.	The process of holding at least one resource and waiting to acquire
add	litional resources that are currently being held by other processes is
	own as
	Mutual exclusion ()
	Hold and wait (Page 131)
	No preemption
d.	Circular wait
is to	The condition where a set of blocked processes each holding a cource and waiting to acquire a resource held by another process in the set, ermed as Deadlock (Page 130)
	Starvation
~•	
209.	A program cannot execute unless whole or necessary part of it resides
in t	he main memory.
a.	True
b.	False
	True False
210.	In the C-Scan and C-Look algorithms, when the disk head reverses its
	ection, it moves all the way to the other end, without serving any requests,
and	then reverses again and starts serving requests.
a.	True (Page 249)
b.	False
211.	The following requirement for solving critical section problem is
kno	own as

"There exists a bound on the number of times that other processes are allowed to enter their critical sections after a process has made a request to enter its critical section and before that request is granted."

	to enter their critical sections after a process has made a to enter its critical section and before that request is granted.
a. Pr	rogress
b. <mark>B</mark>	Bounded Waiting (Page 101)
	Iutual Exclusion
d. C	ritical Region
	ATT THE HITTE
212. Th	ne section of code after the critical section is called
a. Cryst	tal section
<mark>b. Entry</mark>	y section
c. Rema	ainder section
d. Exit s	section
213. A ₁	process is said to be in critical section if it executes code that
manipula	ates shared data.
a. True	e (Page 100)
b. False	
214	an integer variable accessible through wait and
_	hich are atomic operations.
	aphore (Page 111)
b. Mute	
_	waiting
d. Signa	al
	oftware solution to critical section problem can run only in
environm	
	iprocessor UDU4-1007274
	tithreading
	rocessor
a. Separ	rate address spacing
	ulmsheir
216	integer shows the highest priority of a process in CPIL
216	niteger shows the ingliest priority of a process in CPO
schedulir	
a. <mark>Smal</mark>	<u> </u>
b. Large	
217 Ca	acha is non volatila mamory

217. Cache is non-volatile memory.

a.	True
b.	False (Page 153)
218.	is used due to un-used space in fixed size blocks/ pages.
<mark>a.</mark>	Internal fragmentation
b.	External fragmentation
c.	Paging
d.	MVT
219.	Fragmentation when using ICMP for path MTU should be avoided.
<mark>a.</mark>	True
b.	False
11	
220.	Variable name areaddress.
a.	Physical
b.	Reloadable
c.	Relative
d.	Symbolic
221.	is caused due to un-used in physical memory.
a.	Internal fragmentation
b.	External fragmentation
c.	Paging
d.	MVT
222.	The run-time mapping from virtual to physical address is done by a
pie	ce of hardware in the CPU, called the
a.	Memory management unit (MMU) (Page 155)
b.	CDI I cabadular
c.	Registers None of the above Main memory ismemory. Volatile memory
d.	None of the above
	W I I I I I I I
223.	Main memory is memory.
a.	Volatile memory
b.	Non-volatile
c.	Permanent
d.	Virtual
224.	An optimal page-replacement algorithm has the lowest page fault rate
of a	all algorithms.

a.	True (Page 199)
b.	False
225.	In, the library files are linked at load time.
	tic linking
	namic linking
a. b. c.	In swapping technique of Memory Management, the total amount asfer is directly proportional to theamount of the memory swapped amount of space on backing store space on main memory all the given options are correct
227.	We want a page replacement algorithm with the
N 3 3	ge-fault rate.
a.	Lowest (Page 198) Highest
_	In a UNIX system, system call can be used to request the rating system to memory map an opened file. nmap() (Page 195)
229.	The main memory is usually divided into two partitions, one forand other for
a.	resident operating System, User processes (Page 158)
a sy seg	A section of code or collection of operations in which only one cess may be executing at a given time, is called critical section. Considerate containing n processes {P0, P1, 2,, Pn }. Each process has a gment of code called a N-Process Critical Section Problem
_	Semaphore S is a/antype of variable to use as achronization tool. Integer (Page 111)
232.	In order to remove the problem like busy waiting, some high level

synchronization constructs are defined. What are they?

a. Critical regions and Monitors (Page 124)

233.	In instruction TestAndSet mutual exclusion implementation is done
-	declaring a Boolean variable lock
a.	Initialized as false (Page 109)
	We can use semaphores to deal with the number of process critical section problem.
a. n-p	rocess critical section problem
235. a.	Linux is a version ofoperating system. OS/2
b.	Windows
c. I	<mark>Unix</mark>
d. l	None of the above
Y /	
236.	scheduling algorithm is sometimes called shortest
	naining time first scheduling algorithm.
	Non-preemptive SJF
	Priority Scheduling
	Preemptive Shortest Job First (Page 85)
d.	FCFS
237.	Preemptive scheduling is sometimes called shortest
	naining-time-first scheduling.
	First-Come-First-Served (FCFS)
	Round-Robin
	Sorted Job First (SJF) (Page 85)
	Priority Pri
	W ₁
238.	OS helps manages the following except Application software Bus speed of the system Memory
a.	Application software
b.	Bus speed of the system
c.	Memory
d.	Virtual memory
239.	/usr/X11R6 is used by the X Window System.
	True (Page 27) False

<u>AL-JUNAI D INSTITUTE GROUP</u>
240. /opt is used for storage of large applications.
a. True (Page 27)
b. False
241. The Home Directory for superuser in Linux and Unix is
a. /home
b. /root (Page 27)
c. None of the given
242. Linux Treats Devices as Files.
a. True (Page 26)
b. False
243. An absolute pathname starts with the root directory (/) and a relative
pathname starts with your home directory.
a. True (Page 25)
b. False
244. We can install and run multiple OS by using VMWare.
a. True
b. False
245. Mach, MacOS X Server, QNX, OS/2 and Windows NT are examples
of OS Based on
a. Layeredb. Micro Kernal (Page 22)
c. Virtual Machine
d. None of The Given
0. 0.0004-1659294
246. In Layered Approach of OS, the Layer highest Layer is User Interface
layer.
a. True (Page 21)
a. True (Page 21) b. False
247. Operating System is the Manager of Hardware Resources.
a. True (Page 6)
b. False

248. An operating system is a control program that manages the execution of user programs to prevent errors and improper use of a computer. a. True (Page 6)
b. ► False
 249. The bottom-up view is that operating system is a resource manager who manages the hardware and software resources in the computer system. a. True (Page 6) b. False
250 determines What will be done.
a. Mechanism
b. Policy (Page 24)
c. Mechanism and Policy
d. None of the given
251. copy file1 file2 is an example of OS view.
251. copy file1 file2 is an example of OS view. a. Top down (Page 6)
b. Bottum Up
or Bottom op
 252. The Top-down view is that it is a program that acts as an intermediary between a user of a computer and the computer hardware, and makes the computer system convenient to use. a. True (Page 6) b. False
253. The Purpose of Operating System is to generate Executable Programs
and tothem.
a. Regenetrate
b. Execute (Page 5)
c. Stored. Remove
u. Remove
 b. Execute (Page 5) c. Store d. Remove 254. Users are the People, machines or a computer that uses the Hardware
resources.
a. True (Page 4)
b. False

255. Database, Complier, Video games are examples of		
a. Hardware		
b. Application (Page 4)		
c. Operating System		
d. Users		
256. Hardware provide basic computing resource.		
a. True (Page 4)		
b. False		
257. The missisies of management the angular management fixed		
257. The priorities of processes in the group remain fixed.		
a. Kernel (Page 93)		
b. User		
258. The process of switching from one process to another is called		
latency.		
a. True		
b. False (Page 34)		
b. Tube (Tuge 51)		
259. In Unix/ Linux, by default the standard input file is attached to the		
a. Mouse		
b. Keyboard (Page 55)		
c. Light pend. Joystick		
u. Joystick		
260. The nice value helps in assigningto a process.		
a. Priority (Page 94)		
h. Weight		
c. Time		
c. Time d. Scheduling		
Winds		
261. You can use the rm file1 command tofile1		
a. Retrieve		
b. Remove (Page 30)		
c. Make		
d. modify		
262. The correct command for compiling C program named program.c in		
Linux environment is		
a. gcc program.c –o FirstPrgram (Page 31)		

	gee – This i Togram program.e		
c.	gcc –z FirstProgram program.c
