NAID TECH INSTITUTE

rea

aw diffinishing that to continue after a certain level of performance has been				
iche	ched will result in a decline in effectiveness. This law is known as:			
a. <mark>I</mark>	Law of Diminishing returns	HO page 6		
b.	Law of effectiveness			
c.	Law of Saturation			

2. Build and Fix model is a_ type of software development activity.

- a. Mathematical
- b. Perfect
- c. Haphazard (haphazard mean: lacking any obvious principle of organization.)
- d. Planned
- 3. In a team is structured along a traditional hierarchy of authority
 - a. closed paradigm HO page 32

d. Law of Marketing returns

- b. synchronous paradigm
- c. random paradigm
- d. open paradigm
- MTTC is the abbreviation of
 - a. measured time to change
 - b. mean time to collaborate
 - c. mean time to change
 - d. measure time to cope
- 5. The rapid application development model is
 - a. Another name for component-based development.
 - b. A useful approach when a customer cannot define requirements clearly
 - c. A high speed adaptation of the linear sequential model. HO page 19
 - d. All of the given
- 6. When a software is delivered to a client and then client reports the bug in it then that bug is termed as

a.Error

- b. Defect
- c. Mistake
- d. Fault
- 7. A redesigned business process must be prototyped before it is fully integrated Into the business.
 - a. . False
 - b. . True

8. In order to measure the design quality, if the frequency of ripple defects is too
large, then it means that there is tight coupling and hence the
a. design is maintainable
b. design is not maintainable HO page 79
c. design has completed
d. none of the given
9. The only reason for an estimate to be unreliable is lack of experience related to the
application on the part of the estimator.
a. <mark>true</mark>
b. false
10. A consideration of software scope must include an evaluation of all external
Interfaces.
a. <mark>true</mark>
b. false
11. If an error related to requirements is identified in testing phase, so this error will
be considered as an error inphase.
a. Design
b. Code
c. Requirement
d. Testing
12. Usually the performance of the organization change over-night.
a True
<mark>b False</mark>
13. Following are the benefits of conducting review except
a Help in finding the size of the project
b Helps in verifying the quality of product
c. Help in identifying where improvement is required.
d Helps in identifying the bugs in the work product
14. There could be multiple GUIs to satisfy one requirement
a True
b False (1) (1) (1) (4) (1) (4) (4) (4) (4) (4) (4) (4) (4) (4) (4
15. Which one of the following describes the data and control to be processed,
Function, performance, constraints, interfaces, and reliability?
a Product Quality
b Software scope estimation HO page 80
c. Resources requirements
d Time requirements
16. Miscommunication among project staff is one of the reasons of the failure of the software
project
<mark>a.True</mark>
17. Reliability of a software is a
a functional requirement
b. <mark>. non-functional requirement</mark>

cDesign Requirement
d. None of the given
18. The formal methods model of software development makes use of mathematical
Methods to
a. define the specification for computer-based systems
b. develop defect free computer-based systems
c. verify the correctness of computer-based systems
d. all of the given
19. Water fall model is a document driven model.
a. True
I. Esta
20. Spiral model hasdimensions. a. 2 HO page 20 b. 3
a. 2 HO page 20
b. 3
c. 4
d. None of the above
21. Themodel of software development is a good approach when core product is
required quickly.
a. Incremental HO page 18
b. Linear Sequential
c. Prototyping d. None of the above
task coordinators. a. Controlled Decentralized
task coordinators.
task coordinators. a. Controlled Decentralized
task coordinators. a. Controlled Decentralized b. Democratic Decentralized HO page 32
task coordinators. a. Controlled Decentralized b.Democratic Decentralized HO page 32 c. Controlled Centralized d. Synchronous paradigm 23. In software development is performed at the end of each phase.

		c. All of the given
		d. user, along

	58technique was initially developed for manufacturing processes in the 1920's by
	Walter Shewart.
	a. Upper Control Line
	b. Control chart Ho page 75
	c. CMP
	d. Quality
59.	Every task should be assigned to a specific team
	a. Member HO page 93
	b. Manager
	c. Organizer
	d. None of the given
60.	Which one is not the Software project planning activity carried out by the project manager for
	estimation?
74	a. Software scope estimation
	b. Resources requirements
6. 1	c. Time requirements
. 1	d Product Quality HO page 80
61.	While performing risk analysis, the impact of risk cannot be measured quantitatively
AA	a True
Y	b False
62.	Degree of uncertainty that the product will meet its requirements and be fit for its intended
	use is the
	a. Cost risks
	b. Schedule risks
	c Performance risks HO page 87
60	d. None of the given choices
63.	The number of people required for a software project is determined
	a. After an estimate of the development effort is made.
	b. From an assessment of the technical complexity of the system.
	c. by the size of the project
<i>C</i> 1	d. all of the given
64.	Defect Removal Efficiency (DRE) can be measured by where E is Errors found delivery and
	D is error found after delivery (typically within the first year of operation) a. DRE= E/(E+D) HO page 69 b. DRE= E - (E+D) c. DRE= E * (E+D) d. None of the given Integrity means that the software should
	a. <mark>. DRE= E/(E+D) </mark>
	c DRE= E * (E+D)
	c DRE= E * (E+D) d None of the given
65	Integrity means that the software should
03.	a help the users to enjoy usability
	b none of the given
	c withstand the attack from a hacker HO page 67
	d help the hacker to hack the system
	a. There are induced to make the system

66.	In func	tion point analysis technique EO stands for
	a.	. Export operation
	b.	. Export output
	c. <mark>. I</mark>	External output 'HO page 49
	d.	. None of these
67.	Which	of these software characteristics are used to determine the scope of a software project?
	a.	. context, Lines of code, function
	b.	. context, function, communication requirements
	c.	information objectives, function, performance HO page 34
	d.	. communications requirements, performance, information objectives
68.	In	a team is structured loosely and depends on individual initiative of the team
	membe	
	a. <mark>. r</mark>	r <mark>andom paradigm HO page 32</mark>
	b.	. closed paradigm

Y	c. Quality attribute
	d. Process
111.	A provides a quantitative value of some attribute of a process or a product.
	a. Metric
	b. Measure HO page 65
	c. Function point
110	d. Plan
112.	Estimation of the is a prerequisite for all sorts of estimates, including,
	resources, time, and budget.
	a. Software Plan
	b. Software Scope HO page 80
	c. Software Product
112	d. Software Size
113.	activity is performed throughout software production
	a. Maintenance
	b. Development
	c. Analysis
114	d. Quality Assurance HO page 25
114.	is an object-oriented lifecycle model.
	a. Spiral modelb. Extreme programming
	o. Extreme programming

	c. Waterfall model
	d. Fountain model HO page 23
115.	In controlled centralized structure communication between team leader and the
	members is
	a. horizontal
	b. linear
	c.vertical HO page 32
	d. circular
116.	Effective software project management focuses on the four P's: These are
	a. People, Product, Process, Problem
	b. People, Product, Process, Project HO page 29
	c. People, Passion, Process, Project
	d. People, Passion, Planning, Project
117.	Softwarerelates individual software measures to provide a normalized view.
	a. Measure
2	b. Metric HO page 65
1	c. Plan
	d. Attribute
118.	A process model defines a task set which comprises of SE work tasks, milestones and
1	a. Work Breakdown Structure
	b. Coding
	c. Deliverables HO page 95
	d. Design
119.	Each process defines certain deliverables known as the
	a. work products HO page 12
	b. software
	c. final product
	d. items
120.	FAST is a team-oriented approach to requirement gathering, the term FAST stands
	for:
	a. Fast Application Security Technique
	b. Facilitated Application Specification Techniques page 80
	c. Fact Associated Special Talk
	d. Field Applied Science Technique
121.	is fundamental for providing mechanisms for objective evaluation of any
	process or activity.
	a. Metrics
	b. Measurement HO page 65
	c. Indicators
	d. Pointers
	AL-JUNAID INSTITUTE OF GROUP

122.	is the ability to encourage people to create and feel creative.
	a. Organization
	b. Motivation
	c.Innovation HO page 30
	d. Managerial Identity
123.	Inthere is both vertical and horizontal communication.
	a. Controlled decentralized (CD) HO page 32
	b. Democratic decentralized (DD)
	c. Controlled centralized (CC)
	d. Synchronous paradigm (SP)
124.	Certain reusable software components were to be developed by a/an having no
	knowledge of its internal design standards.
	a. In-house
- 3	b. Quality Assurance Team
	c. 2nd party
4 1	d. <mark>3rd party HO page 89</mark>
125.	1 1
N	known as statistical control techniques.
14	a. Graphically HO page 74
Y	b. Automatically
	c. Manually
	d. Personally
126.	
	is called
	a. Efficiency HO page 67
	b. Integrity
	c. Reliability
105	d. Portability
127.	Which statement is correct?
	a. Coupling does not depend on interdependency be we components
	b. The greater the dependency between the components the lesser is coupling
	c. The lesser the dependency between the components the greater is coupling
120	d. The greater the dependency between the components the greater is coupling
128.	Hardware / Software tools, People and Reusable software components are considered
	asfor an Organization
	a. Resources HO page 81
	b. Quality Factors
	c. Risky Factors
	d. Requirement Specifications

	AL-JUNAID INSTITUTE OF GROUP
129.	Requirements are sometimes fill with defects, normally known as
	requirements.
	a. Functional requirements
	b. Non-Functional requirements
	c. Toxic requirement My Point
	of View
	d. System requirements
130.	The major activities related to software construction are:
	a. Requirement gathering, design development, coding and testing (pg8)
	b. installation and training
	c. quality assurance, configuration and planning
	d. implementation and management
131.	Which of the following is not a software measure?
	a. No. of defects
6 1	b.Defects per function point My Point of View
1	c. Lines of Code
Y	d. Non Function points
132.	Capability Maturity Model (CMM) haslevels
y	a. 4.
	b.5 H O page 12
	c. 3
	d. 2
133.	model is a haphazard type of software development activity.
	a. Water fall
	b. Incremental
	c. Prototyping
124	d. Build and Fix (haphazard mean: lacking any obvious principle of organization.)
134.	The conceptual interface between the 'internal application and the external' user world
	is known as
	a. Count Data Functions
	b. Application Boundary HO page 42c. Development countd. Control Information
	c. Development count d. Control Information
125	
133.	Every project has a defined number of staff members. As time allocation occurs, the project manager must ensure that no more than the allocated number ofhas been
	scheduled at any given time.
	a Task

b.People

c. Days

d. Components

HO page 93

136.	files are the logical files that the customer understands and must be
	maintained by the system.
	a. Raw
	b. External
	c. Logical
	d. Internal HO page 42
137.	Lifecycle models appreciate the need for iteration within and between
	phases.
	a. Object-Oriented HO page 23
	b. Spiral Model
	c. Extreme Programming
	d. Rapid Application Development
138.	dimension of Spiral model represents the cumulative cost to
	date a. Radial HO Page 20
^	b. Angular
2	c. Horizontal
1	d. Circular
139.	If the gap between the defects reported and defects fixed is decreasing, then it means
N	that the product is incondition.
1	a. Defective
	b. Unstable
	c. Neutral
	d. Stable HO page 78
140.	Inteam organization, there is no permanent leader rather
	there are task coordinators
	a. Democratic decentralized HO page 32
	b. Controlled decentralized
	c. Synchronous paradigm
	d. Controlled centralized
141.	Caper Jones divided software related activates intodifferent categories.
	a. 35
	b. 40
	c. 20
	b. 40 c. 20 d. 25 HO page 7 Software Process and product quality are controlled at
142.	Software Process and product quality are controlled at
	a. Level 1
	b. Initial level
	c.Level 4 HO page 12
	d. Level 3

143.	The conceptual interface between the 'internal' application and the 'external' user
	world is known as
	a. Count data Function
	b. Application Boundary HO page 42
	c. Development Count
	d. Control Information
144.	Which of the following is not related to 'software project planning'
	a. Risk Analysis and planning
	b. Resources requirement
	c. Software configuration management HO page 80
	d. Software scope estimation
145.	The extent to which a program can be reused in other applications is called
	a. Reliability
- 5	b. Performance
	c. Usability
4 1	d. <mark>Reusability HO page 68</mark>
146.	is the measure of how many defects are removed by the quality assurance
V	processes before the product is shipped for operation.
M	a. Removal Deficiency
4	b. Defect removal efficiency HO page 69
<i>y</i>	c. Bag Report
y	c. Bag Report d. Bug Tracking Algorithm
147.	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization
147.	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency
147.	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance
147.	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity
	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d.Maturity HO page 12
	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d. Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for
	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d.Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for a. Universal natural process line
	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d.Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for a. Universal natural process line b. Universal natural process unit
	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d. Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for a. Universal natural process line b. Universal natural process unit c. Upper natural process unit
148.	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d.Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for a. Universal natural process line b. Universal natural process unit c. Upper natural process unit d. Upper natural process limit HO page 77
	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d.Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for a. Universal natural process line b. Universal natural process unit c. Upper natural process unit d. Upper natural process limit HO page 77 In model user feedback is received very quickly because product is delivered
148.	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d. Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for a. Universal natural process line b. Universal natural process unit c. Upper natural process unit d. Upper natural process limit HO page 77 In model user feedback is received very quickly because product is delivered in small version
148.	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d. Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for a. Universal natural process line b. Universal natural process unit c. Upper natural process unit d. Upper natural process limit HO page 77 In model user feedback is received very quickly because product is delivered in small version a. Waterfall
148.	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d. Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for a. Universal natural process line b. Universal natural process unit c. Upper natural process unit d. 148.	c. Bag Report d. Bug Tracking Algorithm Capability Maturity Model (CMM) is used to judge thelevel of an organization a. Efficiency b. Performance c. Productivity d. Maturity HO page 12 In context of moving range and individual control chart ,UNPL stand for a. Universal natural process line b. Universal natural process unit c. Upper natural process unit d. Upper natural process limit HO page 77 In model user feedback is received very quickly because product is delivered in small version a. Waterfall

150.	The primary difference between an internal logical file and an external interface file is that is not maintained by the application being counted a. ILF
	b. RET
	c. DET
151	d. EIF HO page 42
151.	Once the higher management has devised the mitigate strategy, the project must be
	monitored for this
	a. Particular Task
	b. Particular Requirement
	c. Particular schedules
150	d. Particular risk
132.	MOI model of leadership was developed by
- 4	a. Weinberg Page 30
	b. Newton
61	c. Don Carlos
150	d. Edison
153.	Empirical models are statistical models and are based upon
(7.	a. Historic data HO page 81
Y	b. Control data c. Current data
	d. Statistical
151	
154.	Onlyof the software components scheduled for reuse will, in fact beinto
	the application. The remaining functionality will have to be custom developed. a. 70%, integrated HO page 89
	b. 100%, integrated HO page 89
	c. 80%, excluded
	d. 90%, integrated
155	For a project, if value of TSS is > 2.4, then the degree of rigor for this project will be:
133.	a. Casual
	b. Structured
	c. Strict HO page 98
	d. Semi-Structured
156	Risk Analysis and management involves addressing the following concerns except
150.	a. What options do we have for each risk
	b. What can happen if the web interface of the company's website will change
	HO page 84
	c. What change might cause the risk to strike
	d. What thing may go wrong in future
	6 J 6- ··

157.	
	aspect of the process.
	a. Horizontal Ho page 24
	b. Angular
	c. Vertical
	d. Regular
158.	In the context of statistical models, COCOMO stands for:
	a. Computer Company Model
	b. Commutative Conduct Model
	c. Constructive Cost Model HO page 81
	d. Conductive Cold Model
159.	is necessary to learn from the mistakes and for the improvement of the
	process continuously
9	a. Risk analysis
	b. Good decision
6 1	c. Improvement
1	d. Postmortem analysis HO page 35
160.	is the ability to encourage technical people to produce to their
7	best.
Y	a. Improvement
	b. Motivation HO page 30
	c. Innovation
	d. Creation
161.	In context of degree of rigor, TSS stands for
	a. Time set selector
	b. Tasks set in schedule
	c. Task set selector HO page 96
	d. Time set in schedule
162.	In context of moving range and individual control charts, UCL stands for:
	a. Universal Control Line
	b. Universal Control Limit
	c. Upper Control Line HO page 76 d. Upper Control Limit Which of the following is a Software Metric? a. No. of defects b. Lines of Code
	d. Upper Control Limit
163.	Which of the following is a Software Metric?
	a. No. of defects
	o. Lines of Code
	c. Defects per function point HO page 65
	d. No. of function points
164.	Construction activities are directly related to theof the software.
	a. installation

	b. risk analysis
	c.development HO page 8
	d. debugging
165.	The size of software can be measured by using
	a. No. of Items
	b. No. of classes
	c. Functional points HO page 65
	d. No. of methods
166.	Defect removal efficiency is calculated as
V	Vhere
E	E = errors found before delivery
Γ	O-errors found after delivery (typically within the first year of Operation)
	a. $DRE = ExE.D$)
10	b. DRE = E-D
	c. DRE = E.DE
4 1	$d. \frac{DRE = E/(E+D)}{HO \text{ page } 69}$
167.	deadline is one of the reasons of project failure
N	a. Achievable
MA	b. Feasible
}	c. Unrealistic HO page 92
	d. Realistic.
168.	Reel has definedsteps process to improve the chances of success.
	a. 3
	b. 4
	c.5 HO page 35
1.60	d. 8
169.	If an employee number which appears twice in an ILF/EIF,
	count the DET
	a. twice
	b. thrice c.once HO page 45
	c.once HO page 45
170	d. null
1/0.	d. null Effort required to test a program to ensure that it performs its intended function a. Testability HO page 68 b. Bug fixing
	its intended function a. Testability HO page 68
	b. Bug fixing
	c. Debugging
	d. Security
171.	
1/1.	a. Answers
	a. Anowers

	b. Questions HO page 35	
	c. Points	
	d. Steps	
172.	After passing through all the stages of the software development when we deploy the	
	new system at the user side that stage is called	
	a. Integration	
	b. Development	
	c. installation	
	d. Status quo HO page 10	
173.	Model is very sensitive to the	
	risk a. Spiral HO Page 21 b. Waterfall c. Incremental d. RAD	
	Page 21	
	b. Waterfall	
1	c. Incremental	
		λ
174.	Formula for the risk exposure (RE) is given by	
1	a. RE = probability of the risk /Cost	1
Y	b. RE = Probability of Risk * Cost HO page 89	9
7	c. $RE = (Probability of risk + cost) / 2$	
y	d. RE = Probability of the risk + Cost	
175.	Anis a user identifiable group of logically related data or control	
	nformation referenced by the application	
	a.EIF HO page 42	
	b. Object	
	c. ILF	
4	d. Item	
176.	dentify the true statement	
	a. Same process metrics may vary from project to project (HO page 75)	
	b. Process metrics never vary from project to project	
	c. Process metrics applied on one project cannot be applied on other	
177	d. Fixed number of process metrics are applied for every project	
1//.	The extent to which a program can be expected to perform its intended function with	
	required precision is called	
	a. Usability b. Reliability HO page 67 c. Portability	
	b. Reliability HO page 67	
	c. Portability	
170	d. Maintainability	
178.	The most common way to determine the information needed to define Project scope	
	s to	
	a. Perform a market analysis to determine potential customers	
	b. Build a software prototyping and show it to the customer	

	c. Examine historical project data form similar application
	d. conduct a preliminary meeting with the customer HO page 80
179.	The most famous of empirical models is the COCOMO- constructive cost model –
	model. It also has many different version, which one is the simplest of these version?
	a. $E = (3.2 / KLOC) + 1.05 + A$
	b. $E = [LOC \times 0.333/P]3 \times (1/t4)$
	c. $E = A + B * (ev) C$
	d. $E = 3.2 \text{ (KLOC)}^{1.05}$ HO Page 81
180.	Barry Boehm has suggested a systematic approach to project management which is
	known as
	a. W5HH Principal HO page 35
	b. W3HH Principal
	c. WHH Principal
10	d. 5W5HH Principle
181.	A mock up application is developed inmodel to get user feedback
1 1	a. Waterfall
1	b. Objected oriented
V	c. Fountain
74	d. Rapid prototyping HO page 17
182.	Identify the most appropriate statement:
	a. The quality of the software specification is of extreme importance (pg: 71)
	b. The nonfunctional requirements can be skipped
	c. The nonfunctional requirements does not impact the quality of product
	d. The quality of software specification is of no importance
183.	In context of moving range and individual control chart ,LNPL stand for
	a. Least natural process line
	b. Least natural process limit
	c. Lower natural process unit
	d. Lower Natural Process limit HO page 77
184.	
	a. Stability My Point of Vierw
	b. Quality c. Performance d. Consistency
	c. Performance
185.	Software project management primarily deals with metrics related to productivity and
	a. Quality HO page 65
	b. Efficiency
	c. Reliability
	d. Compatibility

186.	If the gap between the defects reported and defects fixed is increasing, then it means					
	that					
	a. The product is in status quo					
	b. The product is near deployment					
	c. The product is in unstable condition HO page 78					
	d. The product is in stable condition					
187.	Which of the following is a software measure?					
	a. No. of test cases per function point					
	b. No. of defects					
	c.Defects per function point HO page 65					
	d. No of defects per KLOC (Kilo lines of code)					
188.	Software has very close relationship with					
	a. Biology					
- 5	b. Physics					
-	c. Chemistry					
1 1	d. No of defects per KLOC (Kilo lines of code) Software has very close relationship with a. Biology b. Physics c. Chemistry d. Economics HO page 5					
189.	LOC is heavily dependent on the					
V	a. No of document pages					
M	b. No of objects					
y	c. No of GUIs					
	d. Programming Style HO page 37					
190.	Software engineering is the set ofto develop software					
	a. Classes, Objects					
	b. Languages, processes					
	c. Processes, tools HO page 4					
	d. Tools, objects					
191.	Which of the following is not software metric?					
	a. Defects per function point					
	b.No of test cases per function points Conceptual					
	c. No of defects					
	d. No of errors per thousand lines of code					
192.	"Never worrying about problems unit they are occurred", this statement is related to					
	risk Management Philosophy a. Proactive b. Reactive HO page 84 c. Productive					
	a. Proactive					
	b. Reactive HO page 84					
	c. Productive					
	d. Effective					
193.	For a software the total number of requirement are equal to					
	a. Functional requirements					
	b. Nonfunctional requirements					

	c. Fu	nctional requir	ement + Nonf	unctional req	uirements	HO page 71
	d. Do	main requirem	ents			
194.	In con	text of "individ	lual control cl	nart", if a sing	gle metrics valu	e lies outside UNPL it
	means	that:				
	a. Th	e process has b	een matured			
	b. Th	e process in no	t mature yet			
	c. <mark>Pro</mark>	cess is out of c	ontrol		HO page 77	
	d. Pro	ocess is within	control			
195.	Contro	ol charts are of	following two	types:	T Tr .	
	a. <mark>Mo</mark>	ving range con	trol charts an	<mark>d individual c</mark>	control charts	HO page 75
		oving range co	10 10 10	10 1 TO 1	1 10 10 7.55	10.
		dividual contro	10 /			V. 1 77.

	d.	Processed				

201.In o	con	text of individual control chart if a single metrics value lies outside UNPL it
;	a.	Within the control
1	b. <mark>O</mark>	ut of the control HO page 77
(c.	Normalized
	d.	Not normalized
202.In o	con	text of function point analysis EQ stands for
;	a.	External quotation
į	b.	External inquiry
(c.	External quality
•	d.	External interface
203. The	e pu	rpose of feasibility analysis is to determine
;	a.	Can we use the available state of the art?
	b.	Can we implement the given standard?
1	c.	Cn we meet the design constraints?
1	d.	Can we build software to meet the scope? HO page 81
		of the following questions is not addressed when the W5HH principal is
app	olie	1?
y /	a.	What will be done by whom? HO page 35
4	b.	Why is the system being developed?
, /	c.	Where are the organizationally located?
	d.	How much of each resource is required?
		of the following are advantages of using LOC (line of code) as a size oriented
me	tric	
	a.	LOC is easily compiled
V	b.	LOC is language dependent measure
	c.	LOC is language independents measure
	d.	LOC can be computed before a design in completed
206.A g	3000	d metric system is the one which is
;	a.	Simple
1	b.	Cheap
	c.	Adds a lot of value for the management
		ll of the given options HO page 78
207.		r a project, if value of TSS is >0.9 then the degree of rigor for this project will
be:		W 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
	a.	Strict or structured
	b.	Strict
	c.	casual HO page 98
• • •	d.	Structured
208.	Co	ntrol charts are of the following two types:
	a.	Moving range control charts and Stable control charts

- c. Independent control charts and Stable control charts
- d. Individual control charts and Stable control charts
- 209. Formulae for total number of Channels of communication involving N people is given by
 - a. C = N(N-1)
 - b. C = N(N+1)*2
 - c. C = N(N+1)
 - d. C = N(N-1)/2

HO page 95

- 210. Risk mitigation involves
 - a.Reducing the risk management plan

My Point of View

- b. Reducing the contingency plan
- c. Performing the risk analysis again
- d. Reducing impact of risk
- 211. If we plot a graph between defects reported and defects fixed then
 - a. This graph will show that the defect detection process is not accurate
 - b. We cannot draw any information from that graph
 - c. This graph will show that some requirements are ambiguous
 - d. Difference between defects reported and fixed will show the defects your to
