What will be the output of the program below?

```
#include <iostream.h>
```

```
main()
```

```
{
```

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Made by: Waqar Siddhu

```
main()
{
    int i = 2;
    int j = 3;
```

Answer ([Please click here to Add Answer](#))

VuAnswers.com

Made by: Waqar Siddhu

```
int k = 2 * ++i * j++;
```

```
cout<<k;
```

```
}
```

Made by: Waqar Siddhu

Is it possible using operator overloading to change the behavior of - (minus operator) on integers? Justify your answer.

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

Given is the code for nested classes.

```
class First  
{  
    public:
```

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

Write a program which defines a Template function named Add () which adds two variables and then returns the sum. Define two variables of type **double** in main function, and then call Add () function on these variables.

Program output should look like this:

Enter two double values to be added

Answer (Please [click here](#) to Add Answer)

A rich text editor toolbar with various icons for editing text, including undo, redo, bold, italic, underline, bulleted list, numbered list, link, unlink, and a zoom dropdown set to 100%.

Made by: Waqar Siddhu

Write a program that calculates the area of a circle. You have to declare two variables for this, one is area and other is radius. Take the value of radius from the user.

Hint: Area of circle = $3.14 * \text{radius} * \text{radius}$ /

Given is the code of a class Matrix.

```
class Matrix
{
private:
int Elements[3][3];
```

Answer (Please [click here](#) to Add Answer)

Made by: Waqar Siddhu

What should be typical sequence of steps while overloading an assignment operator?

Answer (Please [click here](#) to Add Answer)

Made by: Waqar Siddhu

```
{  
private:  
int Elements[3][3];  
};
```

Write the operator function of Insertion operator (<<) for this class.

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

Enter two double values to be added

Enter First value:

12354.23

Enter Second value:

2563.25

Answer (Please [click here](#) to Add Answer)

Made by: Waqar Siddhu

Enter Second value:
2563.25

Addition of two variable of double data type
Sum = 14917.5

Answer (Please [click here](#) to Add Answer)

Made by: Waqar Siddhu

```
class Second
{
    public:
        void Display()
```

Answer (Please [click here](#) to Add Answer)

Made by: Waqar Siddhu

```
};  
{  
    cout<<"inner Object called...";  
}  
};
```

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

}

};

};

Write main() function to create an object of inner class and then call its function Display().

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

Enter Second value:
25
Addition of two variable of different data type
Sum = 37

What is returned by new operator?

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

Explain the meaning of given C++ statement: `const int *ptr = &x;`

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

Write main types of operators based on number of operands they take?

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

Write down the meaning of given below line of code, where m is an object of class Matrix

```
if( &m != this)
```

Answer (Please [click here to Add Answer](#))

A rich text editor toolbar with various icons for editing text, including undo, redo, bold, italic, underline, and list creation. The font is set to Arial, size 12, and the zoom level is 100%.

Made by: Waqar Siddhu

If we initialize an array as given below then how much memory will be allocated to the array "name" and why?

```
char name [] = "Hello World";
```

Answer ([Please click here to Add Answer](#))

Made by: Waqar Siddhu

What will be the output of the following code snippet?

```
int x = 10;  
int &y = x;  
y+=5;  
cout << x;
```

Answer (Please [click here to Add Answer](#))

A rich text editor toolbar with various icons for editing text, including undo, redo, bold, italic, underline, and font color. The font is set to Arial, size 12, and the zoom level is 100%.

Made by: Waqar Siddhu

Read the given below code and explain what task is being performed by this function

```
Matrix :: Matrix ( int row , int col )  
{  
    numRows = row ;  
    numCols = col ;  
}
```

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

Write a program which defines a Template function named **Add ()** which adds two variables and then returns the sum. Define two variables of type **int** in main function, and then call Add () function on these variables.

Program output should look like this:

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

Explain the logic of given program and write down its output.

```
#include <string.h>
#include <iostream.h>

int main()
```

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

Given is the code for a class String.

```
class String {
```

```
    private:
```

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

Write a program which defines three variables of type double and store three different values including decimal points in these variables, using setprecision manipulators print all these values with different number of digits after the decimal point.

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

```
String( char *s)
{
    int length = strlen(s);

    str = new char [length + 1];
```

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

```
strcpy(str, s);  
}
```

```
};
```

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

};

You are required to write the code for overloading the + operator for the above class to add two objects of type String.

Note: Adding two strings means concatenating the two strings.

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

```
char str[] = "This is a line";  
char *p;  
  
p = strchr(str, 's');
```

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

```
while (p != NULL) {  
    cout<<"found at \n"<<p - str + 1;  
    p = strchr(p + 1, 's');  
}
```

Answer (Please [click here to Add Answer](#))

Made by: Waqar Siddhu

```
cout << found << endl << p - str + 1,  
  
    p = strchr(p + 1, 's');  
}  
  
return 0;  
}
```
