Molded out of high impact polymer material. Push lined, form fitted interior.

CMC 100 for Model 1, 1A, 2, 3, 3A, 4

CMC 110 for Model 5, 6

CMC200 for Model 1B, 2B, 3B

Jackson TREMLO

The Jackson® Tremolo, licensed under Floyd Rose Patents, marks the most noticeable change on the Charvel guitar. Appearing on Models 2-6, this unit brings several improvements to the locking system.

The microtoners are placed horizontally to allow easy access only when you need them, staying well out of the way while playing. The tremolo arm is instantly removable, with replaceable bushings on the yoke providing precise and reliable drag. The saddle blocks are joined closely together to form an excellent, comfortable playing surface designed not to distract the hand at any time during a performance. Maximum string life is assured by the subtle curvature of the slots in the saddle pieces. The secure grip of the string locking nut can be tightened or loosened by an ordinary penny. And finally, precise machining of the knife edges ensures tracking accuracy, sustain, and long term reliability.

GTM-6 GUITAR-TO-MIDI CONVERTER

The GTM6 allows the player to control up to eight synthesizers or samplers individually. For complete specifications and a personal demonstration, see your nearest authorized Charvel dealer.
