World Justice Project Rule of Law Index[®] 2021

The World Justice Project Rule of Law Index® 2021

The *World Justice Project (WJP) Rule of Law Index® 2021* report was prepared by the World Justice Project. The Index's conceptual framework and methodology were developed by Juan Carlos Botero, Mark David Agrast, and Alejandro Ponce. Data collection and analysis for the 2021 report was performed by Erin Campbell, Alicia Evangelides, Emma Frerichs, Joshua Fuller, Natalia Jardon, Sahar Omer, Alejandro Ponce, Tanya Primiani, Natalia Rodríguez Cajamarca, and Victoria Thomaidēs, with the assistance of Jacob Alabab-Moser, James Davis, Nora Futtner, Karelle Matchum, and Mac Simpson.

The graphic design team for this report included Courtney Babcock, Abigail Broussard, and Irene Heras.

Lead website designer was Pitch Interactive, with assistance from Courtney Babcock, Abigail Broussard, Irene Heras, and Natalia Jardon.

ISBN (*print version*): 978-0-9964094-7-6
ISBN (*digital version*): 978-0-9964094-6-9

The World Justice Project

Board of Directors: William C. Hubbard, Chair, Sheikha Abdulla Al-Misnad, Kamel Ayadi, Hassan Bubacar Jallow, Suet-Fern Lee, Mondli Makhanya, M. Margaret McKeown, John Nery, William H. Neukom, James R. Silkenat, and Ellen Gracie Northfleet.

Directors Emeriti: Ashraf Ghani Ahmadzai, Emil Constantinescu, and Petar Stoyanov.

Officers: William H. Neukom, Co-Founder and CEO; William C. Hubbard, Co-Founder and Board Chair; Mark D. Agrast, Vice President; Deborah Enix-Ross, Vice President; Judy Perry Martinez, Vice President; Nancy Ward, Vice President; Gerold W. Libby, General Counsel and Secretary; James R. Silkenat, Director and Treasurer.

Executive Director: Elizabeth Andersen

Chief Research Officer: Alejandro Ponce

The *WJP Rule of Law Index 2021* report was made possible by the generous supporters of the work of the World Justice Project listed in this report on page 223.

The *WJP Rule of Law Index* is the world's leading source for original, independent data on the rule of law.

Introduction

The World Justice Project (WJP) Rule of Law Index® 2021 is the latest report in an annual series measuring the rule of law based on the experiences and perceptions of the general public and in-country legal practitioners and experts worldwide.

Strengthening the rule of law is a major goal of citizens, governments, donors, businesses, and civil society organizations around the world. To be effective, rule of law development requires clarity about the fundamental features that define the rule of law, as well as an adequate basis for its evaluation and measurement.

The *WJP Rule of Law Index 2021* presents a portrait of the rule of law in 139 countries and jurisdictions by providing scores and rankings based on eight factors: Constraints on Government Powers, Absence of Corruption, Open Government, Fundamental Rights, Order and Security, Regulatory Enforcement, Civil Justice, and Criminal Justice.

The scores and rankings in the *WJP Rule of Law Index 2021* are derived from more than 138,000 household surveys and 4,200 legal practitioner and expert surveys worldwide. The Index is the world's most comprehensive dataset of its kind and the only to rely principally on primary data, including the perspectives and experiences of ordinary people.

The Index is intended for a broad audience that includes policy makers, civil society organizations, academics, citizens, and legal professionals, among others. It is our hope that this diagnostic tool will help identify strengths and weaknesses within each country or jurisdiction, and encourage policy choices, guide program development, and inform research to strengthen the rule of law within and across these countries and jurisdictions.

Overview of Overall Scores and Rankings

The table below shows the overall scores and rankings of the *WJP Rule of Law Index 2021* in alphabetical order. Scores range from 0 to 1, with 1 indicating the strongest adherence to the rule of law.

Country/Jurisdiction	Overall Score*	Change in Overall Score*	Global Rank	Change in Global Rank [†]	Country/Jurisdiction	Overall Score*	Change in Overall Score*	Global Rank	Change in Global Rank [†]

*Scores and change in scores are rounded to two decimal places.

†The change in rankings was calculated by comparing the positions of the 128 countries and jurisdictions measured in the 2020 Index with the rankings of the same 128 countries and jurisdictions in 2021, exclusive of the 11 new additions to the 2021 Index. The 11 new countries and jurisdictions added to the Index this year are: Congo, Rep., Cyprus, Haiti, Ireland, Latvia, Lithuania, Luxembourg, Malta, Paraguay, Slovak Republic, and Sudan.

*Scores and change in scores are rounded to two decimal places.

†The change in rankings was calculated by comparing the positions of the 128 countries and jurisdictions measured in the 2020 Index with the rankings of the same 128 countries and jurisdictions in 2021, exclusive of the 11 new additions to the 2021 Index. The 11 new countries and jurisdictions added to the Index this year are: Congo, Rep., Cyprus, Haiti, Ireland, Latvia, Lithuania, Luxembourg, Malta, Paraguay, Slovak Republic, and Sudan.

Features of the WJP Rule of Law Index

The World Justice Project (WJP) developed the *WJP Rule of Law Index* to serve as a quantitative tool for measuring the rule of law in practice. The Index's methodology and comprehensive definition of the rule of law are the products of intensive consultation and vetting with academics, practitioners, and community leaders from more than 100 countries and jurisdictions and 17 professional disciplines.

The scores and rankings of the eight factors and 44 sub-factors of the Index draw from two sources of data collected by the WJP:

1. **A General Population Poll (GPP)** conducted by leading local polling companies, using a representative sample of 1,000¹ respondents in each country and jurisdiction.
2. **Qualified Respondents' Questionnaires (QRQs)** consisting of closed-ended questions completed by in-country legal practitioners, experts, and academics with expertise in civil and commercial law; constitutional law, civil liberties, and criminal law; labor law; and public health.²

Taken together, these two data sources provide current, original information reflecting the experiences and perceptions of the general public and in-country legal practitioners and experts in 139 countries and jurisdictions worldwide.

Rule of Law in Practice

The Index measures adherence to the rule of law by looking at policy outcomes, such as whether people have access to courts or whether crime is effectively controlled. This stands in contrast to efforts that focus on the written legal code, or the institutional means by which a society may seek to achieve these policy outcomes.

Comprehensive and Multi-Dimensional

While other indices cover particular aspects of the rule of law, such as absence of corruption or human rights, they do not yield a full picture of the state of the rule of law. The *WJP Rule of Law Index* is the only global instrument that looks at the rule of law comprehensively.

Perspective of Ordinary People

The *WJP Rule of Law Index* puts people at its core. It looks at a country's adherence to the rule of law from the perspective of ordinary individuals and their experiences with the rule of law in their societies. The Index examines practical, everyday situations, such as whether people can access public services and whether a dispute among neighbors can be resolved peacefully and cost-effectively by an independent adjudicator.

New Data Anchored in Actual Experiences

The Index is the only comprehensive set of indicators on the rule of law that is based on primary data. The Index's scores are built from the assessments of residents (1,000 respondents per country or jurisdiction) and local legal practitioners and experts, which ensure that the findings reflect the conditions experienced by actual people, including residents from marginalized sectors of society.

Culturally Competent

The Index has been designed to be applied in countries and jurisdictions with vastly different social, cultural, economic, and political systems. No society has ever attained—let alone sustained—a perfect realization of the rule of law. Every country faces the perpetual challenge of building and renewing the structures, institutions, and norms that can support and sustain a rule of law culture.

Country-Specific Data and Online Tools

In addition to this written report, an interactive online platform for country-specific *WJP Rule of Law Index* data is available at: worldjusticeproject.org. The interactive data site invites viewers to browse each of the 139 country and jurisdiction profiles and explore overall and factor scores.

¹ Due to small populations or obstacles to data collection in certain countries and jurisdictions, the sampling plan was adjusted in some cases. One adjustment was to decrease the sample size. For more information on specific countries and jurisdictions and sample sizes, see pages 184-187.

² Please see the "Methodology" section on page 181 of this report for more detailed information regarding data collection and score computation.

Defining the Rule of Law

Effective rule of law reduces corruption, combats poverty and disease, and protects people from injustices large and small. It is the foundation for communities of justice, opportunity, and peace—underpinning development, accountable government, and respect for fundamental rights. Traditionally, the rule of law has been viewed as the domain of lawyers and judges. However, everyday issues of safety, rights, justice, and governance affect us all; everyone is a stakeholder in the rule of law.

Despite its profound importance for fair and functioning societies, the rule of law is notoriously difficult to define and measure. A simple way of approaching it is to examine a set of outcomes that the rule of law brings to societies, each of which reflects one aspect of the complex concept of the rule of law. The *WJP Rule of Law Index* seeks to embody these outcomes within a simple and coherent framework.

The *WJP Rule of Law Index* captures adherence to the rule of law as defined by the WJP’s universal principles (see following page) through a comprehensive and multi-dimensional set of outcome indicators, each of which reflects a particular aspect of this complex concept. The theoretical framework linking these outcome indicators draws upon two main principles pertaining to the relationship between the state and the governed.

The first principle measures whether the law imposes limits on the exercise of power by the state and its agents, as well as individuals and private entities. This is measured in Factors One, Two, Three, and Four of the Index. The second principle measures whether the state limits the actions of members of society and fulfills its basic duties towards its population so that the public interest is served, people are protected from violence, and all members of society have access to dispute settlement and grievance mechanisms. This is measured in Factors Five, Six, Seven, and Eight of the Index. Although broad in scope, this framework assumes very little about the functions of the state, and when it does, it incorporates functions that are recognized by practically all societies, such as the provision of justice or the guarantee of order and security.

The resulting set of indicators is also an effort to strike a balance between what scholars call a “thin” or minimalist conception of the rule of law that focuses on formal, procedural rules, and a “thick” conception that includes substantive characteristics, such as self-governance and various fundamental rights and freedoms. Striking this balance between “thin” and “thick” conceptions of the rule of law enables the Index to apply to different types of social and political systems, including those that lack many of the features that characterize democratic nations, while including sufficient substantive characteristics

to render the rule of law as more than a system of rules. The Index recognizes that a system of law that fails to respect core human rights guaranteed under international law is at best “rule by law” and does not deserve to be called a rule of law system.

The rule of law affects all of us in our everyday lives. Although we may not be aware of it, the rule of law is profoundly important—and not just for lawyers or judges. Every sector of society is a stakeholder in the rule of law. Below are a few examples:

Business Environment

Imagine an investor seeking to commit resources abroad. She would probably think twice before investing in a country where corruption is rampant, property rights are ill-defined, and contracts are difficult to enforce. Uneven enforcement of regulations, corruption, insecure property rights, and ineffective means to settle disputes undermine legitimate business and deter both domestic and foreign investment.

Public Works

Consider the bridges, roads, or runways we traverse daily—or the offices and buildings in which we live, work, and play. What would happen if building codes governing design and safety were not enforced? What if government officials and contractors used low-quality materials to pocket the surplus? Weak regulatory enforcement and corruption decrease the security of physical infrastructure and waste scarce resources, which are essential to a thriving economy.

Public Health and Environment

Consider the implications of pollution, wildlife poaching, and deforestation for public health and the environment. What would happen if a company were pouring harmful chemicals into a river in a highly populated area and the environmental inspector ignored these actions in exchange for a bribe? Adherence to the rule of law is essential to holding governments, businesses, civil society organizations, and communities accountable for protecting public health and the environment.

The Four Universal Principles of the Rule of Law

The World Justice Project defines the rule of law as a durable system of laws, institutions, norms, and community commitment that delivers:

Universal Principle One
Accountability

The government as well as private actors are accountable under the law.

Universal Principle Two
Just Law

The law is clear, publicized, and stable; is applied evenly; and protects fundamental human rights as well as contract and property rights.

Universal Principle Three
Open Government

The processes by which the law is adopted, administered, adjudicated, and enforced are accessible, fair, and efficient.

Universal Principle Four
Accessible and Impartial Justice

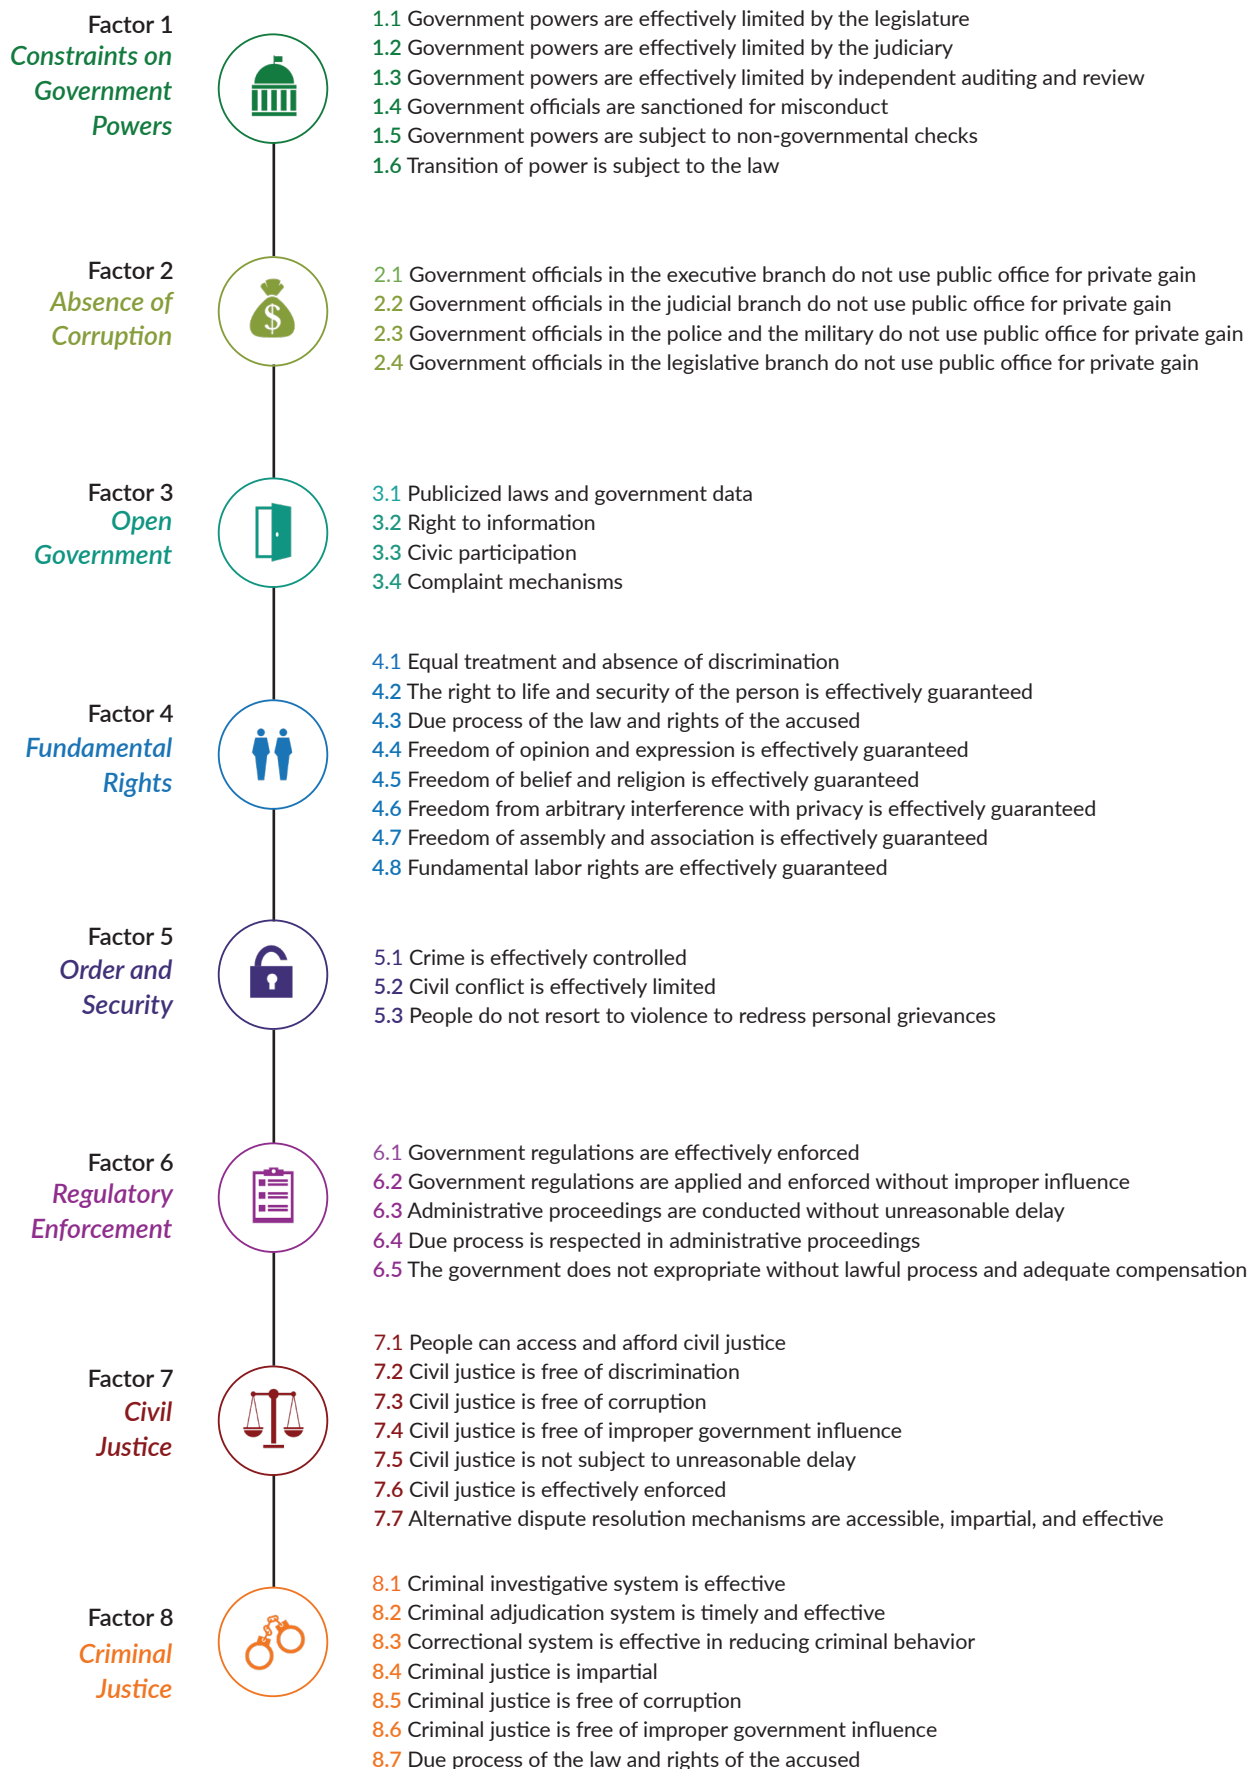

Justice is delivered timely by competent, ethical, and independent representatives and neutrals who are accessible, have adequate resources, and reflect the makeup of the communities they serve.

The four universal principles are further developed in the following eight factors of the annual *WJP Rule of Law Index*:

Constraints on Government Powers, Absence of Corruption, Open Government, Fundamental Rights, Order and Security, Regulatory Enforcement, Civil Justice, and Criminal Justice.

Conceptual Framework of the WJP Rule of Law Index

The conceptual framework of the *WJP Rule of Law Index* is comprised of eight factors further disaggregated into 44 sub-factors. These factors and sub-factors are presented below and described in detail in the section that follows.

Informal Justice and the Rule of Law

The conceptual framework of the Index includes a ninth factor on informal justice that is not included in the Index's aggregate scores and rankings. Informal justice systems often play a large role in countries and jurisdictions where formal legal institutions are weak, remote, or perceived as ineffective. For this reason, the WJP has devoted effort to collecting data on informal justice through our surveys. Nonetheless, the complexities of these systems and the difficulties of systematically measuring their fairness and effectiveness make cross-country assessments extraordinarily challenging. For this reason, the informal justice factor is not included in the Index scores and rankings.

Factor 9: Informal Justice

- 9.1 Informal justice is timely and effective
- 9.2 Informal justice is impartial and free of improper influence
- 9.3 Informal justice respects and protects fundamental rights

Indicators of the WJP Rule of Law Index

Factor 1: Constraints on Government Powers

- 1.1 Government powers are effectively limited by the legislature**
Measures whether legislative bodies have the independence and the ability in practice to exercise effective checks on and oversight of the government.
- 1.2 Government powers are effectively limited by the judiciary**
Measures whether the judiciary has the independence and the ability in practice to exercise effective checks on and oversight of the government.
- 1.3 Government powers are effectively limited by independent auditing and review**
Measures whether comptrollers or auditors, as well as national human rights ombudsman agencies, have sufficient independence and the ability to exercise effective checks on and oversight of the government.
- 1.4 Government officials are sanctioned for misconduct**
Measures whether government officials in the executive, legislature, judiciary, and the police are investigated, prosecuted, and punished for official misconduct and other violations.
- 1.5 Government powers are subject to non-governmental checks**
Measures whether an independent media, civil society organizations, political parties, and individuals are free to report and comment on government policies without fear of retaliation.
- 1.6 Transition of power is subject to the law**
Measures whether government officials are elected or appointed in accordance with the rules and procedures set forth in the constitution. Where elections take place, it also measures the integrity of the electoral process, including access to the ballot, the absence of intimidation, and public scrutiny of election results.

Factor 2: Absence of Corruption

- 2.1 Government officials in the executive branch do not use public office for private gain**
Measures the prevalence of bribery, informal payments, and other inducements in the delivery of public services and the enforcement of regulations. It also measures whether government procurement and public works contracts are awarded through an open and competitive bidding process, and whether government officials at various levels of the executive branch refrain from embezzling public funds.
- 2.2 Government officials in the judicial branch do not use public office for private gain**
Measures whether judges and judicial officials refrain from soliciting and accepting bribes to perform duties or expedite processes, and whether the judiciary and judicial rulings are free of improper influence by the government, private interests, or criminal organizations.
- 2.3 Government officials in the police and the military do not use public office for private gain**
Measures whether police officers and criminal investigators refrain from soliciting and accepting bribes to perform basic police services or to investigate crimes, and whether government officials in the police and the military are free of improper influence by private interests or criminal organizations.
- 2.4 Government officials in the legislative branch do not use public office for private gain**
Measures whether members of the legislature refrain from soliciting or accepting bribes or other inducements in exchange for political favors or favorable votes on legislation.

Factor 3: Open Government

3.1 Publicized laws and government data

Measures whether basic laws and information on legal rights are publicly available, presented in plain language, and made accessible in all languages used in the country or jurisdiction. It also measures the quality and accessibility of information published by the government in print or online, and whether administrative regulations, drafts of legislation, and high court decisions are made accessible to the public in a timely manner.

3.2 Right to information

Measures whether requests for information held by a government agency are granted, whether these requests are granted within a reasonable time period, if the information provided is pertinent and complete, and if requests for information are granted at a reasonable cost and without having to pay a bribe. It also measures whether people are aware of their right to information, and whether relevant records are accessible to the public upon request.

3.3 Civic participation

Measures the effectiveness of civic participation mechanisms, including the protection of the freedoms of opinion and expression, assembly and association, and the right to petition the government. It also measures whether people can voice concerns to various government officers, and whether government officials provide sufficient information and notice about decisions affecting the community.

3.4 Complaint mechanisms

Measures whether people are able to bring specific complaints to the government about the provision of public services or the performance of government officers in carrying out their legal duties in practice, and how government officials respond to such complaints.

Factor 4: Fundamental Rights

4.1 Equal treatment and absence of discrimination

Measures whether individuals are free from discrimination—based on socio-economic status, gender, ethnicity, religion, national origin, sexual orientation, or gender identity—with respect to public services, employment, court proceedings, and the justice system.

4.2 The right to life and security of the person is effectively guaranteed

Measures whether the police inflict physical harm upon criminal suspects during arrest and interrogation, and whether political dissidents or members of the media are subjected to unreasonable searches, arrest, detention, imprisonment, threats, abusive treatment, or violence.

4.3 Due process of the law and rights of the accused

Measures whether the basic rights of criminal suspects are respected, including the presumption of innocence and the freedom from arbitrary arrest and unreasonable pre-trial detention. It also measures whether criminal suspects are able to access and challenge evidence used against them, whether they are subject to abusive treatment, and whether they are provided with adequate legal assistance. In addition, it measures whether the basic rights of prisoners are respected once they have been convicted of a crime.

4.4 Freedom of opinion and expression is effectively guaranteed

Measures whether an independent media, civil society organizations, political parties, and individuals are free to report and comment on government policies without fear of retaliation.

4.5 Freedom of belief and religion is effectively guaranteed

Measures whether members of religious minorities can worship and conduct religious practices freely and publicly, and whether non-adherents are protected from having to submit to religious laws.

4.6 Freedom from arbitrary interference with privacy is effectively guaranteed

Measures whether the police or other government officials conduct physical searches without warrants, or intercept electronic communications of private individuals without judicial authorization.

4.7 Freedom of assembly and association is effectively guaranteed

Measures whether people can freely attend community meetings, join political organizations, hold peaceful public demonstrations, sign petitions, and express opinions against government policies and actions without fear of retaliation.

4.8 Fundamental labor rights are effectively guaranteed

Measures the effective enforcement of fundamental labor rights, including freedom of association and the right to collective bargaining, the absence of discrimination with respect to employment, and freedom from forced labor and child labor.

Factor 5: Order and Security

5.1 Crime is effectively controlled

Measures the prevalence of common crimes, including homicide, kidnapping, burglary and theft, armed robbery, and extortion, as well as people's general perceptions of safety in their communities.

5.2 Civil conflict is effectively limited

Measures whether people are effectively protected from armed conflict and terrorism.

5.3 People do not resort to violence to redress personal grievances

Measures whether people resort to intimidation or violence to resolve civil disputes amongst themselves or to seek redress from the government, and whether people are free from mob violence.

Factor 6: Regulatory Enforcement

6.1 Government regulations are effectively enforced

Measures whether government regulations, such as labor, environmental, public health, commercial, and consumer protection regulations are effectively enforced.

6.2 Government regulations are applied and enforced without improper influence

Measures whether the enforcement of regulations is subject to bribery or improper influence by private interests; and whether public services, such as the issuance of permits and licenses and the administration of public health services, are provided without bribery or other illegal inducements.

6.3 Administrative proceedings are conducted without unreasonable delay

Measures whether administrative proceedings at the national and local levels are conducted without unreasonable delay.

6.4 Due process is respected in administrative proceedings

Measures whether due process of the law is respected in administrative proceedings conducted by national and local authorities in issue areas such as the environment, taxes, and labor.

6.5 The government does not expropriate without lawful process and adequate compensation

Measures whether the government respects the property rights of people and corporations, refrains from the illegal seizure of private property, and provides adequate compensation when property is legally expropriated.

Factor 7: Civil Justice

7.1 People can access and afford civil justice

Measures the accessibility and affordability of civil courts, including whether people are aware of available remedies; can access and afford legal advice and representation; and can access the court system without incurring unreasonable fees, encountering unreasonable procedural hurdles, or experiencing physical or linguistic barriers.

7.2 Civil justice is free of discrimination

Measures whether the civil justice system discriminates in practice based on socio-economic status, gender, ethnicity, religion, national origin, sexual orientation, or gender identity.

7.3 Civil justice is free of corruption

Measures whether the civil justice system is free of bribery and improper influence by private interests.

7.4 Civil justice is free of improper government influence

Measures whether the civil justice system is free of improper government or political influence.

7.5 Civil justice is not subject to unreasonable delay

Measures whether civil justice proceedings are conducted and judgments are produced in a timely manner without unreasonable delay.

7.6 Civil justice is effectively enforced

Measures the effectiveness and timeliness of the enforcement of civil justice decisions and judgments in practice.

7.7 Alternative dispute resolution mechanisms are accessible, impartial, and effective

Measures whether alternative dispute resolution mechanisms (ADRs) are affordable, efficient, enforceable, and free of corruption.

Factor 8: Criminal Justice

8.1 Criminal investigative system is effective

Measures whether perpetrators of crimes are effectively apprehended and charged. It also measures whether police, investigators, and prosecutors have adequate resources, are free of corruption, and perform their duties competently.

8.2 Criminal adjudication system is timely and effective

Measures whether perpetrators of crimes are effectively prosecuted and punished. It also measures whether criminal judges and other judicial officers are competent and produce speedy decisions.

8.3 Correctional system is effective in reducing criminal behavior

Measures whether correctional institutions are secure, respect prisoners' rights, and are effective in preventing recidivism.

8.4 Criminal justice is impartial

Measures whether the police and criminal judges are impartial and whether they discriminate in practice based on socio-economic status, gender, ethnicity, religion, national origin, sexual orientation, or gender identity.

8.5 Criminal justice is free of corruption

Measures whether the police, prosecutors, and judges are free of bribery and improper influence from criminal organizations.

8.6 Criminal justice is free of improper government influence

Measures whether the criminal justice system is independent from government or political influence.

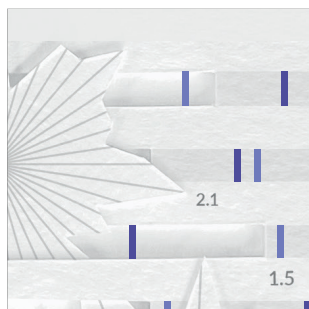

8.7 Due process of the law and rights of the accused

Measures whether the basic rights of criminal suspects are respected, including the presumption of innocence and the freedom from arbitrary arrest and unreasonable pre-trial detention. It also measures whether criminal suspects can access and challenge evidence used against them, whether they are subject to abusive treatment, and whether they are provided with adequate legal assistance. In addition, it measures whether the basic rights of prisoners are respected once they have been convicted of a crime.

"We are all servants of the laws in order that we may be free."

Adherence to the rule of law

*Income groups used in this year's report are based on the World Bank's 2021 fiscal year income group classifications.

†Scores are rounded to two decimal places.

‡The change in rankings was calculated by comparing the positions of the 128 countries and jurisdictions measured in the 2020 Index with the rankings of the same 128 countries and jurisdictions in 2021, exclusive of the 11 new additions to the 2021 Index. The 11 new countries and jurisdictions added to the Index this year are: Congo, Rep., Cyprus, Haiti, Ireland, Latvia, Lithuania, Luxembourg, Malta, Paraguay, Slovak Republic, and Sudan.

Constraints on Government Powers

Factor 1 measures the extent to which those who govern are bound by law. It comprises the means, both constitutional and institutional, by which the powers of the government and its officials and agents are limited and held accountable under the law. It also includes non-governmental checks on the government's power, such as a free and independent press. For a further breakdown of Constraints on Government Powers by sub-factor, please refer to page 16.

Absence of Corruption

Factor 2 measures the absence of corruption in government. The factor considers three forms of corruption: bribery, improper influence by public or private interests, and misappropriation of public funds or other resources. These three forms of corruption are examined with respect to government officers in the executive branch, the judiciary, the military, police, and the legislature. For a further breakdown of Absence of Corruption by sub-factor, please refer to page 16.

Open Government

Factor 3 measures the openness of government defined by the extent to which a government shares information, empowers people with tools to hold the government accountable, and fosters citizen participation in public policy deliberations. This factor measures whether basic laws and information on legal rights are publicized and evaluates the quality of information published by the government. For a further breakdown of Open Government by sub-factor, please refer to page 17.

Fundamental Rights

Factor 4 recognizes that a system of positive law that fails to respect core human rights established under international law is at best “rule by law,” and does not deserve to be called a rule of law system. Since there are many other indices that address human rights, and because it would be impossible for the Index to assess adherence to the full range of rights, this factor focuses on a relatively modest menu of rights that are firmly established under the United Nations Universal Declaration of Human Rights and are most closely related to rule of law concerns. For a further breakdown of Fundamental Rights by sub-factor, please refer to page 17.

Order and Security

Factor 5 measures how well a society ensures the security of persons and property. Security is one of the defining aspects of any rule of law society and is a fundamental function of the state. It is also a precondition for the realization of the rights and freedoms that the rule of law seeks to advance. For a further breakdown of Order and Security by sub-factor, please refer to page 18.

Regulatory Enforcement

Factor 6 measures the extent to which regulations are fairly and effectively implemented and enforced. Regulations, both legal and administrative, structure behaviors within and outside of the government. This factor does not assess which activities a government chooses to regulate, nor does it consider how much regulation of a particular activity is appropriate. Rather, it examines how regulations are implemented and enforced. For a further breakdown of Regulatory Enforcement by sub-factor, please refer to page 18.

Civil Justice

Factor 7 measures whether ordinary people can resolve their grievances peacefully and effectively through the civil justice system. It measures whether civil justice systems are accessible and affordable as well as free of discrimination, corruption, and improper influence by public officials. It examines whether court proceedings are conducted without unreasonable delays and whether decisions are enforced effectively. It also measures the accessibility, impartiality, and effectiveness of alternative dispute resolution mechanisms. For a further breakdown of Civil Justice by sub-factor, please refer to page 18.

Criminal Justice

Factor 8 evaluates a country’s criminal justice system. An effective criminal justice system is a key aspect of the rule of law, as it constitutes the conventional mechanism to redress grievances and bring action against individuals for offenses against society. An assessment of the delivery of criminal justice should take into consideration the entire system, including the police, lawyers, prosecutors, judges, and prison officers. For a further breakdown of Criminal Justice by sub-factor, please refer to page 19.

How to Read the Country Profiles

This section presents profiles for the 139 countries and jurisdictions included in the *WJP Rule of Law Index® 2021* report. Each profile presents the featured country's scores for each of the *WJP Rule of Law Index's* factors and sub-factors, and draws comparisons between the scores of the featured country and the scores of other indexed countries in the same regional and income groups.

The scores range from 0 to 1, where 1 signifies the highest possible score (strong adherence to rule of law) and 0 signifies the lowest possible score (weak adherence to rule of law). The country profiles consist of four sections, outlined below.

Displays the country's overall rule of law score; its overall regional, income, and global ranks; and its change in score and rank from the 2020 edition of the Index.

Section 1

Section 2

Displays the featured country's individual factor scores, along with its regional, income, and global group rankings. The regional, income, and global rankings are distributed across three tiers – low, medium, and high – as indicated by the color of the box where the score is found.

Section 4

Presents the individual sub-factor scores underlying each of the factors listed in Section 3 of the country profile.

Each of the 44 sub-factors is represented by a gray line drawn from the center to the periphery of the circle. The center of the circle corresponds to the worst possible score for each sub-factor (0), and the outer edge of the circle marks the best possible score for each sub-factor (1).

The featured country's scores for 2021 are represented by the purple line. The featured country's scores for 2020 are represented by the gray line.

Section 3

Displays the country's disaggregated scores for each of the sub-factors that compose the *WJP Rule of Law Index*.

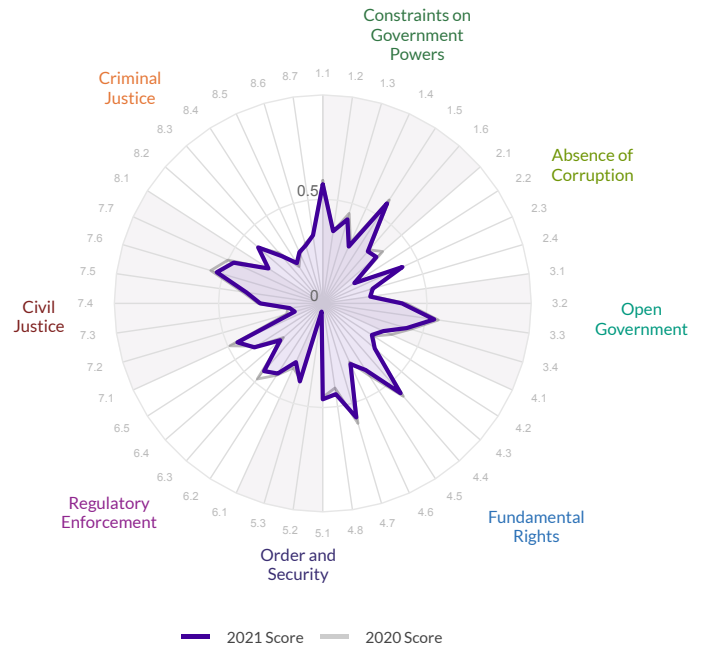

The featured country's score is represented by the purple bar and labeled at the end of the bar. The average score of the country's region is represented by the orange line. The average score of the country's income group is represented by the green line.

Afghanistan

The scores range from 0 to 1, where 1 signifies the highest possible score and 0 signifies the lowest possible score.

Methodology Snapshot:

Steps to Produce the WJP Rule of Law Index

The production of the *WJP Rule of Law Index* can be summarized in 11 steps:

- 1 The WJP developed the conceptual framework summarized in the Index's nine factors and 47 sub-factors, in consultation with academics, practitioners, and community leaders from around the world.
- 2 The Index team developed a set of five questionnaires based on the Index's conceptual framework to be administered to experts and the general public. Questionnaires were translated into several languages and adapted to reflect commonly used terms and expressions.
- 3 The Index team identified, on average, more than 300 potential local experts per country to respond to the expert surveys, or Qualified Respondents' Questionnaires (QRQs). The team engaged the services of leading local polling companies to implement the household surveys, or General Population Poll (GPP).
- 4 Polling companies conducted pilot tests of the GPP in consultation with the Index team, and launched the final survey for full fieldwork.
- 5 The Index team sent the QRQ questionnaires to local experts and engaged in continual interaction with them.
- 6 The Index team collected and mapped the data onto the eight factors and 44 sub-factors with global comparability that make up the scores and rankings of the *WJP Rule of Law Index*.
- 7 The Index team constructed the final scores using a five-step process:
 - a. Codified the questionnaire items as numeric values
 - b. Produced raw country scores by aggregating the responses from several individuals (experts and/or general public)
 - c. Normalized the raw scores
 - d. Aggregated the normalized scores into sub-factors and factors using simple averages
 - e. Produced the normalized scores, which are rounded to two decimal points, and the final rankings
- 8 The data was subject to a series of tests to identify possible biases and errors. For example, the Index team cross-checked all sub-factors against more than 70 third-party sources, including quantitative data and qualitative assessments drawn from local and international organizations.
- 9 A sensitivity analysis was conducted by the Econometrics and Applied Statistics Unit of the European Commission's Joint Research Centre, in collaboration with the Index team, to assess the statistical reliability of the results.
- 10 To illustrate whether the rule of law in a country significantly changed over the course of the past year, a measure of change over time was produced based on the annual difference in the country-level factor scores, the standard errors of these scores (estimated from a set of 100 bootstrap samples), and the results of the corresponding t-tests.
- 11 The data was organized into country reports, tables, and figures to facilitate its presentation and interpretation. For tables organized by income group, the WJP follows the World Bank income classifications.

Methodology

The *WJP Rule of Law Index* is the first attempt to systematically and comprehensively quantify the rule of law around the world and remains unique in its operationalization of rule of law dimensions into concrete questions.

The *WJP Rule of Law Index 2021* report presents information on eight composite factors that are further disaggregated into 44 specific sub-factors (see page 16). Factor 9: Informal Justice is included in the conceptual framework but has been excluded from the aggregated scores and rankings in order to provide meaningful cross-country comparisons.

The country scores and rankings presented in this report are built from more than 500 variables drawn from the assessments of more than 138,000 households and 4,200 legal practitioners and experts in 139 countries and jurisdictions, making it the most accurate portrayal of the factors that contribute to shaping the rule of law in a country or jurisdiction.

Data Sources

To present an image that accurately portrays the rule of law as experienced by ordinary people, each score of the Index is calculated using a large number of questions drawn from two original data sources collected by the World Justice Project in each country: a General Population Poll (GPP) and a series of Qualified Respondents' Questionnaires (QRQs). These two data sources collect up-to-date firsthand information that is not available at the global level, and constitute the world's most comprehensive dataset of its kind. They capture the experiences and perceptions of ordinary citizens and in-country professionals concerning the performance of the state and its agents and the actual operation of the legal framework in their country or jurisdiction.

The GPP surveys provide firsthand information on the experiences and the perceptions of ordinary people regarding a range of pertinent rule of law information, including their dealings with the government, the ease of interacting with state bureaucracy, the extent of bribery and corruption, the availability of dispute resolution systems, and the prevalence of common crimes to which they are exposed.

The GPP questionnaire includes 127 perception-based questions and 213 experience-based questions, along with socio-demographic information on all respondents. The questionnaire is translated into local languages, adapted to common expressions, and administered by leading local polling companies using a probability sample of 1,000 respondents.³ In previous editions of the Index, the poll has been conducted in the three largest cities of each country. However, the World Justice Project's goal was to update its methodology to include nationally representative polls. Towards this end, nationally representative polls have been conducted in 77 countries and jurisdictions covered in the 2021 *WJP Rule of Law Index*. Nationally representative polls will be conducted in

the remaining countries in future editions of the Index. Depending on the particular situation of each country or jurisdiction, one of three different polling methodologies is used: face-to-face, telephone, or online. The GPP has been carried out in each country every few years. The polling data used in this year's report was collected during fall 2020 through summer 2021 (for 13 countries), fall 2019 (for 10 countries), fall 2018 (for 69 countries), fall 2017 (for 45 countries), fall 2016 (for four countries), fall 2014 (for three countries), fall 2012 (for one country), and fall 2011 (for two countries). Detailed information regarding the country coverage (cities covered or nationally representative), the polling companies contracted to administer the questionnaire, and the polling methodology employed in each of the 139 countries and jurisdictions is presented on page 184.

The QRQs complement the household data with assessments from in-country practitioners and academics with expertise in civil and commercial law, criminal and constitutional law, labor law, and public health. These questionnaires gather timely input on a range of topics from practitioners who frequently interact with state institutions. Such topics include information on the efficacy of courts, the strength of regulatory enforcement, and the reliability of accountability mechanisms.

The questionnaires contain closed-ended perception questions and several hypothetical scenarios with highly detailed factual assumptions aimed at ensuring comparability across countries. The QRQ surveys are conducted annually, and the questionnaires are completed by respondents selected from directories of law firms, universities and colleges, research organizations, and non-governmental organizations (NGOs), as well as through referrals from the WJP global network of practitioners, and all are vetted by WJP staff based on their expertise. The expert surveys are administered in six languages: Arabic, English, French, Portuguese, Russian, and Spanish. The QRQ data for this report includes more than 4,200 surveys, which represents an average of 30 respondents per country. This data was collected from October 2020 through May 2021.

Data Cleaning and Score Computation

Once collected, the data is carefully processed to arrive at country-level scores. As a first step, the respondent level data is edited to exclude partially completed surveys, suspicious data, and outliers (which are detected using the Z-score method). Individual answers are then mapped onto the 44 sub-factors of the Index (or onto the intermediate categories that make up each sub-factor), codified so that all values fall between zero (weakest

³ Due to small populations or obstacles to data collection in certain countries and jurisdictions, the sampling plan was adjusted in some cases. One adjustment was to decrease the sample size. For more information on specific countries and jurisdictions and sample sizes, see pages 184-187.

adherence to the rule of law) and 1 (strongest adherence to the rule of law), and aggregated at the country level using the simple (or unweighted) average of all respondents.

This year, to allow for an easier comparison across years, the resulting 2021 scores have been normalized using the Min-Max method with a base year of 2015. These normalized scores were then successively aggregated from the variable level all the way up to the factor level to produce the final country scores, rounded to two decimal points, and rankings. In most cases, the GPP and QRQ questions are equally weighted in the calculation of the scores of the intermediate categories (sub-factors and sub-sub-factors).

A full picture of how questions are mapped onto indicators and how they are weighted is available on the *WJP Rule of Law Index* web page at <https://worldjusticeproject.org/our-work/research-and-data/wjp-rule-law-index-2020>.

Data Validation

As a final step, data is validated and cross-checked against qualitative and quantitative third-party sources to provide an additional layer of analysis and to identify possible mistakes or inconsistencies within the data. Most of the third-party data sources used to cross-check the Index scores are described in Botero and Ponce (2011).

Methodological Changes to this Year's Report

Every year, the WJP reviews the methods of data collection to ensure that the information produced is valid, useful, and continues to capture the status of the rule of law in the world. To maintain consistency with previous editions and to facilitate tracking changes over time, this year's questionnaires and data maps are closely aligned with those administered in the past.

In order to improve the accuracy of the QRQ results and reduce respondent burden, proactive dependent interviewing techniques were used to remind respondents who participated in last year's survey of their responses in the previous year.

This year, no new questions or indicators were added to the Index. Overall, 100 percent of questions remained the same between the 2020 and 2021 editions of the Index. A description of the variables is available at worldjusticeproject.org.

Tracking Changes Over Time

This year's report includes two measures to illustrate whether the rule of law in a country, as measured through the factors of the *WJP Rule of Law Index*, changed since the previous year. One measure is the change in factor score, which is included in

the country profiles for each factor in each country. The second measure is a measure of statistically significant changes, both positive and negative. This measure is presented in the form of a green or red asterisk and text, and represents a summary of rigorous statistical testing based on the use of bootstrapping procedures (see below). For each factor, this measure has no asterisk and is written in black text if there was no statistically significant change in the score since last year. If there was a change leading to a statistically significant improvement in the score, the change in factor score is written in green text and has a green asterisk. If there was a change leading to a statistically significant decline in the score, the change in factor score is written in red text and has a red asterisk. This measure complements the numerical scores and rankings presented in this report, which benchmark each country's current performance on the factors and sub-factors of the Index against that of other countries. The measure of change over time is constructed in three steps:

1. First, last year's scores are subtracted from this year's to obtain, for each country and each factor, the annual difference in scores.
2. To test whether the annual changes are statistically significant, a bootstrapping procedure is used to estimate standard errors. To calculate these errors, 100 samples of respondent-level observations (of equal size to the original sample) are randomly selected with replacement for each country from the pooled set of respondents for last year and this year. These samples are used to produce a set of 100 country-level scores for each factor and each country, which are utilized to calculate the final standard errors. These errors—which measure the uncertainty associated with picking a particular sample of respondents—are then employed to conduct pair-wise t-tests for each country and each factor.
3. Finally, to illustrate the annual change, a measure of change over time is produced based on the value of the annual difference and its statistical significance (at the 10 percent level).

Strengths and Limitations

The Index methodology has both strengths and limitations. Among its strengths is the inclusion of both expert and household surveys to ensure that the findings reflect the conditions experienced by the population. Another strength is that it approaches the measurement of rule of law from various angles by triangulating information across data sources and types of questions. This approach not only enables accounting for different perspectives on the rule of law, but it also helps to reduce possible bias that might be introduced by any other particular data collection method. Finally, it relies on statistical testing to determine the significance of the changes in the factor scores over the last year.

4 Botero, J. and Ponce, A. (2011) "Measuring the Rule of Law": WJP Working Paper No. 1, available at worldjusticeproject.org/publications.

With the aforementioned methodological strengths come a number of limitations. First, the data sheds light on rule of law dimensions that appear comparatively strong or weak, but is not specific enough to establish causation. Thus, it will be necessary to use the Index in combination with other analytical tools to provide a full picture of causes and possible solutions. Second, in previous editions of the Index, the methodology has only been applied in three major urban areas in each of the indexed countries for the General Population Poll. However, the World Justice Project's goal was to update its methodology to include nationally representative polls. Towards this end, nationally representative polls have been conducted in 77 countries and jurisdictions covered in the 2021 *WJP Rule of Law Index*. Nationally representative polls will be conducted in the remaining countries in future editions of the Index. Third, given the rapid changes to the rule of law occurring in some countries, scores for some countries may be sensitive to the specific points in time when the data was collected. To address this, the WJP is piloting test methods of moving averages to account for short-term fluctuations. Fourth, the QRQ data may be subject to problems in measurement error due to the limited number of experts in some countries, resulting in less precise estimates. To address this, the WJP works constantly to expand its network of in-country academic and practitioner experts who contribute their time and expertise to this endeavor. Finally, due to the limited number of experts in some countries (which implies higher standard errors) and the fact that the GPP is carried out in each country every few years (which implies that for some countries, some variables do not change from one year to another), it is possible that the test described above fails to detect small changes in a country's situation over time.

Other Methodological Considerations

A detailed presentation of the methodology, including a table and description of the more than 500 variables used to construct the Index scores, is available at: worldjusticeproject.org and in Botero, J. and Ponce, A. (2011) "Measuring the Rule of Law": WJP Working Paper No.1, available at: worldjusticeproject.org/publications.

Using the *WJP Rule of Law Index*

The *WJP Rule of Law Index* has been designed to offer a reliable and independent data source for policy makers, businesses, non-governmental organizations (NGOs), and other constituencies to assess a country's adherence to the rule of law as perceived and experienced by the average person, identify a country's strengths and weaknesses in comparison to similarly situated countries, and track changes over time. The Index has been designed to include several features that set it apart from other indices and make it valuable for a large number of countries, thus providing a powerful resource that can inform policy debates both within and across countries. However, the Index's findings must be interpreted in light of certain inherent limitations.

1. The *WJP Rule of Law Index* does not identify priorities for reform and is not intended to establish causation or to ascertain the complex relationship among different rule of law dimensions in various countries.
2. The Index's rankings and scores are the product of a rigorous data collection and aggregation methodology. Nonetheless, as with all measurements, they are subject to measurement error.
3. Given the uncertainty associated with picking a particular sample of respondents, standard errors have been calculated using bootstrapping methods to test whether the annual changes in the factor scores are statistically significant.
4. Indices and indicators are subject to potential abuse and misinterpretation. Once released to the public, they can take on a life of their own and be used for purposes unanticipated by their creators. If data is taken out of context, it can lead to unintended or erroneous policy decisions.
5. Rule of law concepts measured by the Index may have different meanings across countries. Users are encouraged to consult the specific definitions of the variables employed in the construction of the Index, which are discussed in greater detail in the methodology section of the *WJP Rule of Law Index* website.
6. The Index is generally intended to be used in combination with other instruments, both quantitative and qualitative. Just as in the areas of health or economics, no single index conveys a full picture of a country's situation. Policy-making in the area of rule of law requires careful consideration of all relevant dimensions—which may vary from country to country—and a combination of sources, instruments, and methods.
7. Pursuant to the sensitivity analysis of the Index data conducted in collaboration with the Econometrics and Applied Statistics Unit of the European Commission's Joint Research Centre, confidence intervals have been calculated for all figures included in the *WJP Rule of Law Index*. These confidence intervals and other relevant considerations regarding measurement error are reported in Saisana and Saltelli (2015) and Botero and Ponce (2011).

The following pages (184-187) list the coverage and polling methodology for the GPP in the 139 indexed countries and jurisdictions.

Contributing Experts

The *WJP Rule of Law Index 2021* was made possible by the generous contributions of academics and practitioners who contributed their time and expertise. The names of those wishing to be acknowledged individually are listed below.

This report was also made possible by the work of the polling companies who conducted fieldwork, and the thousands of individuals who have responded to the General Population Poll around the world.

About the World Justice Project

The World Justice Project (WJP) is an independent, multidisciplinary organization working to create knowledge, build awareness, and stimulate action to advance the rule of law worldwide. Effective rule of law reduces corruption, combats poverty and disease, and protects people from injustices large and small. It underpins development, accountable government, and respect for fundamental rights, and it is the foundation for communities of justice, opportunity, and peace.

Our Approach

Traditionally, the rule of law has been viewed as the domain of lawyers and judges. However, everyday issues of safety, rights, justice, and governance affect us all; everyone is a stakeholder in the rule of law. Based on this, the WJP builds and supports a global, multi-disciplinary movement for the rule of law by:

1. Collecting, organizing, and analyzing

original, independent rule of law data, including the *WJP Rule of Law Index*;

2. Supporting research, scholarship, and teaching

about the importance of rule of law, its relationship to development, and effective strategies to strengthen it; and

3. Connecting and building an engaged global network of policy-makers and advocates to advance the rule of law through strategic partnerships, convenings, coordinated advocacy, and support for locally-led initiatives, including through the Resource Hub, a directory of leading organizations advancing the rule of law worldwide; the World Justice Challenge, a competition to identify, recognize, and promote good practices and successful solutions for strengthening the rule of law worldwide; and the World Justice Forum.

Honorary Chairs

The World Justice Project has the support of outstanding leaders representing a range of disciplines around the world. The Honorary Chairs of the World Justice Project are:

Madeleine Albright; Giuliano Amato; Robert Badinter; James A. Baker III; Cherie Blair; Stephen G. Breyer; Sharan Burrow; David Byrne; Jimmy Carter; Maria Livanos Cattai; Hans Corell; Hilario G. Davide, Jr.; Hernando de Soto; Adama Dieng; Richard J. Goldstone; Kunio Hamada; Lee H. Hamilton; Mohamed Ibrahim; Tassaduq Hussain Jilani; Anthony M. Kennedy; Beverley McLachlin; George J. Mitchell; Sandra Day O'Connor; Ana Palacio; Colin L. Powell; Roy L. Prosterman; Richard W. Riley; Mary Robinson; Desmond Tutu; Antonio Vitorino; Harold Woolf; and Andrew Young.

Board of Directors

Shaikha Abdulla Al-Misnad; Kamel Ayadi; William C. Hubbard; Hassan Bubacar Jallow; Suet-Fern Lee; Mondli Makhanya; M. Margaret McKeown; John Nery; William H. Neukom; Ellen Gracie Northfleet; and James R. Silkenat.

Directors Emeriti

Ashraf Ghani Ahmadzai
Emil Constantinescu
Petar Stoyanov
