

+++Press Release +++ GreenPocket & KISTERS

Smart metering technology with lasting customer benefits

## **GreenPocket and KISTERS become partners for smart metering**

**Cologne/ Aachen, Germany, Dec. 21, 2010 – GreenPocket GmbH, a specialist in software for the interpretation and presentation of energy consumption data, and KISTERS AG, a leading system provider for the energy industry, will in future jointly offer innovative smart metering software solutions.**

As a result of the cooperation agreement, GreenPocket will increase its sales reach and add complementary solutions to its product portfolio. In return, KISTERS will receive the entire range of GreenPocket solutions for the interpretation and visualization of smart metering consumption data – including the GreenPocket web portal and iPhone/ iPod applications.

Background information: In the long run, smart metering works only if energy consumers are convinced by the new technology. Consequently, GreenPocket and KISTERS will now jointly offer utility companies intelligent solutions that allow personal and commercial customers to optimize individual user behavior and as a result reduce energy costs and CO2 output.

Christoph Roenick of KISTERS is very pleased with the conclusion of the cooperation agreement: "Both KISTERS and GreenPocket will benefit from this collaboration. The two companies complement each other perfectly in the range of products and services offered and are therefore able to offer customers from the energy industry an integrated solution in the complex subject area of smart metering."

“The trust KISTERS is placing in GreenPocket proves that we reliably meet customer requirements with our product portfolio“, comments Dr. Thomas Goette, CEO of GreenPocket. “By collaborating with KISTERS we are able to convince other customers of the lasting benefits smart metering technology offers.“

### **About KISTERS**

As an IT group of companies, KISTERS operates in the area of energy, water and air quality. KISTERS has equipped 600 utility companies in the area of networking, distribution, trading and energy generation. The energy market system BelVis is the market leader in Energy Data Management for electricity and gas. BelVis offers comprehensive solution components for portfolio management, supply calculations and profit contribution calculations, as well as forecasting and resource optimization right through to multi-utility and virtual generating plants, for smart metering and, in connection with KISTERS network control systems, for optimized operation of electricity, water and gas networks.

KISTERS systems are used worldwide, including Europe, the USA, Asia and the Pacific Region. For further details about KISTERS please visit: [www.kisters.de](http://www.kisters.de)

### **About GreenPocket**

GreenPocket is a software provider offering utility companies and trade customers intelligent solutions for the interpretation and visualization of smart metering energy consumption data.

The centerpiece of the GreenPocket technology is the Energy Expert Engine (EEE), which uses algorithmic and heuristic processes to enable the intelligent interpretation of energy and water consumption data. Energy monitoring tools enable this data to be visualized via web portals, wall-mounted devices or iPhone applications in a consumer-friendly and trendsetting way.
