Before using NeuralBaccarat AI baccarat prediction software read carefully the manual detailed below, all the information necessary to perfectly handle this powerful software is detailed here.

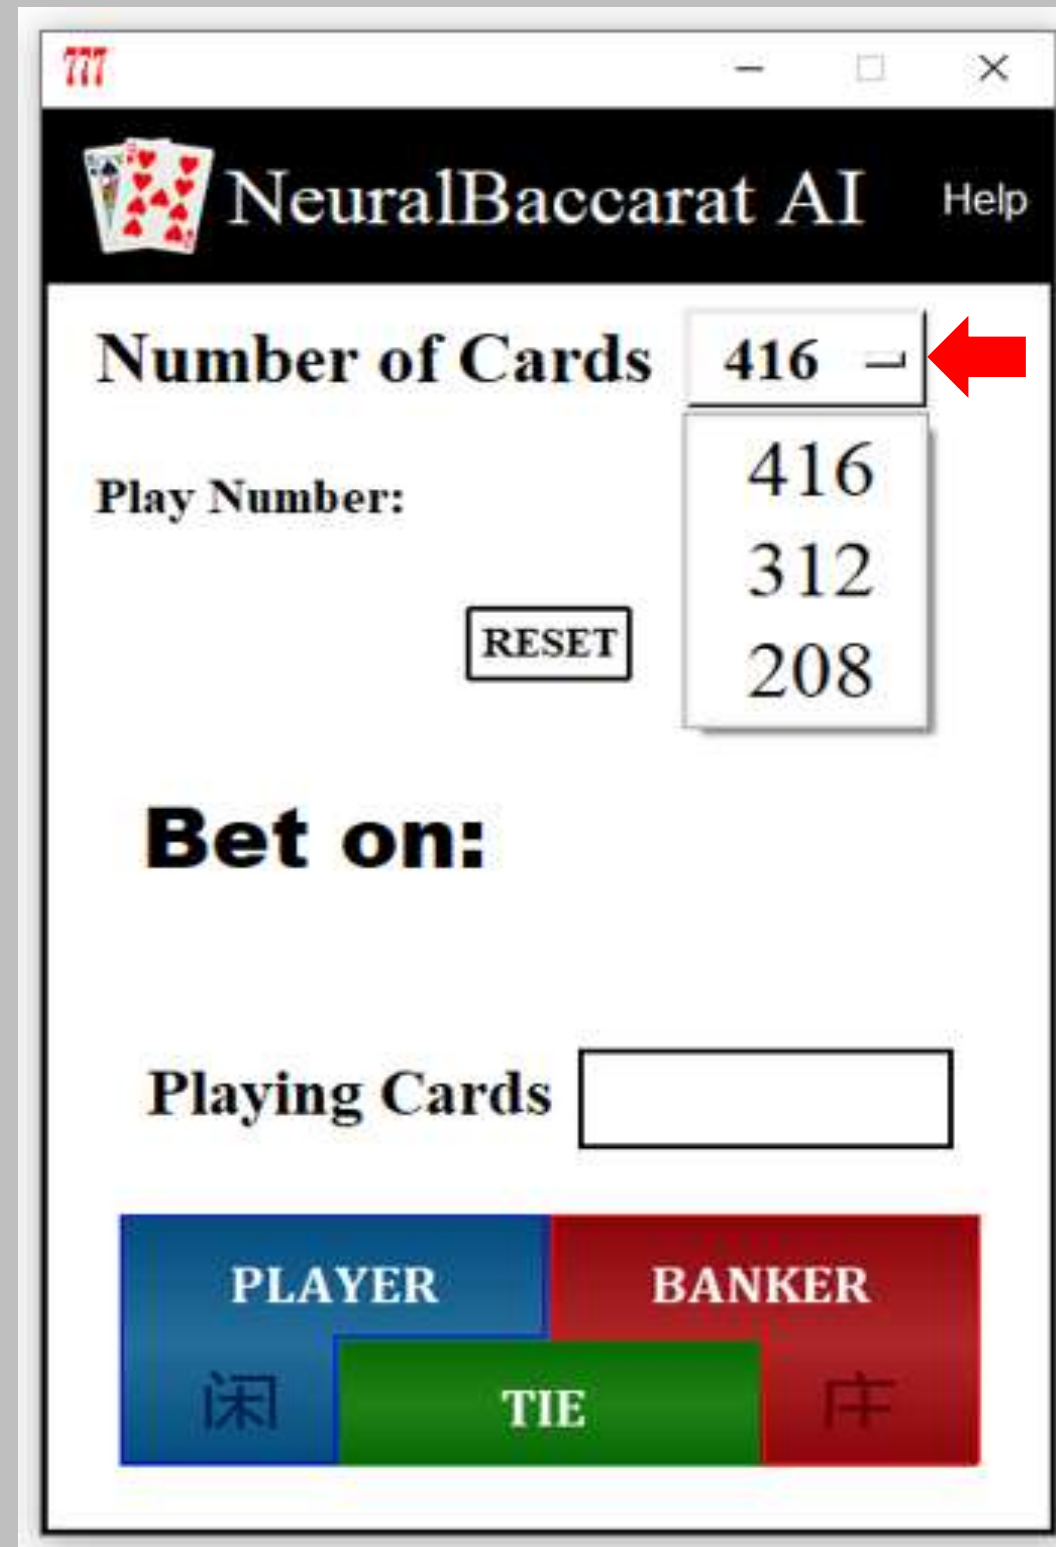

1. Help: Pressing the "Help" button will display a quick help window to remind you of the most important points on how to use "NeuralBaccarat AI".

You can press "Help" any time you need to remember important details on how to use this tool.

2. Number of Cards: By clicking on the "Number of Cards" button you will be shown 3 options for the number of cards in the playing shoe, usually in all casinos around the world 416 playing cards are used, this means that you will always select this number of playing cards.

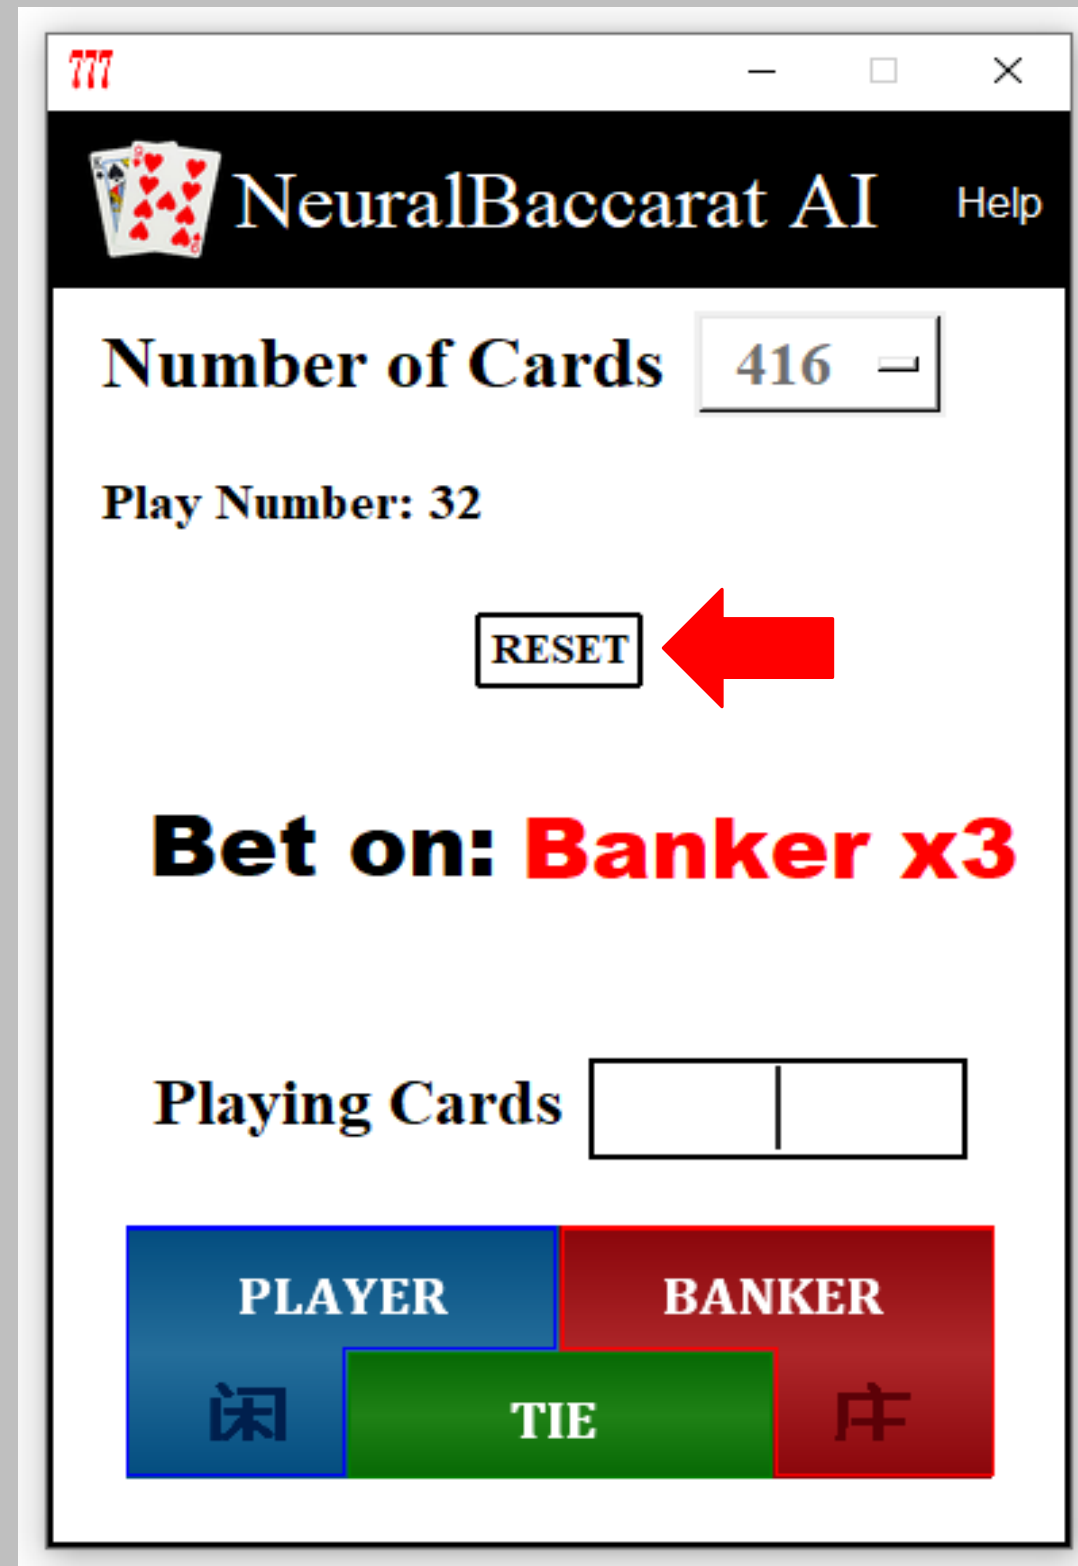

Unless you are absolutely sure that the number of playing cards is 312 or 208, then select that number.

3. **Play Number:** Shows you the number of plays that have occurred so far.

4. **Reset:** *Warning*, pressing the Reset button deletes all data entered, it should only be pressed if you are sure that you have made a mistake in entering the playing cards or in the selection of the Number of Cards.

5. Bet On: In this area, it will be clearly displayed where you should place your next bet, that is: Banker, Player, and/or Tie.

Bets on both Banker and Player will be followed by the indication "x1", "x3", "x5", "x7", and "x9". This means that you should increase your bet in UNITS by the number indicated.

Example: **Banker x5**

This means that you should bet five times the minimum amount you have set to wager.

If you say your minimum unit is \$25.00 USD and on a certain play **NeuralBaccarat AI** indicates to you: "Player x3", this means that you should bet \$75.00 USD on the Player.

There may also be indications such as "Banker" or "Player" without any "x" indicator; these bets mean that you should wager the minimum amount.

Additionally, it may occur that the betting area is left blank; this means that the bet is risky and the system decides not to give any indication.

Similarly, bets on Banker and Player may come with the indication to bet on the "TIE".

Bets on the "TIE" will always be accompanied by the indication: "x1", "x2", and "x3", just as previously explained, an "x1" indicator means to bet 1 unit on the TIE, and likewise, an "x3" indicator means to bet 3 units on the TIE as previously explained.

We show some of the possible bets that **NeuralBaccarat AI** will present to you on screen:

6. Playing Cards: This area is where you will enter the play-by-play values of the playing cards as they come out of the playing shoe.

Important note #1: playing cards are scored as follows:

10, J, Q, K = these cards are scored as 0 (zero).

2,3,4,5,6,7,8,9 = they are scored as they are.

A (Ace) = this card is scored as 1

Every time you enter a set of playing cards (1 set = the playing cards that make up a Baccarat hand), you must press the "**enter**" key on your keyboard and wait for the system (**NeuralBaccarat AI**) to process this entry, then proceed to press the button for the winning play (Banker, Player, Tie).

To prevent malfunction:

Every time you see the symbol  (blue spinning circle) **over the buttons 'Banker', 'Player', or 'Tie'**, you must wait for it to disappear before selecting the button for the winning play.

The symbol  indicates that the Neural Baccarat AI is processing information. Interrupting this process could cause the application to malfunction. Depending on the capacity and resources of your computer, this symbol  may or may not appear. The symbol that indicates you can now write in this area is 

Every time you notice the symbol  (hand cursor) or  (arrow cursor) **over the box where the playing cards are entered**, you should wait for it to disappear before typing in the playing cards. The symbol  or  indicates that the Neural Baccarat AI is processing information. Interrupting this process could cause the application to malfunction. Depending on the capacity and resources, this symbol  or  may or may not appear. The symbol that indicates you can now write in this area is  (I-beam pointer).

Another way to know when you can press the "Banker", "Player", "Tie" buttons is when the numbers you entered in the "Playing Cards" box have disappeared.

It is very important that you read and follow these instructions exactly as they are expressed here, and do not confuse terms or symbols.

******Altering or rushing this process can cause NeuralBaccarat AI to malfunction.***

Attention: remember that the playing cards are written without commas and without spaces, for example: 03971 the order of writing the playing cards does not matter.

Important note #2: Baccarat777 makes important mention of this detail since bad input of the cards can generate malfunctioning of the program and in the worst case bad predictions.

Baccarat777 clarifies: the speed at which the entry of the playing cards and subsequent entry of the winning play is processed will depend (as mentioned on our website) on the speed and capacity of your computer.

Remember that NeuralBaccarat AI is an artificial intelligence model that needs to be trained with data from the online casino of your choice. Optimal results are clearly noticeable after 5 sessions or 5 complete shoe games in Baccarat.

7. Player, Tie, Banker Buttons: These buttons are used to indicate to **NeuralBaccarat AI** which was the winning play. This information is important to determine whether the prediction was correct or not, allowing NeuralBaccarat AI to learn from each hand (training its neural networks) based on mistakes and successes, refining its performance as the amount of data becomes more extensive. These buttons should only be pressed after the playing cards have been entered.

Summary of how to install and use "NeuralBaccarat AI":

Once you have downloaded the product to your computer, proceed to install it, this process is totally simple and guided by the installer.

Just accept the terms and conditions, then you will be asked where to install (this part we recommend to leave it as it comes from factory), you will be asked if you want to "Create a desktop shortcut", you proceed to check the box.

Once the app is installed, you will be asked if you want to run "NueralBaccarat AI".

- Remember that you must write down all the playing cards that come out of the playing shoe, the order of writing the playing cards does not matter.
- Every time you write the data of a Baccarat play (the playing cards) you must press the "Enter" key on your keyboard.
- **Attention:** You must wait for the entered playing cards to be processed after pressing the "enter" key on your keyboard.
- Press the button corresponding to the winning play (Banker, Player, Tie) and wait for the system to indicate the next winning play.

NeuralBaccarat AI is an application that performs computationally intensive operations, such as neural network training and reading extensive data files, thus requiring optimal technical specifications. The recommended characteristics to run such an application are detailed below:

Baccarat777 clarifies:

Processor: A high-end processor, preferably with multiple cores and threads, is needed to efficiently handle complex calculations and intensive multitasking.

RAM Memory: A significant amount of RAM is crucial to facilitate the rapid processing of large data sets and to maintain performance during network training operations.

Graphics Card: To accelerate neural network calculations, a dedicated GPU with support for deep learning operations is highly recommended, but not mandatory.

Operating System and Software: An updated operating system (Windows 8 or higher) and compatibility with the latest versions of machine learning libraries are essential to ensure compatibility and performance.

Internet Connection: For future updates, registration of your App on our servers, a fast and reliable internet connection is important.

******Baccarat777 strongly makes the following clarification:******

This application can monopolize system resources; it is recommended to run it in an environment where it can have almost exclusive access to hardware resources.

Customer Responsibility: The customer must be aware that the purchase and use of the application is done under their own responsibility, with knowledge of the technical demands and the possible impact on system performance that we have detailed here.

You purchase **NeuralBaccarat AI** under your own responsibility in terms of execution speed, response times from the App, knowing that for optimal performance you will need to have equipment capable of running an application of this type.

If you have doubts about whether your equipment is fast, capable, and optimal enough, we recommend that you first seek advice from a computer specialist, systems engineer, or look for information on whether your system is suitable to run this type of application.

NeuralBaccarat AI is a lightweight application to install, but heavy in terms of execution.

It is important that end-users understand that these specifications are to ensure that the application functions optimally and that performance may vary depending on the specific hardware and software configuration of the system on which the application is installed.

Baccarat777 sales:

Accelerate and enhance your training process with pre-processed data for NeuralBaccarat AI.

Baccarat777 offers you exclusive data sets, including multiple "shoes" of gameplay already formatted according to the standards of leading online casinos, along with their corresponding .h5 training files. These sets are designed to seamlessly integrate with NeuralBaccarat AI, providing a direct path to optimal performance and predictive accuracy.

Gain your competitive edge today. For more information or to place an order, please contact our sales department through any of our available communication channels.

Responsibility Agreement:

When considering the acquisition of pre-processed data for NeuralBaccarat AI, it is essential to be aware of the numerous benefits and responsibilities involved:

Positive Advantages:

- 1. Precision Improvement:** High volumes of pre-processed data can significantly enhance the precision of NeuralBaccarat AI, resulting in more refined analysis and robust data-driven decision-making.
- 2. Time Savings:** By purchasing pre-processed data, you save valuable time that would otherwise be spent on data collection and initial processing, allowing you to focus on analysis and strategic application.

3. Data Quality: The data we provide have been carefully curated and formatted to ensure consistency and quality, following the standards of leading online casinos.

4. Direct Integration: Our data sets are designed for smooth integration with NeuralBaccarat AI, facilitating a quick and efficient start on your path to optimal results.

Important Considerations:

1. Processing Capacity: Before acquiring large volumes of data, ensure that your equipment has the necessary processing capacity to handle them without significant system slowdowns.

2. Application Response Time: A greater quantity of data may imply longer response times while the application processes the information. This factor should be considered in your usage planning.

By purchasing pre-processed data, you accept and acknowledge these considerations, assuming the responsibility to use them in a suitable environment and under your own judgment. We are here to assist you at all times and ensure that your experience is as beneficial as possible.

For more details, personalized advice, or to proceed with your order, please do not hesitate to contact our sales department. We are committed to your success.

As always, Baccarat777 recommend players to use the software responsibly and remember that gambling should be undertaken with moderation. Each game of Baccarat, like all casino games, should be approached with a solid and responsible strategy.
