	Comprehension:
	Read the passage and answer the following questions: Water is a vital resource essential for human survival. Over the past century, global freshwater use has surged six-fold and continues to grow by about 1% annually. This rising demand has brought serious challenges to water quality. Industrialisation, agriculture, and urbanisation have contributed to environmental pollution, affecting rivers and oceans and ultimately posing risks to human health and sustainable development. An alarming 80% of industrial and municipal wastewater worldwide is discharged into the environment without treatment, especially in less developed countries with poor sanitation infrastructure. The main sources of water pollution include industrial processes, agricultural activities, natural factors and inadequate water treatment facilities. Industries such as distilleries, tanneries, textiles, food processing, pulp and paper and iron and steel release harmful pollutants like arsenic, cadmium, chromium and volatile organic chemicals into water bodies when waste is not properly treated. Urbanisation and foreign direct investment can further increase industrial wastewater in developing nations. Agriculture is another major contributor to water pollution. Pesticides, fertilisers, organic waste, and soil sediments enter water systems, contaminating them with nitrates, phosphates, salts and pathogens. In water-scarce regions, untreated or partially treated wastewater is commonly used for irrigation, further endangering health and the environment.

India is a major global player in agriculture, serving as the primary livelihood for nearly 55% of its population. It has the world's largest cattle herd (buffaloes) and the largest cultivated areas for wheat, rice, and cotton. India is also the top producer of milk, pulses, and spices, and ranks second in producing fruits, vegetables, sugarcane, tea, farmed fish, cotton, wheat, and rice. With the second largest agricultural land globally, the sector plays a crucial role in employment and food security, making farmers central to national sustenance.
India's food industry is experiencing rapid growth and contributes significantly to global food trade. The food processing industry, in particular, has enormous potential for value addition. It makes up 32% of India's total food market and is one of the largest industries in terms of production, consumption, export, and anticipated expansion, ranking fifth overall.
In 2022–23, India's food grain production reached 330.5 million metric tons (MT), according to the third advance estimate. The country is the world's second-largest producer of grains, fruits, and vegetables, and the second-largest sugar exporter. For the Kharif Marketing Season (KMS) 2023–24, rice procurement is expected to reach 521.27 LMT, up from 496 LMT in 2022–23.

Comprehension:

Read the passage carefully and answer the questions that follow.

India is a major global player in agriculture, serving as the primary livelihood for nearly 55% of its population. It has the world's largest cattle herd (buffaloes) and the largest cultivated areas for wheat, rice, and cotton. India is also the top producer of milk, pulses, and spices, and ranks second in producing fruits, vegetables, sugarcane, tea, farmed fish, cotton, wheat, and rice. With the second largest agricultural land globally, the sector plays a crucial role in employment and food security, making farmers central to national sustenance.
India's food industry is experiencing rapid growth and contributes significantly to global food trade. The food processing industry, in particular, has enormous potential for value addition. It makes up 32% of India's total food market and is one of the largest industries in terms of production, consumption, export, and anticipated expansion, ranking fifth overall.
In 2022–23, India's food grain production reached 330.5 million metric tons (MT), according to the third advance estimate. The country is the world's second-largest producer of grains, fruits, and vegetables, and the second-largest sugar exporter. For the Kharif Marketing Season (KMS) 2023–24, rice procurement is expected to reach 521.27 LMT, up from 496 LMT in 2022–23.

	Comprehension:
	Read the given passage and answer the questions that follow. Modern power systems are advancing toward sustainability as domestic electricity demand increases due to the growing use of household appliances and electric vehicles. Residential and commercial buildings consume nearly 60% of the world's electricity. With the integration of modern communication technologies, power systems have become more complex and intelligent, enhancing the convenience and security of grid operations. However, daily electricity consumption remains inconsistent and unpredictable. It varies with seasons, differs between weekdays and weekends, and may include unusual spikes caused by factors such as malfunctioning appliances, forgotten devices left running, or electricity theft. These irregularities pose significant challenges to maintaining energy efficiency and stable grid operations. Detecting abnormal energy consumption is essential for improving energy use. It can help identify faulty appliances, encourage better usage habits, reduce electricity bills and promote greater safety awareness among users. Most importantly, it plays a key role in identifying electricity theft, which is a major contributor to energy loss in many developing countries. Abnormal consumption detection not only enhances the overall efficiency of power systems but also supports conservation efforts and combats energy theft, thereby ensuring a more reliable and secure electricity supply.

	Read the given passage carefully and answer the questions that follow. Ravi lived in a coastal village where the sea whispered stories each evening. As a child, he would fold paper boats and float them on the tide, pretending they carried messages to the world. His grandfather always watched, smiling, and told him, “The sea always remembers kindness". Years passed. Ravi grew up, moved to a city, and got busy with work. But when his grandfather passed away, Ravi returned to the village. One evening, lost in thought, he folded a boat from an old newspaper and sent it into the sea. To his surprise, the next morning, he found a small seashell and a note inside another paper boat at the shore. It read, 'Kindness comes back—just like the tide'. Ravi smiled. That evening, he made another paper boat, and then another. The tradition returned, and so did a sense of peace. To this day, people say the sea near Ravi’s village carries not just waves—but whispers of kindness floating in tiny boats.

Comprehension:

Read the passage carefully and answer the questions that follow.

Clean water is essential for all living things. Humans need it for drinking, cooking, and cleaning, while animals and plants rely on it for survival. However, in many parts of the world, people still lack access to safe, clean water. Contaminated water can lead to diseases like cholera and typhoid, which can be deadly.
Pollution from factories, farms, and household waste often ends up in rivers and lakes. In developing countries, poor sanitation and lack of infrastructure make the problem worse. When people drink or bathe in polluted water, it can cause serious health problems and harm the environment.

Organisations around the world are working to improve water quality. Solutions include building wells, purifying water with filters, and educating communities on hygiene. Governments are also passing laws to prevent industries from dumping waste into water sources. Clean water is a basic human right. Ensuring access to it improves health, supports development, and protects ecosystems. Every individual has a role to play in using water wisely and preventing pollution.

Comprehension:

Read the given passage and answer the questions that follow.

The term ‘mathematics’ is rooted in the Greek word ‘mathemata’, which originally referred to any subject of instruction or study. As intellectual pursuits expanded, the term's meaning narrowed to focus on specific fields. The Pythagoreans are credited with using mathematics to collectively describe arithmetic and geometry—disciplines that had previously been treated as separate. This association may have contributed to the belief that mathematics originated in Classical Greece between 600 and 300 B.C. However, the history of mathematics extends far beyond that period. Ancient civilisations such as Egypt and Babylonia, three to four thousand years ago, already possessed a substantial body of mathematical knowledge. When mathematics is broadly defined as the study of number, size, order and form—concepts related to quantity and space—it becomes evident that mathematical thinking has been integral to human life since prehistoric times. In every era and culture, people have demonstrated a profound desire to understand, measure and explain the natural world around them. This enduring curiosity reflects humanity’s quest for knowledge and order. As the poet Alexander Pope insightfully wrote, “This mighty maze is not without a plan,” capturing the essence of mathematics as a tool to uncover structure and meaning within the complexity of the universe.

	Read the given passage carefully and answer the questions that follow. Every evening, Kabir, a retired schoolteacher, walked to the local park with a small chalk piece in his pocket. While others came to jog or play, Kabir would quietly draw a line on the pavement—just a single straight line near the fountain. People noticed but never asked. Some thought it was a habit, others thought it strange. One day, a little boy asked, "Why do you draw the same line every day?" Kabir smiled. "It's a reminder," he said, "that no matter how messy life gets, we can always start with a straight line." The boy returned the next day with his own chalk. Soon, others joined in. The walkway became filled with lines—curvy, zigzag, short, long—each one unique. What started as a quiet ritual became a small celebration of hope and new beginnings. Even now, when Kabir no longer visits, people continue drawing—one line at a time.

	Read the given passage and answer the questions that follow. Innovations in agriculture are critical for ensuring long-term food security in an increasingly unpredictable world. As global populations rise and climate change disrupts traditional farming methods, modern technologies offer hope for sustainable solutions. Precision farming, drought-resistant seeds, vertical farming and AI-powered data analysis are transforming how food is grown and distributed. One major benefit of agricultural innovation is increased productivity with fewer resources. For instance, drip irrigation and smart sensors help farmers monitor soil conditions, reducing water waste and boosting yields. Biotechnology also enables the development of crops that resist pests and diseases, minimising the need for harmful chemicals. However, the adoption of these technologies is uneven. Many small-scale farmers in developing countries lack access to modern tools and training. Bridging this gap is essential to prevent further inequality in food production and distribution. Governments and global institutions must support agricultural research and provide funding, education and infrastructure to rural communities. Ensuring food security is not just a technical challenge—it is a moral obligation. Innovations must be accessible, affordable and adapted to local contexts for a hunger-free future.

	Comprehension:
	Read the given passage carefully and answer the question that follows. In a small hill town, evenings descended slowly, wrapping the streets in a gentle stillness as the sun vanished behind the distant mountains. Maya cherished these quiet hours, sitting by her window where even the birds seemed to pause their singing. One such evening, a faint tune floated across the air. It came from an old violin, played by a stranger on the deserted road below. Though she couldn't see him clearly, the melody reached deep into her soul. It wasn't entirely joyful nor sorrowful but carried an unusual comfort, like the warmth of a familiar memory. As the tune ended abruptly, a profound silence enveloped the surroundings. Maya listened intently and felt the silence itself hum softly, as though it contained its own secret music. For the first time, she realised that not all melodies require instruments; sometimes, silence creates a symphony too subtle for words.

Comprehension:

Read the passage and answer the following questions:

In 2020, the Indian government launched the National Action Plan for Toys to encourage domestic manufacturing and support toy and handicraft producers. The plan revolves around four key themes: boosting trade and investment, encouraging local design and production, promoting indigenous toys and using toys as educational tools. Free Trade Agreements (FTAs) with countries such as the UAE and Australia further helped Indian toy makers by enabling zero-duty exports.
India's toy industry is currently valued at $3 billion, a modest share of the $108 billion global market. The domestic sector remains largely unorganised, with around 4,000 small and medium enterprises accounting for most of the production. Only 10% of the market belongs to the organised sector. Despite limited scale, startups like Play Shifu, Kitsons, Shumee Toys, The Elefant, DICE Toy Labs and Nesta Toys are introducing innovative ideas. Playgro is setting up one of the country's largest toy manufacturing units in Ujjain, Madhya Pradesh. Aequs, based in Belagavi, is building a 400-acre toy cluster in Koppal, Karnataka, already catering to brands like Hasbro and Chicco.
The industry is also seeing increased regulation. In the past year, the Bureau of Indian Standards (BIS) issued 1,454 licenses to Indian manufacturers and 36 to foreign companies, ensuring toy safety compliance.

	Comprehension:
	Read the passage and answer the following questions: In 2020, the Indian government launched the National Action Plan for Toys to encourage domestic manufacturing and support toy and handicraft producers. The plan revolves around four key themes: boosting trade and investment, encouraging local design and production, promoting indigenous toys and using toys as educational tools. Free Trade Agreements (FTAs) with countries such as the UAE and Australia further helped Indian toy makers by enabling zero-duty exports. India's toy industry is currently valued at $3 billion, a modest share of the $108 billion global market. The domestic sector remains largely unorganised, with around 4,000 small and medium enterprises accounting for most of the production. Only 10% of the market belongs to the organised sector. Despite limited scale, startups like Play Shifu, Kitsons, Shumee Toys, The Elefant, DICE Toy Labs and Nesta Toys are introducing innovative ideas. Playgro is setting up one of the country's largest toy manufacturing units in Ujjain, Madhya Pradesh. Aequs, based in Belagavi, is building a 400-acre toy cluster in Koppal, Karnataka, already catering to brands like Hasbro and Chicco. The industry is also seeing increased regulation. In the past year, the Bureau of Indian Standards (BIS) issued 1,454 licenses to Indian manufacturers and 36 to foreign companies, ensuring toy safety compliance.

	Read the passage carefully and answer the questions that follow. Sleep is a vital, yet often neglected, part of our daily routine. It plays a crucial role in physical health, emotional well-being, and cognitive functioning. During sleep, the body undergoes essential processes like muscle repair, memory consolidation, and hormone regulation. It also supports the immune system and helps balance mood and energy levels. Chronic sleep deprivation can lead to serious health issues such as heart disease, obesity, diabetes, and depression. In today's fast-paced world, modern lifestyles—characterised by long working hours, excessive screen time, late-night social media scrolling, and heightened stress—have drastically reduced average sleep duration. Despite expert recommendations of 7–9 hours of sleep for adults, many struggle to meet this target due to packed schedules and unhealthy sleep habits. Prioritising sleep is essential. Fortunately, simple adjustments can lead to significant improvements. Establishing a consistent bedtime routine, minimising caffeine and alcohol intake in the evening, and creating a calming sleep environment—cool, dark, and quiet—can promote more restful sleep. Avoiding screens before bed, particularly smartphones and computers, helps prevent disruptions to the body's natural sleep-wake cycle.

	Read the given passage and answer the questions that follow. On her twelfth birthday, Tara wrote a note that said, "I hope someone out there is smiling today." She tied it to a bright red balloon and released it into the sky from her backyard. She watched it float higher, disappearing into the clouds. Weeks passed. Then one afternoon, a letter arrived for Tara. It was from a boy named Zain, who lived 200 miles away. He had found her balloon caught in a tree outside his school. In his letter, he wrote, "Your message made my bad day better. Thank you." Excited, Tara wrote back. Soon, they became pen pals. They shared stories, drawings, jokes and hopes. The simple balloon had built a bridge between two strangers. Their friendship lasted for years. They never met in person, but each letter reminded them that kindness has wings—and can travel farther than we think. Even today, Tara keeps the red balloon string in a box, a small memory of how one small message changed two lives.

	Comprehension:
	Read the given passage and answer the questions that follow. On her twelfth birthday, Tara wrote a note that said, "I hope someone out there is smiling today." She tied it to a bright red balloon and released it into the sky from her backyard. She watched it float higher, disappearing into the clouds. Weeks passed. Then one afternoon, a letter arrived for Tara. It was from a boy named Zain, who lived 200 miles away. He had found her balloon caught in a tree outside his school. In his letter, he wrote, "Your message made my bad day better. Thank you." Excited, Tara wrote back. Soon, they became pen pals. They shared stories, drawings, jokes and hopes. The simple balloon had built a bridge between two strangers. Their friendship lasted for years. They never met in person, but each letter reminded them that kindness has wings—and can travel farther than we think. Even today, Tara keeps the red balloon string in a box, a small memory of how one small message changed two lives.

	Read the passage carefully and answer the questions based on it. Forests are home to more than 80% of the world's land animals and plants. However, these vital ecosystems are vanishing rapidly due to human activities like logging, mining and agriculture. When trees are cut down in large numbers—called deforestation—entire habitats are destroyed. This leads to the loss of biodiversity and affects global climate patterns. Deforestation also contributes to increased carbon dioxide levels, a major cause of climate change. Without trees to absorb carbon, more of it stays in the atmosphere, trapping heat. Efforts to combat deforestation include reforestation (planting new trees) and using sustainable resources. Many governments and environmental organisations have launched campaigns to protect forests. Still, illegal logging continues in many regions, especially in the Amazon Rainforest. People around the world are encouraged to reduce paper waste, support eco-friendly companies and plant trees in their communities. Forests are not just patches of trees; they are essential to the planet's health. Saving them is not only an environmental issue but a human one as well.

	Read the passage below and answer the questions that follow. In the aftermath of devastation, Mira surveyed what remained of her childhood home—charred beams, collapsed walls, and memories reduced to ash. The wildfire had consumed everything except her grandmother's cast-iron skillet and a single family photograph, somehow preserved amid the destruction. Once, Mira had dreamed of escaping this remote valley, but now, staring at the ruins, she felt unexpectedly anchored. Her neighbours, themselves reeling from loss, arrived with tools, food, and determination. Old rivalries dissolved as the community united in rebuilding. Professor Jenkins, who had rarely spoken to anyone, organised shelter accommodations. Teenager Ava, once ridiculed for her withdrawn nature, revealed remarkable architectural skills. Mira discovered leadership abilities she hadn't known she possessed, coordinating restoration efforts. Though the physical landscape remained scarred, the human landscape transformed. In the spaces between devastation and renewal, they found something previously invisible—a resilience that transcended individual survival.

	Read the given passage and answer the questions that follow. In a small mountain village lived a boy named Aman who loved collecting sounds. While other children collected stamps or coins, Aman walked around with a glass jar, trying to "capture" sounds. Of course, the jar couldn't really hold anything—but Aman believed it did. He'd run near the waterfall and close the jar quickly, claiming he'd caught the splash. He'd visit the temple during evening prayers and seal the jar after the bell rang. His friends laughed, but Aman smiled. "One day, I'll hear them again," he'd say. Years passed. Aman moved to the city and became a music composer. On hard days, he'd open his empty jars, close his eyes and smile. The sounds weren't really there, but the memories were. The laughter of friends, the rush of the stream, the chime of bells—all played inside his mind, shaping his melodies. And so, a jar that once held nothing helped create music that touched hearts around the world.

	Comprehension:
	Read the given passage and answer the questions that follow. In a small mountain village lived a boy named Aman who loved collecting sounds. While other children collected stamps or coins, Aman walked around with a glass jar, trying to "capture" sounds. Of course, the jar couldn't really hold anything—but Aman believed it did. He'd run near the waterfall and close the jar quickly, claiming he'd caught the splash. He'd visit the temple during evening prayers and seal the jar after the bell rang. His friends laughed, but Aman smiled. "One day, I'll hear them again," he'd say. Years passed. Aman moved to the city and became a music composer. On hard days, he'd open his empty jars, close his eyes and smile. The sounds weren't really there, but the memories were. The laughter of friends, the rush of the stream, the chime of bells—all played inside his mind, shaping his melodies. And so, a jar that once held nothing helped create music that touched hearts around the world.

Comprehension:

Read the passage carefully and answer the questions that follow.

Reading is one of the most powerful tools for learning, personal development, and growth. Whether it's fiction, nonfiction, or poetry, books open doors to new ideas, emotions, and perspectives. People who read regularly often develop stronger vocabularies, better focus, sharper thinking, and deeper understanding of the world. In a digital age dominated by screens, distractions, and short content, reading helps us slow down and think deeply. It allows readers to connect with people from different cultures, backgrounds, and times, encouraging empathy, imagination, and critical thinking. Some studies even show that reading can reduce stress and significantly improve mental health.

Unfortunately, many people today read less than before. Busy schedules, constant notifications, and the distractions of technology make it harder to sit down with a book. Libraries, schools, and families play a key role in encouraging a lifelong love of reading. Reading is not just a hobby—it's a lifelong skill that builds knowledge, creativity, imagination, and emotional strength.

	Comprehension:
	Read the Passage carefully and answer the questions based on it. Electric vehicles (EVs) are becoming more common on roads worldwide. Unlike traditional cars, which run on gasoline, EVs use electricity stored in batteries. As concerns about air pollution and climate change grow, many people are turning to cleaner transportation options. EVs produce no tailpipe emissions, meaning they don't release harmful gases into the air. This helps reduce smog in cities and lowers the amount of carbon dioxide in the atmosphere. Many governments offer incentives like tax credits to encourage people to buy EVs. However, electric vehicles also face challenges. Their batteries can be expensive, and charging stations are not always available in rural areas. Despite this, technology is improving quickly. Some companies are even working on vehicles that charge faster and go longer distances. The future of transportation is changing. As more people choose environmentally friendly vehicles, the world moves one step closer to cleaner air and a healthier planet.

	Read the given passage and answer the questions that follow. When Malala Yousafzai was born in a remote valley in Pakistan, few could have imagined the global impact she would one day make. Growing up in a society where girls' education was often discouraged, she developed a strong passion for learning, inspired by her father, who ran a small school. As extremist groups tightened their hold on the region, they began closing schools and banning girls from attending. Despite the rising danger, Malala chose to speak out. At just 11, she started writing a blog under a pseudonym, sharing her experiences under Taliban rule. Her words gained international attention but also made her a target. In 2012, she was shot in the head on her way home from school. Against all odds, she survived. Rather than retreating, Malala grew even more determined. She continued advocating for girls' education and became the youngest Nobel Peace Prize laureate. Her story is one of courage, resilience and hope—showing how one voice, no matter how young, can drive powerful change when guided by conviction and purpose.

Read the passage carefully and answer the questions that follow.

India is among the strongest military powers globally and holds strategic importance for its government. The Indian defence sector includes several prominent segments, with the largest being military fixed-wing aircraft, naval vessels and surface combatants, and missile and missile defence systems. Other vital areas include military rotorcraft, submarines, artillery, land vehicles, tactical communications, and electronic warfare. Major Indian defence manufacturers include Bharat Earth Movers Ltd. (BEML), Bharat Electronics Ltd. (BEL), and Hindustan Aeronautics Ltd. (HAL).

The defence manufacturing industry is a significant contributor to the Indian economy and is growing due to increasing national security concerns, especially with persistent border tensions involving Pakistan and China. To reduce dependency on imports and modernise the armed forces, the Indian government has launched several policy initiatives promoting indigenous production under the 'Make in India' programme.

In the Union Budget 2025-26, the Ministry of Defence received an allocation of ₹6.81 lakh crore (US$ 78.7 billion), a 9.5% rise from the previous year. ₹1.80 lakh crore was set aside for capital expenditure. An outlay of ₹7,146 crore (US$ 825.7 million) was announced towards the capital expenditures of the Border Roads Organization (BRO). India now exports defence equipment to over 75 countries.

Comprehension:

Read the passage and answer the following questions:

The Surajkund International Craft Mela, held annually in Faridabad, Haryana, is one of the world's largest craft festivals. Organised every February by the Surajkund Mela Authority and Haryana Tourism, in collaboration with various ministries, it celebrates India's rich heritage of handicrafts, handlooms, music and folk traditions. The mela hosts over 1,200 stalls with artisans from across India and over 40 countries, offering live craft demonstrations, cultural performances and interactive workshops. Each year, a specific Indian state and a partner country are featured as themes. These highlight their distinct art, culture and cuisine. Visitors can enjoy performances at open-air venues like Day Chaupal and participate in folk dances, musical shows and more. A multi-cuisine food court and amusement zones provide a complete cultural experience. The fair aims to promote dying crafts, connect artisans to markets, and simulate rural village life for urban audiences. With millions attending each year, Surajkund Mela stands as a symbol of cultural pride and global artistic exchange.
