FLIP BOOKS!

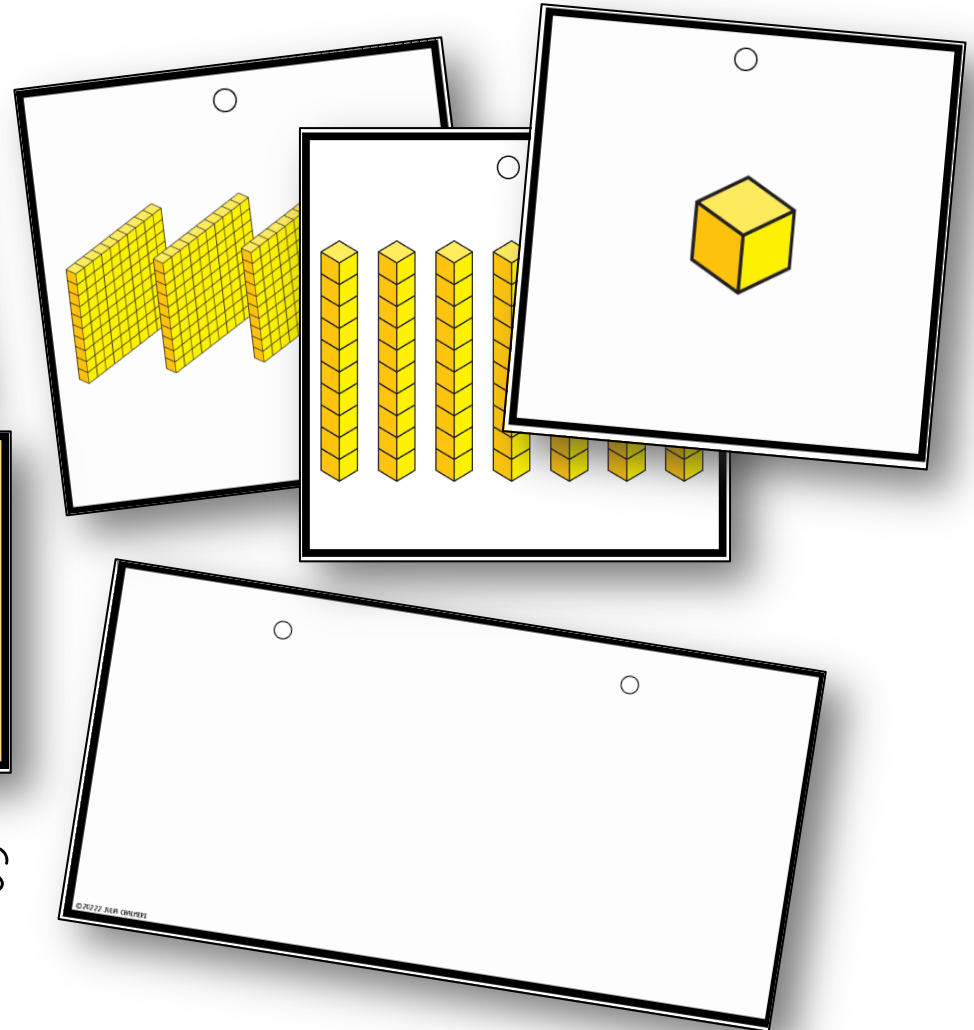

WHAT'S INCLUDED?

Cover Pages

Various options for numbers.

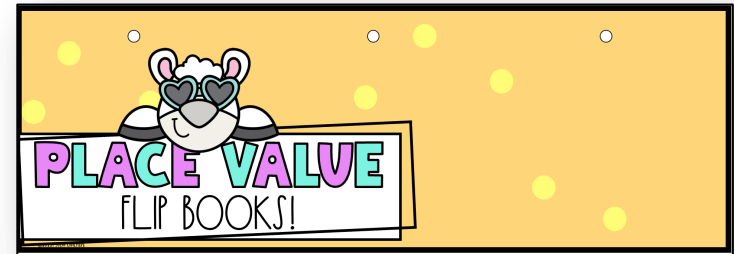

Back Covers

HOW TO ASSEMBLE

- Print the desired amount of covers and cards. There are various options included:

2-digit MAB

3-digit MAB

- Laminate your desired pages. You may choose to 'double cut' for durability, but you can also just laminate and cut the once.
- Use the guides to punch a hole through each card. Note: a single hole punch works well!
- Layer a back page, number cards and then cover, and secure with a binder ring (or something else, like ribbon). Repeat for the remaining cards.

Use these flip books in math centres, as a rotation or as early finishers.

Students use number cards or playing cards to create a number, they then flip the MAB to represent the number. You can also pair them with other resources, like rolling a dice to create a number!
