Comprehension:

Read the given passage carefully and answer the questions that follows:

Women have kick-started countless initiatives and organisations across the world that nurture female coders, like Girls Who Code, Black Girls Code and Indian Girls Code. Vandana 'Vandi' Verma was 11 years old when she got behind the wheel of her grandfather's tractor. She never imagined that someday she would navigate a rover on Mars. Today, sitting at her desk at NASA, Verma drives, programs and navigates the Curiosity rover on Mars. Using Artificial Intelligence, the rover takes images, analyses soil and rocks, and helps NASA understand the planet's past. Though Verma helps it do its job, the rover makes its own decisions.

Verma feels robots can help humans explore alien environments. When she was at Carnegie Mellon University in the USA, she designed many robots. What fascinated her was the way a robot reacted to an unexpected situation. Scientists think that Mars might have had some life form in the past, but now you don't see any. What really happened out there? Verma would like to find these answers, and she is busy developing systems for a Mars 2020 mission.

Fereshteh Forough didn't like maths one bit. She had studied literature in Iran where her Afghan parents had fled during the Soviet invasion of Afghanistan. When they moved back, Forough got into the computer science program at Herat University. She hated the first day. There were just too many numbers. The next day, she learnt about algorithms and she was hooked.

After studying computer science, Forough wanted to start something that would help make girls financially independent and more confident. She started Afghanistan's first coding school for women, Code to Inspire, from her apartment. Many women who study there have never worked on a computer before. Learning a new language—that's what coding is like for Forough. It gives you the power to create what you want and to pass on that power to others.

Comprehension:

Read the given passage carefully and answer the questions that follows:

Women have kick-started countless initiatives and organisations across the world that nurture female coders, like Girls Who Code, Black Girls Code and Indian Girls Code. Vandana 'Vandi' Verma was 11 years old when she got behind the wheel of her grandfather's tractor. She never imagined that someday she would navigate a rover on Mars. Today, sitting at her desk at NASA, Verma drives, programs and navigates the Curiosity rover on Mars. Using Artificial Intelligence, the rover takes images, analyses soil and rocks, and helps NASA understand the planet's past. Though Verma helps it do its job, the rover makes its own decisions.

Verma feels robots can help humans explore alien environments. When she was at Carnegie Mellon University in the USA, she designed many robots. What fascinated her was the way a robot reacted to an unexpected situation. Scientists think that Mars might have had some life form in the past, but now you don't see any. What really happened out there? Verma would like to find these answers, and she is busy developing systems for a Mars 2020 mission.

Fereshteh Forough didn't like maths one bit. She had studied literature in Iran where her Afghan parents had fled during the Soviet invasion of Afghanistan. When they moved back, Forough got into the computer science program at Herat University. She hated the first day. There were just too many numbers. The next day, she learnt about algorithms and she was hooked.

After studying computer science, Forough wanted to start something that would help make girls financially independent and more confident. She started Afghanistan's first coding school for women, Code to Inspire, from her apartment. Many women who study there have never worked on a computer before. Learning a new language—that's what coding is like for Forough. It gives you the power to create what you want and to pass on that power to others.

Comprehension:

Read the given passage and answer the questions that follow.

Hollywood heart-throb Brad Pitt has revealed that he suffers from facial blindness. This is a neurological disorder that causes people to find it difficult to recognise people's faces. In more serious cases, sufferers can draw a blank when seeing the face of a family member or even one's own face. The condition is called prosopagnosia. It is a little-known ailment that afflicts about 1 in 40 people. It often triggers anxiety as people feel embarrassed in social situations when they struggle to remember who people are. Sufferers tend to avoid situations in which they will meet people, and as a result become withdrawn. In extreme cases, they will be reluctant to leave their home.

Brad Pitt, 58, says he has not been officially diagnosed with prosopagnosia. He first spoke about it in 2013. He said nobody believed him when he could not recall their name. He worried that people thought he was being 'aloof, inaccessible and self-absorbed'. He said, 'People hate me because they think I'm disrespecting them'. He said he has used many strategies to get around his lack of recall. He asked acquaintances where he had met them before but said that made the situation worse. He explained, 'People were more offended. You get this thing, like, "You're being egotistical. You're being conceited".' He hopes that speaking about facial blindness will raise awareness of it.

SubQuestion No : 31

Q.31 What inference can be made about Brad Pitt's motivation for speaking about his condition?

Ans

✗ A. He wants to highlight the difficulties of being a celebrity.

✗ B. He seeks sympathy and attention from the public.

✗ C. He hopes to find a cure for prosopagnosia.

✓ D. He aims to raise awareness and reduce stigma around the disorder.

Comprehension:

Read the given passage and answer the questions that follow.

Red pandas and giant pandas share a similar name—and a love for bamboo—but they aren't closely related. Scientists think that red pandas are more closely related to weasels, raccoons and skunks. And while giant pandas spend most of their time plodding around on the ground looking for food, red pandas spend about 90 per cent of their time in the trees in the misty mountains of Nepal, Myanmar and central China, where they live.

Spending time in trees is how these animals avoid predators, such as snow leopards. Their reddish coats and white face markings provide camouflage in the red-brown moss and white lichen of trees where they live. About the only time red pandas go to the ground is to, um, go. And they scamper down tree trunks headfirst. How? They rotate their ankles 180 degrees—that's like being able to turn your foot backwards. The move gives their curved claws a better angle to hang on to the bark. Red pandas lick themselves clean, just like house cats do. Newborns hardly have any fur on the bottoms of their feet. The fur grows as they get older. Red pandas wrap their tails around themselves to keep warm in their chilly habitat. They eat about 20,000 bamboo leaves every day.

Red pandas are endangered. Their forest homes are being cut down, and poachers hunt them for their fur. And their adorableness might put them in more danger since they're ideal targets for illegal pet trade.

Luckily, people are trying to help. For instance, the Red Panda Network hires local people to be forest guardians. These panda pals keep watch over the red pandas in Nepal, replant bamboo and help paying tourists observe them without disturbing the creatures. Other organisations are using high-tech methods to track poachers. By taking a DNA sample from a red panda rescued from the black market, conservationists can learn where the animals are being taken from.

Read the given passage and answer the questions that follow.

A group of 178 men, all sharing the name Tanaka Hirokazu, convened in Tokyo on Saturday to break the Guinness World Record for the largest gathering of people with the same first and last name. The successful record attempt was organised by the Tanaka Hirokazu association. This group was established by a guy called Tanaka Hirokazu in 1994. Mr. Tanaka's inspiration came from seeing a namesake of his drafted into a professional Japanese baseball team. Ex-baseball player Tanaka Hirokazu was also part of Saturday's record meeting. The 178 new record holders span the generations, with the youngest being three years old, and the eldest being an octogenarian.

Association leader Tanaka Hirokazu, 53, was elated at breaking the world record. His association had tried twice before, in 2011 and 2017, to break the record. These attempts were thwarted largely because of the association's insistence on all participants having to have the same Chinese characters (kanji) in their name. Saturday's meeting had a more lenient criterion. The association deemed that anyone with the name Hirokazu Tanaka was eligible, regardless of the kanji used to spell their name. Mr. Tanaka reflected on his world-beating achievement. He told reporters: "I never expected we would achieve such a ridiculous record." He added that the 178 Tanakas had 'set an example of silliness'.

Comprehension:

Read the passage carefully and answer the questions that follow.

The order of planets in the solar system, starting from the one nearest to the Sun and working outwards, is as follows: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune and the possible Planet Nine.

The inner four planets closest to the Sun — Mercury, Venus, Earth and Mars — are often called 'terrestrial planets' because their surfaces are rocky. Pluto also has a rocky, albeit frozen, surface but has never been grouped with the four terrestrials. The four large outer worlds — Jupiter, Saturn, Uranus and Neptune — are sometimes called the Jovian or 'Jupiter-like' planets because of their enormous size relative to the terrestrial planets. They are also mostly made of gases like hydrogen, helium and ammonia rather than of rocky surfaces, although astronomers believe that some or all of them may have solid cores.

Jupiter and Saturn are sometimes called the 'gas giants', whereas the more distant Uranus and Neptune have been nicknamed the 'ice giants'. This is because Uranus and Neptune have more atmospheric water and other ice-forming molecules, such as methane, hydrogen sulphide and phosphene, which crystallise into clouds in the planets' frigid conditions, according to the Planetary Society. For perspective, methane crystallises at minus −296 Fahrenheit (−183° Celsius), according to the U.S. National Library of Medicine. Scientists estimate that the edge of the solar system is about 9 billion miles (15 billion kilometres) from the Sun. Beyond the heliopause lies the giant, spherical Oort Cloud, which is thought to surround the solar system.

SubQuestion No : 34

Q.34 Based on your reading, which of the following options provides the correct summary of the passage?

Ans

✔ A. There are eight planets in our solar system. The inner four planets, also known as terrestrial planets, are closer to the Sun and are called Mercury, Venus, Earth and Mars. The larger outer four planets, also known as Jovian planets, are Jupiter, Saturn, Uranus and Neptune. Jupiter and Saturn are called gas giants and Uranus and Neptune are known as ice giants.

✘ B. There are nine planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune and Pluto. They are arranged in the order from most nearest to most farthest from the Sun. All the planets revolve around their axis and rotate around the Sun's axis. They take different time periods to complete one rotation around the Sun.

✘ C. There are nine planets in our solar system. The inner four planets, also known as terrestrial planets, are closer to the Sun and are called Mercury, Venus, Earth and Mars. The larger outer four planets, also known as Jovian planets, are Jupiter, Saturn, Uranus and Neptune. And the ninth planet is Pluto. Pluto is still considered as a planet because it shows some similar characteristics as other planets.

✘ D. There are eight planets in our solar system. The inner four planets, also known as Jovian planets, are Jupiter, Saturn, Uranus and Neptune. The larger outer four planets, also known as terrestrial planets, are closer to the Sun and are called Mercury, Venus, Earth and Mars. All planets revolve around the Sun at different speeds. They are different from each other with respect to their characteristics.

Read the given passage and answer the questions that follow.
“About what time do you think I’m going to die?“ Schatz asked.
“What?”
“About how long will it be before I die?”
“You aren’t going to die. What’s the matter with you?”
“Oh, yes. I am. I heard him say a hundred and two.”
“People don’t die with a fever of one hundred and two. That’s a silly way to talk.”
“I know they do. At school in France the boys told me you can’t live with forty-four degrees. I’ve got a hundred and two.”
He had been waiting to die all day, ever since nine in the morning.
“You poor Schatz,” I said. “Poor old Schatz. It’s like miles and kilometers. You aren’t going to die. That’s a different thermometer. On that thermometer thirty-seven is normal. On this kind it’s ninety-eight.”
“Are you sure?”
“Absolutely,” I said. “It’s like miles and kilometers. You know, like how many kilometers we make when we do seventy in the car?”
“Oh,” he said.

Have a quick think back to the last time you scrolled through social media. Maybe it was this morning, last night or a few minutes ago. What do you recall? One thing you are bound to remember is the continuous stream of influencers showing off their latest content. These could be videos of influencers discussing the latest skin-care products, the trendiest places to eat, their latest shopping haul or the PR packages they received from various brands.

Much of social media influencing is about getting consumers to buy more products. However, there is a contrasting group of influencers who use their online presence to advocate for changing how people buy and consume.

'Ethical influencers', as we call them, use social media to campaign for leading a more sustainable, healthy and ethical lifestyle. Unlike other lifestyle influencers, ethical influencers face two unique challenges that make it harder for them to build their online profiles.

First, they have to provide a closeup of their everyday life to demonstrate the new lifestyle to their audience. This is different from other influencers who might avoid sharing their personal life and play out a well-curated public persona that can greatly contrast their private life, which can sometimes put them at greater risk of scrutiny.

Second, ethical influencers aim to reach out to a diverse audience, some of whom are not necessarily interested in the new lifestyle. Because ethical influencers are fundamentally trying to promote certain lifestyle choices and habits, they need to connect with a wide range of people to convince them to alter their beliefs and behaviour.

Q.31 Which of the following options best summarises the passage?

Ans

✗ A. It examines the rise of ethical influencers and their advocacy for sustainable living.

✓ B. It discusses the challenges faced by ethical influencers in demonstrating their lifestyle to a diverse audience and promoting sustainable and ethical choices.

✗ C. It provides a comprehensive analysis of social media platforms' influence on consumer behavior, exploring the evolution of influencer marketing and its impact on society in general.

✗ D. The passage highlights the unique strategies employed by lifestyle influencers to maintain personal privacy while engaging with their audience, contrasting them with other influencers.

Comprehension:

Read the passage carefully and answer the questions that follow.

One of the hallmarks of Roald Dahl's writing style is its simplicity. His prose is clear, concise and utterly engaging. Dahl masterfully crafts stories that are accessible to readers of all ages without sacrificing depth or emotional resonance. His choice of words is precise, making it easy for young readers to grasp the narrative, while still providing a rich reading experience for adults.

In 'Matilda', Dahl introduces us to a brilliant young girl with telekinetic powers. Through Dahl's straightforward prose, we enter Matilda's world effortlessly. 'It's a funny thing about mothers and fathers. Even when their own child is the most disgusting little blister you could ever imagine, they still think that he or she is wonderful', reads one of the endearing quotes in the book 'Matilda'. Dahl's ability to address complex themes, such as neglect and injustice, through simple language is a proof of his storytelling intelligence.

In the iconic 'Charlie and the Chocolate Factory', Dahl invites us into Willy Wonka's candy-filled wonderland. His descriptions of the factory are brimming with imagination, 'The walls and ceiling were covered with large patches of something that looked like thick, brown fur carpet. In the places where there were no patches of fur, there were large splodges of a revolting greenish mold'. Dahl's vivid imagery allows readers to visualise Wonka's eccentric world, making it a memorable reading experience.

While Roald Dahl's tales are filled with whimsy and fantasy, they are embraced with important life lessons. Dahl uses his simple prose to convey messages of kindness, resilience and the triumph of good over evil. In 'The Witches', Dahl addresses themes of courage and resourcefulness as a young boy battles a coven of witches. Dahl's straightforward language carries a powerful message, 'You are using the bravery of a small boy and the intelligence of a mouse to defeat your enemy. And you are doing it brilliantly'. Dahl's ability to blend simplicity with profound themes makes his stories not only enjoyable but also impactful.

SubQuestion No : 26

In the iconic 'Charlie and the Chocolate Factory', Dahl invites us into Willy Wonka's candy-filled wonderland. His descriptions of the factory are brimming with imagination, 'The walls and ceiling were covered with large patches of something that looked like thick, brown fur carpet. In the places where there were no patches of fur, there were large splodges of a revolting greenish mold'. Dahl's vivid imagery allows readers to visualise Wonka's eccentric world, making it a memorable reading experience.

While Roald Dahl's tales are filled with whimsy and fantasy, they are embraced with important life lessons. Dahl uses his simple prose to convey messages of kindness, resilience and the triumph of good over evil. In 'The Witches', Dahl addresses themes of courage and resourcefulness as a young boy battles a coven of witches. Dahl's straightforward language carries a powerful message, 'You are using the bravery of a small boy and the intelligence of a mouse to defeat your enemy. And you are doing it brilliantly'. Dahl's ability to blend simplicity with profound themes makes his stories not only enjoyable but also impactful.

One of the hallmarks of Roald Dahl's writing style is its simplicity. His prose is clear, concise and utterly engaging. Dahl masterfully crafts stories that are accessible to readers of all ages without sacrificing depth or emotional resonance. His choice of words is precise, making it easy for young readers to grasp the narrative, while still providing a rich reading experience for adults.

In 'Matilda', Dahl introduces us to a brilliant young girl with telekinetic powers. Through Dahl's straightforward prose, we enter Matilda's world effortlessly. 'It's a funny thing about mothers and fathers. Even when their own child is the most disgusting little blister you could ever imagine, they still think that he or she is wonderful', reads one of the endearing quotes in the book 'Matilda'. Dahl's ability to address complex themes, such as neglect and injustice, through simple language is a proof of his storytelling intelligence.

Read the given passage and answer the questions that follow.

Grapes are one of the most commonly consumed fruits in any Indian household. However, it is not hidden that grapes are heavily contaminated with pesticides, and consuming such fruits can lead to various health issues — including potential harm to the nervous system, disruption of hormone function and an increased risk of cancer.

But what if you can grow these juicy delights easily at home in containers?

Delhi-based urban gardener Rashmi Shukla has been growing grapes on the rooftop of her house for the last seven years. She says growing grapevines in a grow bag and container is not very cumbersome and can be done with little care. And as a bonus, your garden will be frequented by a lot of birds!

According to Rashmi, grapes can be grown through seeds as well as cuttings but gardeners should opt for a sapling. "It will substantially reduce the time taken for the plant to bear fruits. If you use seeds, it may take many years before fruiting, while a sapling can fruit in three years if properly nurtured," she adds.

Comprehension:

Read the given passage and answer the questions that follow.
It is my strongest belief about reading that one should read only what one likes, and because one likes it. I am talking, of course, of our private reading. When we are studying special subjects, or working for examinations, we obviously have to read a good deal that we would not choose to read in other circumstances.
There are people who read a book, not because they enjoy the book, but because they want to be able to say they have read it. There are people who set themselves down to read a book because they think it will do them good. They make a duty of it, a kind of penance. You cannot take a good book as if it were medicine. You only begin to get good from a book when your spirit and the book's spirit come together. A book is like a living person. You must meet it as a friend, and actively like it, if any good is to pass between you.

The English words for tragedy and comedy come from the language of Ancient Greeks. Although the Greeks were not the first to perform plays, they were very interested in the origins of tragedy and comedy. In their writings, the philosopher Aristotle and other Greek writers proposed theories and created stories of how the art form of theatre was developed.

Greek plays were performed in outdoor theatres. At the start, the theatres were in open areas located in the centre of the city or next to hillsides. The audience would stand or sit to listen and watch the chorus sing about the adventures of a god or hero.

Toward the end of the 6th century B.C.E., theatre structures became more elaborate. As the theatre became more and more popular and competitive among cities, theatres became larger with some structures accommodating as many as 15,000 people at one time.

The outdoor theatre was divided into four distinct areas. The orchestra, which comes from the Ancient Greek words for 'dancing space', was a circular area where the chorus would dance and sing. The earliest orchestras were made of very hard earth but eventually, as the theatre evolved, the orchestra was paved with marble or other flooring.

Comprehension:

Read the given passage and answer the questions that follow.

Have you ever said "I hate you" to someone? What about using the 'h-word' in a casual conversation, like "I hate broccoli"? What are you really feeling when you say that you hate something or someone?

The Merriam-Webster dictionary describes the word 'hate' as an 'intense hostility and aversion usually deriving from fear, anger or sense of injury'. All over the world, researchers are studying hate from disciplines like education, history, law, leadership, psychology, sociology and many others.

If you had a scary experience with thunderstorms, you might say that you hate thunderstorms. Maybe you have gotten very angry at something that happened at a particular place, so now you say you hate going there. Maybe someone said something hurtful to you, so you say you hate that person.

Understanding hate as an emotional response can help you recognise your feelings about something or someone and be curious about where those feelings are coming from. This awareness will give you time to gather more information and imagine the other person's perspective.

Suddenly his clutching fingers had found a rough edge of rock, and by raising and lowering his wrists, he could cut the tough ropes against it.
Resolutely, Green applied himself to his task of cutting the ropes which bound his hands, though, his muscles ached and his whole body was faint with fatigue. The vultures were near now. He knew that it would not be long before they would descend to the attack. The thought of those great, curved, cruel beaks and his own defenseless eyes made him shiver.
Suddenly one swooped down upon the prey. Green saw it coming and gave vent to a loud yell, which sent the attacking bird on a wide sweep and momentarily scattered the others.
The birds wheeled in lessening circles above him. Again one of them dashed at his face but swerved when he shouted. The whole flock was perilously near.
Summoning his remaining strength, he wrenched savagely at his bonds and succeeded in cutting them.

Comprehension:

Read the passage carefully and answer the questions that follow.

Several of 3M's most successful products contained man-made compounds called fluorochemicals. In a spray called Scotchgard, fluorochemicals protected leather and fabric from stains. In a coating known as Scotchban, they prevented food packaging from getting soggy. In a soapy foam used by firefighters, they helped extinguish jet-fuel fires. One of the company's fluorochemicals, PFOS—short for perfluorooctanesulfonic acid—often found its way into the bodies of 3M factory workers.

Fluorochemicals had their origins in the American effort to build the atomic bomb. During the Second World War, scientists for the Manhattan Project developed one of the first safe processes for bonding carbon to fluorine, a dangerously reactive element that experts had nicknamed 'the wildest hellcat' of chemistry. After the war, 3M hired some Manhattan Project chemists and began mass-producing chains of carbon atoms bonded to fluorine atoms. The resulting chemicals proved to be astonishingly versatile, in part because they resist oil, water and heat. They are also incredibly long-lasting, earning them the name 'forever chemicals'.

In the early 50s, 3M began selling one of its fluorochemicals, PFOA, to the chemical company DuPont, for use in Teflon. Today, the family of fluorinated chemicals that sprang from Teflon includes thousands of nonstick, stain-repellent and waterproof compounds called PFAS, short for per- and poly-fluoroalkyl substances.

PFAS are used in a staggering array of consumer products and commercial applications. Decades of heavy use have resulted in contamination of water, soil and the blood of people and animals in the farthest corners of the world. PFAS are incredibly persistent, never breaking down in the environment and remaining in our bodies for years. A class-action lawsuit uncovered evidence that DuPont knew PFAS was hazardous and had contaminated tap water but did not tell its workers, local communities or environmental officials. The lawsuit also triggered studies linking the Teflon chemical to cancer and other diseases.

One paper published in 2012 in the Journal of the American Medical Association found that in children, as PFOS levels rose, so did the chance that vaccines were ineffective. Children with high levels of PFOS and other fluorochemicals were more likely to experience fevers, according to a 2016 study. Other research linked the chemicals to increased rates of infectious diseases, food allergies and asthma in children. Dozens of scientific papers have found that in adults, even very low levels of PFOS could interfere with hormones, fertility, liver and thyroid function, cholesterol levels and fetal development.

Q.26 According to the passage, what is the source of the fluorochemicals used in Scotchgard and other products?

Ans

✗ A. A chemical compound discovered by DuPont for Teflon production

✗ B. A safe and versatile material readily available in nature

✗ C. An invention by a company called 3M

✓ D. A byproduct of the atomic bomb development project

Read the passage carefully and answer the questions that follow.

Several of 3M's most successful products contained man-made compounds called fluorochemicals. In a spray called Scotchgard, fluorochemicals protected leather and fabric from stains. In a coating known as Scotchban, they prevented food packaging from getting soggy. In a soapy foam used by firefighters, they helped extinguish jet-fuel fires. One of the company's fluorochemicals, PFOS—short for perfluorooctanesulfonic acid—often found its way into the bodies of 3M factory workers.

Fluorochemicals had their origins in the American effort to build the atomic bomb. During the Second World War, scientists for the Manhattan Project developed one of the first safe processes for bonding carbon to fluorine, a dangerously reactive element that experts had nicknamed 'the wildest hellcat' of chemistry. After the war, 3M hired some Manhattan Project chemists and began mass-producing chains of carbon atoms bonded to fluorine atoms. The resulting chemicals proved to be astonishingly versatile, in part because they resist oil, water and heat. They are also incredibly long-lasting, earning them the name 'forever chemicals'.

In the early 50s, 3M began selling one of its fluorochemicals, PFOA, to the chemical company DuPont, for use in Teflon. Today, the family of fluorinated chemicals that sprang from Teflon includes thousands of nonstick, stain-repellent and waterproof compounds called PFAS, short for per- and poly-fluoroalkyl substances.

PFAS are used in a staggering array of consumer products and commercial applications. Decades of heavy use have resulted in contamination of water, soil and the blood of people and animals in the farthest corners of the world. Value education is essential for moulding people into conscientious and moral societal contributors. It surpasses conventional academic education by emphasising the cultivation of moral and ethical principles in pupils. An essential aspect of value education is its capacity to foster empathy, compassion and respect for others. Value education promotes honesty, integrity and tolerance, which are crucial for creating a culture of understanding and acceptance. This is needed for peaceful cohabitation in a varied society.

Moreover, value education empowers people with the capacity for discerning analysis and the capability to make sound judgements based on moral values. It enables individuals to negotiate intricate moral challenges and decide according to their values and beliefs. Moreover, value education fosters social accountability and civic participation, motivating people to contribute constructively to their communities and fight for fairness and parity.

Value education is highly significant in today's dynamic and linked global landscape. It functions as a moral compass, directing people towards ethical behaviour and accountable citizenship. Therefore, incorporating value education within the curriculum is crucial for fostering ethically upright people who can make significant contributions to the welfare and advancement of society.

Comprehension:

Read the given passage and answer the questions that follow.

Arya always wanted to fly. When she was four years old, she wanted to be Rosamma. Arya saw her at the circus. Rosamma was a trapeze artist. Arya wanted to fly in the air from swing to swing. Her clothes would glitter like Rosamma's. Hundreds of people would clap for her. She would eat cotton candy every day. Her best friend would be a clown. Trapeze artists climb a tall ladder, stand on a narrow board, hold the fly bar and swing! Another trapeze artist is usually waiting to catch them on the other side.

When Arya was eight years old, she wanted to be Kalpana Chawla. She made herself an orange space suit. She wore it day and night.
"Arya, aren't you feeling hot in that suit?"
"Astronauts have to get used to the suit, Amma.
Space is not as safe as Earth is. My suit will protect me."
Kalpana Chawla grew up in Haryana, India. As an astronaut, Kalpana flew around the earth 252 times! Kalpana died doing her job when the spacecraft she was inside broke apart while returning to Earth.

When Arya was twelve years old, she wanted to be Amelia Earhart. Amelia was the first woman to fly across the Atlantic Ocean alone. Soon, Arya heard of Angulia Bai, Kumudammal and Sarla Thakral, the first Indian women to fly a plane. On 30 May 1935, nineteen-year-old Kummudammal and sixteen-year-old Angulia Bai became the first women to obtain the 'A' pilot licence in India. They trained at the Madras Flying Club.

Arya saved up money to attend flying school. She spent years studying. She sat along with pilots to learn from them. She worked hard and ate a lot of carrots! Amma always said carrots are great for the eyes.

Finally, she is ready to sit in the cockpit herself. Today is a special day for Arya. She's very excited because there are two special passengers on her plane this morning.

"Ladies and gentlemen, this is your Captain, Arya. Welcome aboard!"

"Chechi!"
"That's my daughter!

Comprehension:

Read the given passage and answer the questions that follow.

Arya always wanted to fly. When she was four years old, she wanted to be Rosamma. Arya saw her at the circus. Rosamma was a trapeze artist. Arya wanted to fly in the air from swing to swing. Her clothes would glitter like Rosamma's. Hundreds of people would clap for her. She would eat cotton candy every day. Her best friend would be a clown. Trapeze artists climb a tall ladder, stand on a narrow board, hold the fly bar and swing! Another trapeze artist is usually waiting to catch them on the other side.

When Arya was eight years old, she wanted to be Kalpana Chawla. She made herself an orange space suit. She wore it day and night.
"Arya, aren't you feeling hot in that suit?"
"Astronauts have to get used to the suit, Amma.
Space is not as safe as Earth is. My suit will protect me."
Kalpana Chawla grew up in Haryana, India. As an astronaut, Kalpana flew around the earth 252 times! Kalpana died doing her job when the spacecraft she was inside broke apart while returning to Earth.

When Arya was twelve years old, she wanted to be Amelia Earhart. Amelia was the first woman to fly across the Atlantic Ocean alone. Soon, Arya heard of Angulia Bai, Kumudammal and Sarla Thakral, the first Indian women to fly a plane. On 30 May 1935, nineteen-year-old Kummudammal and sixteen-year-old Angulia Bai became the first women to obtain the 'A' pilot licence in India. They trained at the Madras Flying Club.

Arya saved up money to attend flying school. She spent years studying. She sat along with pilots to learn from them. She worked hard and ate a lot of carrots! Amma always said carrots are great for the eyes.

Finally, she is ready to sit in the cockpit herself. Today is a special day for Arya. She's very excited because there are two special passengers on her plane this morning.

Comprehension:

Read the given passage and answer the questions that follow.

Sugar is an important substance for our body and brain to make energy.

Sugar comes from foods called carbohydrates. Carbohydrates help our brains to think and learn. They support our organs like the heart and liver to work well, and help our intestines to digest our food and remove waste. When we eat fruits, vegetables, cereals and grains, we get helpful sugar that the cells in our body and brain need to make energy.

When we eat processed foods like lollies, ice creams and soft drinks, we get extra or added sugars that can be unhelpful in large amounts. These added sugars were thought to provide extra energy – a 'sugar rush' that makes us feel good, happy and energetic.
When we eat sugary treats, it was thought that they make us do more jumping, playing, thinking and learning.

But this is where it gets interesting. A sugar rush is a myth because the body and brain work hard to keep sugar steady. This means you probably feel good from having a treat, not the sugar!

The National Education Policy 2020 is a significant achievement in India's education system, bringing about a fundamental transformation in the field. This strategy, designed to ensure high-quality education for all individuals, regardless of socioeconomic status, prioritises comprehensive growth, adaptability and inclusiveness. A prominent aspect of this is the focus on fundamental literacy and numeracy, guaranteeing that each child attains a fundamental level of competence in reading, writing and arithmetic within the foundational phase. In addition, the NEP 2020 supports a transition to interdisciplinary education, which involves the integration of several fields of study and encourages students' critical thinking, creativity and problem-solving abilities. Furthermore, it highlights the significance of vocational education, aiming to provide students with tangible skills applicable to both work and business. Moreover, the policy emphasises the importance of technology in education, advocating for developing digital skills and using technology in teaching and learning methods. The National Education Policy 2020 aims to advance India's position as a knowledge society and a worldwide leader in innovation and education by prioritising fair access, high quality and relevance.

Comprehension:

Read the given passage and answer the questions that follow.

Reading stimulates your mind. It is like a workout for your brain. When people get old, their muscles begin to deteriorate. They get weaker and their strength leaves them. Exercise can prevent this loss. The same thing happens to people's brains when they get older. Brain power and speed decline with age. Reading strengthens your brain and prevents these declines.

You can benefit from reading in the near term too. Reading provides knowledge. Knowledge is power. Therefore, reading can make you a more powerful person. You can learn to do new things by reading. Do you want to make video games? Do you want to design clothing? Reading can teach you all this and more. But you have to get good at reading, and the only way to get good at something is to practice.

Do not just discount a text because it is unfamiliar to you. Each time you read, you are exposed to new ideas and perspectives. Reading can change the way that you understand the world. It can give you a broader perspective on things. It can make you worldlier. You can learn how people live in faraway places. You can learn about cultures different from your own. Reading is good for your state of mind. It has a calming effect. It can lower your stress levels and help you relax. You can escape from your troubles for a moment when you read, and it's a positive escape.
