FUELING YOUR PASSION

# PWM BRUSHLESS CONTROLLER

## PULSE-WIDTH MODULATION CONTROL

The DeatschWerks C103 Brushless Pump Controller brings true PWM control to the DW810 and the full DW brushless pump lineup, allowing pump speed to closely follow engine fuel demand instead of operating at fixed output. For DW810 users, it completes the pump-and-controller package with the precise control needed to reduce unnecessary fuel circulation, heat buildup, and electrical load while maintaining full pump performance when demand increases. Dual-speed operation is also retained for applications without PWM-capable engine management.

**MSRP | $329**
PN: C103

- PWM control for the DW810 and all DW brushless pumps
- Sold with any DW brushless pump or as a standalone controller
- Matches pump output to fuel demand
- Reduces fuel heating and electrical load
- Dual-speed operation also supported
- Compatible with 8–26V input and voltage boosters

**MSRP | $649**
PN: 9-811-C103-1002

**MSRP | $69**
PN: CONN-BL-HD

## 45-AMP HEAVY-DUTY BULKHEAD CONNECTOR

A compact, fuel-safe electrical pass-through designed for brushless high-output fuel pumps. Its four-wire 12AWG construction supports up to 45 amps while the included DTP-style mating connector provides a clean, reliable connection for demanding in-tank applications.
