

Applications of Biotechnology in Medicine

By

Fazli Rabbi Awan

Scientific Officer,
Health Biotechnology Division,
National Institute for Biotechnology &
Genetic Engineering (NIBGE), Faisalabad

Presently at;

Department of Biochemistry,
University of Oxford, UK

Biotechnology: Overview

- Recombinant DNA technology
- Genetic engineering
- Gene cloning

What is Biotechnology?

Biotechnology = Biology + Technology

Understanding & Manipulation of Genes
(The code of life) and Their Products for
Useful Purposes

3

The Goals of Biotechnology in Medicine:

- To identify and manage the root cause of diseases
- To find ways to improve lives through better health

To fight and cure diseases

4

Medical Biotechnology

- **Production of Drugs and Therapeutics**
- **Genetically modified organisms**
- **Analysis of the Genes in genetic disease**
- **Correction of genetic defects**

5

Molecular Medicine in the Era of Biotechnology

- **Improved diagnosis of disease**
- **Earlier detection of genetic predispositions to disease**
- **Rational drug design**
- **Gene therapy and control systems for drugs**
- **Pharmacogenomics "custom drugs"**

6

Biotechnology Employs Natural, Organic Tools:

- Cells,
- Genes,
- Proteins,
- Enzymes,
- Antibodies

7

Viruses

The Experimental Material for
Biotechnologists

The Genetic Code

The Central Dogma of Molecular Biology

The Central Dogma of Molecular Biology

Genes & Genome

Genes

Comparative Scale of Mapping

31

Human Genome Project

A globe-wide effort to find out the sequence of DNA on all human chromosomes

32

Gene Facts

- size of human genome: 3.4 billion base pairs (bp)
- number of human genes: ~100,000 (was estimated but is 30,000 – 35, 000 now)
- genes vary in length and can cover thousands of bases
 - avg. size: ~3,000 bp
- only about 5% of the human genome contains genes
- function of much of the genome is unknown

33

Tools of Biotechnologist

- DNA/RNA isolation,
- Gel electrophoresis,
- Restriction Enzymes,
- PCR (Polymerase chain reaction),
- Blotting methods (Southern, Dot/Slot, Northern, Western),
- DNA Sequencing,
- Gene Expression
- Gene Cloning etc.

34

Nucleic Acid (DNA/RNA) Isolation/Purification

Sources:

Viruses, Bacteria and Virtually every
Eukaryotic cell,

Human: blood

Gel Electrophoresis

Agarose Gel Electrophoresis

Pulse Field Gel Electrophoresis

Polyacrylamide Gel Electrophoresis

Agarose Gel Electrophoresis of DNA

37

Polyacrylamide Gel Electrophoresis

38

Restriction Enzymes

Selective Scissors for Cutting at specific sites in DNA

39

Blotting Methods

- Southern Blotting
 - Dot/Slot Blotting
- Northern Blotting

40

Southern Blotting: Gel Transfer

Prof Ed Southern

Nucleic Acid Hybridization

Dot-Blot

Slot-Blot

Reverse Dot Blot

43

Polymerase Chain Reaction

Amplification of fragments of DNA or Genes

Requirements:

DNA sample,

Primers,

dNTPs,

Taq Polymerase enzyme,

Thermal Cycler

PCR : Polymerase Chain Reaction

30 - 40 cycles of 3 steps :

Step 1 : denaturation

1 minut 94 °C

Step 2 : annealing

45 seconds 54 °C

forward and reverse primers !!!

Step 3 : extension

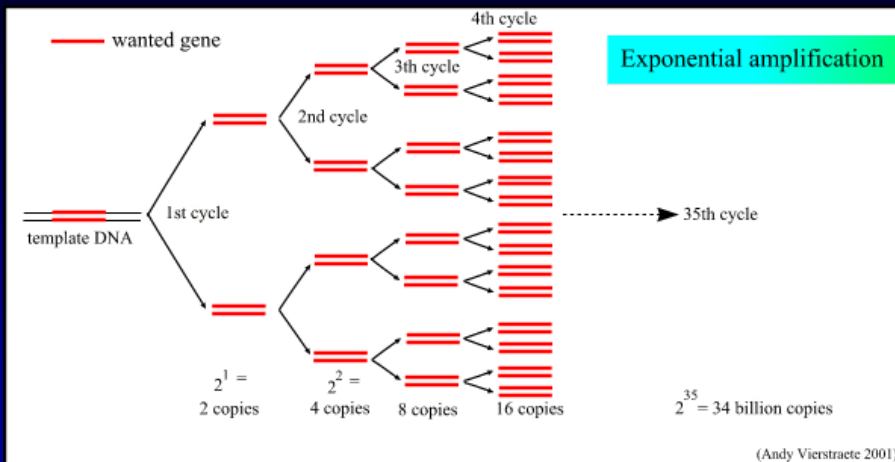

2 minutes 72 °C

only dNTP's

(Andy Vierstraete 1999)

45

PCR Product

46

PCR Product Analysis

DNA Sequencing

Gene Cloning

49

Gene Cloning: Vectors

- Plasmid
- Bacteriophage lambda
- Cosmid
- Yeast artificial chromosome or (YAC)

50

Inserting a DNA Fragment into a Plasmid

Inserting a DNA Sample into a Plasmid

51

Cloning into a Plasmid

Cloning into a plasmid

52

Cloning into a Yeast Artificial Chromosome (YAC)

53

Cloning from Adult Vertebrate Cells

54

Gene Expression

55

Microarray Technology

56

Drugs and Therapeutics

Antibiotics, Hormones, Proteins
Antibodies, and Genetic vaccines.

Biotechnologists now "program" bacteria/cells
to make many other types of drugs

57

Safer, Cheaper Medicines From Biotechnology

Medicines from 'cultured' cells and Microorganisms

58

Antibiotic Production

A bacterium – *Streptomyces* – is a source of antibiotics, immunosuppressants, anti-cancer and anti-parasitic agents.

- Penicillin
- Streptomycin for the treatment of tuberculosis
- Hybrid antibiotics

59

Transfer and Cloning of the Insulin Gene

60

Therapeutics

- Erythropoietin: for anemia
- Glucocerebrosidase (Cerozyme): Gauchers disease
- Growth hormone
- Factor VIII: Haemophilia factor replacement
- Facto IX:.....
- Interferon alpha-2b: for HBV and HCV infections

61

Antibodies

62

Monoclonal Antibody Production

63

Genetic Vaccines

64

DNA Vaccines

DNA vaccines are possibly the most hopeful and powerful alternative to traditional vaccines.

A genetically engineered vaccine is already widely used against the liver infection hepatitis B

65

DNA Vaccines: What are they?

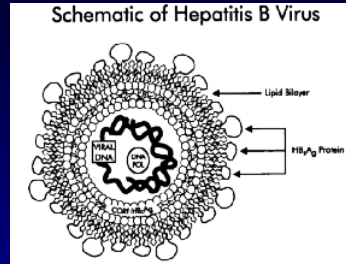

Recombinant antigen proteins etc.

DNA vaccines: Genes encode for antigenic proteins of interest

66

Hepatitis B Virus (HBV):

A recombinant HBsAg vaccine produced in yeast

67

Traditional Approaches to Vaccine Development

Live attenuated virus

Whole killed virus

68

Recombinant DNA Technology and Vaccine Development

A waiting candidate
for vaccine

Gene Therapy

71

What is Gene Therapy?

Correction or Replacement of a Disease causing Gene

72

How can we put genes inside cells?

We need a carrier

73

Adenovirus

74

Gene therapy is being used for ;

- ADA (adenosine deaminase),**
- Haematopoietic diseases,**
- PKU,**
- Cystic fibrosis**

75

Molecular Diagnosis

Infectious Diseases

e.g. HCV, Tuberculosis

Genetic Diseases

e.g. Chromosomal abnormalities, Thalassemias

76

Molecular Techniques

- Dot-blot, Southern blot, in-situ hybridization,
- PCR and related techniques

77

TUBERCULOSIS

Identification and Molecular Characterization of Changes Associated with Multi-drug Resistance among Isolates of *M.tuberculosis*

PCR-based methods are now being developed for identification of drug resistant strains

78

DNA Fingerprinting of *M. tuberculosis*

79

Diagnosis of Hepatitis C

PCR – Positive in >95% of infected individuals.

Currently the most sensitive tests available.

the 5'-untranslated region (UTR)
is used for genotyping of HCV

80

HCV Diagnosis

81

Diagnosis of Genetic Diseases

(e.g. Thalassemia and Chromosomal abnormalities)

82

Leukaemia and lymphoma

Chromosomal translocations

Dysregulation of a proto-oncogene or alternatively the formation of a chimeric fusion gene

These translocations are demonstrable by PCR

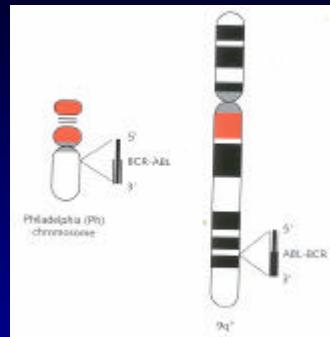

Leukemias: CML, AML & ALL common translocations by RT - PCR

83

Normal configuration of chromosomes 9 and 22

Rearranged chromosome 9 (9q+) & 22 (Ph)

84

ABL-ABL

BCR-ABL

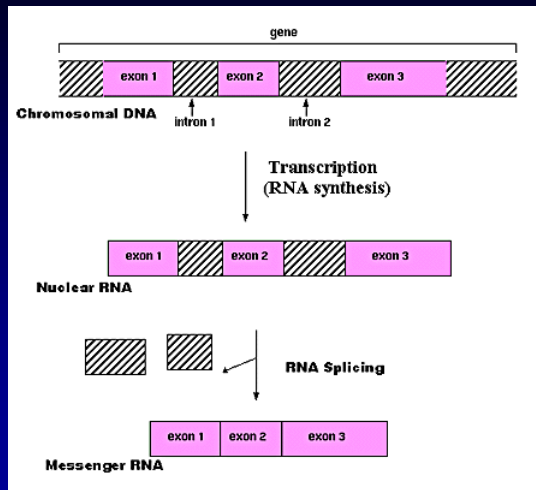

M 1 2 3 4 M M 1 2 3 4 M

Diagnosis by Molecular Methods

Thalassemias (alpha & beta),
Sickle Cell Disease,
Duchenne Muscular Dystrophy,
Hemophilia
HLA Typing

Beta-Globin Gene

87

Beta-Thalassemia Diagnosis

88

Prenatal Diagnosis

89

Chorionic villus sampling

90

Prenatal diagnosis of genetic diseases e.g. thalassemias.

91

Transgenic Animals

92

Transgenic animals:

The models of diseases for better understanding of disease course and pathology.

93

Tay–Sachs and Sandhoff Mice Models

b-hexosaminidase isoenzymes

Hexa *-/-* (a null)

Hexb *-/-* (b null)

94

Transgenic Mice

95

Conclusion

The future findings of DNA technology can open new methods and procedures in different parts of medicine and answer so many questions which have not been detected until now.

96

Family of Biotechnology is expanding

- **Transcriptomics**
- **Proteomics**
- **Structural genomics**
- **Glycomics**
- **Metabonomics**
- + ??...omics

97

Public awareness and understanding of these scientific advancements.

- **Privacy and confidentiality of genetic information.**
- **Fairness in the use of genetic information**
- **Psychological impact, stigmatization, and discrimination**
- **Uncertainties associated with gene tests for susceptibilities and complex conditions**
- **Health and environmental issues**
- **Commercialization of products**

98

Are We Aware of These Issues

???

??
