

The Flag of Japan (1870-1945) Land of the Rising Sun

With 20-20 hindsight, we see that *Humility and acceptance of reality – the foundations of democracy, science and religion – were the main losers of WWII*: False pride defeated reverence for truth, God and human dignity, depriving the human race of benefits Aston [1] had promised in the last paragraph of his 1922 Nobel Prize Lecture: *"The human race will have at its command powers beyond the dreams of scientific fiction" !*

On viewing Hiroshima's ruins in August 1945, Kuroda [2] showed great respect, insight, even reverence for energy (*E*) in cores of the uranium atoms that destroyed Hiroshima:

"The sight before my eyes was just like the end of the world, but I also felt that the beginning of the world may have been just like this" [reference 2, p. 2].

Subsequent precise experimental data and observations confirmed Kuroda's 1945 insight [2], but the powerful solar energy rays were removed from Japan's oldest national flag [4] and textbooks of stellar and nuclear physics were falsified [3] after WWII. The Emperor of Japan had long been considered a direct descendent of the Sun goddess, *Amaterasu* [5]

Rays of energy manifesting the Sun's vibrant, pulsar core are a reminder of the forces that birthed and still control the solar system [3], perhaps the source of *Om* [6], the primordial sound in Hinduism and Buddhism, or the *"conscious and intelligent Mind"* Max Planck [7] assumed behind the vibrations of each atom the Sun produced, perhaps even the source of conscious awareness in the biological systems [8, 9] the Sun sustains today.
