400 Series

In the hospital and healthcare environment, surgical instruments and devices require high level cleaning prior to sterilization and re-use. The use of ultrasonic cleaners for this critical step has been the accepted practice for generations. The 400 series allows you to add the convenience of just cleaning or rinsing and drying in a single console. Sonic Systems, Inc. (SSI) has been at the forefront of this application for over forty years.

Standard Features:

- Stainless Steel Console
- Safety Interlocked Cabinet Door
- PLC Controlled
- Rear Control Panel with Operator Interface Terminal (OIT)
- Automatic Fill and Drain
- Selectable Liquid Level
- Low Liquid Level Safety Control
- Aqualift® Power Operated Lid
- Piezoelectric ULTRABRAZE® Ultrasonic Transducers
- Aggressive Rinse
- Thermostatically Controlled Forced Hot Air (on some models)

SSI engineers and manufactures the 400 series in-house to ensure a quality product and customer satisfaction. If you would rather separate the ultrasonic clean and rinse/dry functions into two distinct consoles you should consider our [200 series](#).

Optional Features:

- Instrument Trays
- Instrument Tray Lift
- Detergent Injector
- Tank Heater
- Cannulated Instrument Irrigator
- Manual Lid
- DI Water Hook-Up (rinse cycle only)
- Instrument Lubrication (rinse cycle only)

Model	Chamber Size	Function
