

Special Session/Workshop Announcement:
Fracture Mechanics in Industry
Organised by

Prof. Dietmar Klingbeil¹, Chair

Prof. Uwe Zerbst¹, Co-chair

¹ Federal Institute for Materials Research and Testing (BAM), Germany

Dear colleagues,
as you might know, ICF 14 will take place on June 18-23, 2017 on the Island of Rhodes, in the Aegean, Greece. On the side-lines of the conference we plan a special workshop in order to examine what we think should be a very interesting subject, namely the treatment of fracture problems in the industry by fracture mechanics.

We kindly ask you for a contribution on that field. Your presentation may treat any kind of aspect and will not be restricted at all unless you do not extent a time limit of 45 minutes.

It would be very important to inform about the industrial application of fracture mechanics especially including the following three main topic areas:

Experiments and experimental setup

Simulation and use of software

Assessment of cracks and estimation of lifetime.

Our intention is to bring together scientists and researchers from industry as well as from universities and research institutes on behalf of an exchange in information and experiences.

Please email your expression of interest with a tentative title of your presentation together with the name, affiliation and email address of the corresponding author and the names of probable co-authors before December 15, 2016 (Subject line: ICF14-FMWS) to:

dietmar.klingbeil@bam.de (Prof. Dietmar Klingbeil)

Thank you in advance for your interest and commitment.

Sincerely,

Prof. D. Klingbeil
