

CEREDIGION BIRD RINGING REPORT 2010– 2011

Tony Cross

As previously, this ringing report attempts to cover all BTO bird ringing undertaken in Ceredigion by resident and visiting bird-ringers. Those known to be operating, and whose totals (or nil returns) have been submitted, are listed at the end. If anyone knows of other bird-ringers active in the county please let me know so that their totals can be included in future reports.

2010 and 2011 continued the recent run of improved numbers and diversity of species ringed within the county, whilst still maintaining a heavy focus on species of high conservation concern such as waders, raptors and chough.

In 2010 5,321 birds of 96 species were ringed, the highest annual total since 1992, whilst in 2011 5,033 birds of 92 species were ringed. This brings the grand total of birds ringed in Ceredigion since 1991, when these ringing reports began, to 58,810 of 144 species with Goldeneye, Little Ringed Plover, Dotterel, Arctic Tern, Sandwich Tern, Little Owl, Rook, Wryneck and Lapland Bunting all featuring for the first time. The ringing of the first Wryneck in Ceredigion was a personal highlight for me, a species I have been longing to catch at my regular Borth mist-netting site for nearly 30 years!! It did however cause considerable upset amongst some local bird-watchers which is regrettable. I had considered carefully before attempting to catch the bird and had waited for several days so that local bird-watchers could have the chance to see it. Having spent 7 days in the area I thought it was unlikely to stay much longer whether ringed or not ringed. Even so I had no great reason to believe that catching and ringing it would hasten its departure. When caught the bird (an adult) had good fat deposits and weighed 42.4 grams which is right at the top of the range of weights given in Birds of the Western Palearctic (BWP). This fact and the fine weather at the time were almost certainly greater factors in its decision to move on. Contrary to what has appeared elsewhere the BTO do encourage ringers to ring Wrynecks and a range of other birds of conservation interest and indeed offer a rebate on the cost of rings for such species. The targeted ringing of national rarities however is not permitted unless the bird is already wearing a ring that could prove useful in identifying its provenance. Permission to catch national rarities must be sought from the ringing office and is not normally granted.

The formation of the Teifi Ringing Group (TRG) has done a great deal to further bird research in the south of the county and their continued projects including the Constant Effort Site (CES) at Teifi Marshes has contributed much information on the movements of Reed and Sedge Warblers and the importance of our west coast reed beds during migration. During the two years combined over 1,000 Sedge Warblers and 500 Reed Warblers were ringed in Ceredigion. The latter total is particularly amazing given that when I first moved to Ceredigion in 1982 Reed Warbler was only just beginning to colonise the county! TRG have also had great success in targeting Rock Pipits and it is to be hoped that the 60+ birds marked so far yield some interesting information about a species we know very little about in this part of the country.

Wader catching, in particular wader dazzling by Paul Leafe, Owen Williams, Gareth Richardson, Arfon Williams and myself, once again figures highly in this report. The number of Golden Plover, Ringed Plover, Snipe, Woodcock and Whimbrel caught in the county all represent major contributions to the National totals. Because of the success in targeting these infrequently ringed species colour-ringing schemes were started on Whimbrel in 2010 and on Golden Plover in 2011. Hopefully these will help to increase the amount of information gathered from those birds caught. Any sightings of ringed or colour-ringed birds should be reported either to myself or directly through the BTO. In the last report I mentioned the formation of the Woodcock Network and the early successes with this species. The total of Woodcock ringed in Ceredigion alone already exceeds 800 and the results of this increased effort can be clearly seen in the recovery summaries with birds recovered from Russia (7), Spain, Germany, France and the Netherlands. Maps of these, and other Woodcock recoveries can be viewed on the Woodcock Networks website www.ringwoodcock.net

Some significant county milestones were reached in the period covered included ringing the 10,000th Ceredigion Pied Flycatcher, the 5,000th Swallow, the 1,000th Red Kite and Barn Owl, the 800th Chough and Woodcock, the 500th Ringed Plover and the 100th Whimbrel!

Notable recoveries other than the Woodcock previously mentioned include a 21 year old Buzzard and a 13 year old Goshawk. Waders were represented by a Dunlin and Sanderling controlled from the same ringing site in Portugal and a Dunlin ringed at Ynyslas was recovered in Spain. Passerine recoveries included a Chiffchaff in Spain, several French and a Senegalese Sedge Warblers, a French Pied Flycatcher, a Norwegian Blackbird and a Lithuanian

Starling. An intriguing record of a Starling found in Norfolk 22 years after it was ringed under the pier in Aberystwyth remains to be resolved – just how old was it when it died??

As usual thanks go to the following licensed ringers for contributing their totals for 2010/2011: Dave Anning (DA), Graham Austin (GA), Roy Bamford (RB), Brenda Cook (BC), Tony Cross (AVC), Paul Leafe (PL), Jerry Lewis (JML), Gareth Richardson (GR), Arfon Williams (AW), Owen Williams (OW) and the Teifi Ringing Group (TRG). I would also like to thank the Countryside Council for Wales, Wildlife Trust (for West Wales), The National Trust, Forest Enterprise and the many other landowners who granted permission for ringing during the period. Finally thanks too to all the many people, too numerous to mention, who assisted with ringing activities during the period but especially Donall Cross, John E. Davis, Peter Davis, Mick Green, Mike Hayward, Jane Kelsall, Len Kersley, Red Liford, Alan Lowe, Barry Penney, Matt and Charly Potter, Matt Prior, Liz & Brian Snell and Adrienne Stratford

The activities and findings of bird-ringers operating in Ceredigion can be followed on two regularly updated blogs;

SELECTED RINGING RECOVERIES

Key to symbols and conventions used:

Age when ringed	Manner of recovery
1 Pullus or nestling or chick (no. ringed/brood size)	v Caught or trapped, released with ring
2 Fully grown, year of hatching unknown	R Controlled by another ringer
3 Hatched calendar year of ringing	vv Ring number read in field, or sight record of identifiable colour ring
4 Hatched before calendar year of ringing but exact year unknown	vB Breeding where recaptured
5 Hatched in previous calendar year	+ Shot or killed by man
6 Hatched before previous calendar year but exact year unknown	xF Found freshly dead or dying
7 Definitely hatched 2 years before year of ringing	xL Found dead (not recent)
8 Hatched 3 or more calendar years before ringing	() Caught or trapped alive and not released or released without ring
9 hatched more than 4 calendar years before ringing	/?/ Manner of recovery not known
	Sex: M=Male; F=Female
