Preset

Preset helps artists create their own chain of photo filters to create a unique filter. Preset is available for iOS 8 and 9.

Preset allows users to save their custom preset that they can use later to maintain a design aesthetic.

Preset Features

Create your own Presets

User can make their own presets by mixing, matching and adjusting 27 filters from our library.

5 Presets from Pre Designed by Us

On initial install, users have 5 presets they can use to edit and learn from.

Select a Custom Color

Pick an exact color with our color picker to use with Monochrome, White Point and False Color Filter

Gestures

Easy to use gestures allow users to swap, delete and temporarily disable filters in their layer chain.

Users can also pinch on the image they are editing to zoom. They can double tap to go back to original scale.

Organize your Presets

On the main screen, user can organize Presets by rearranging them. They can also delete them there.

Share Photos to any installed Social Network

Share your Photos to Instagram, Facebook, Twitter or any app on user's device that has a share extension.

Able to Multitask on iPad

The app supports full use in either side-by-side or slide over mode.

Photo Extension

Users can apply their presets inside the Photo App by using our extension. They can apply a preset then save it to their device.

Available for all iOS Devices

Preset is available on any device that supports iOS 8 or 9. That includes iPad 2 and iPhone 4S.
