Building 9
Rockford, Illinois 61109

Dear Sirs:

We are grateful to Freedom Field and your generous support of our school project of building a photovoltaic solar system. We thank you for providing a Danfoss DLX 4.4 inverter.

With the help of David Martindale from Ballard Engineering, we completed the installation of the system several weeks ago.

Because of your generous support and your mission to increase awareness of renewable energy in the region, we decided to invite other students in the junior high and high school age group to participate in the project. In addition, we put together a series of classes that looked about the various aspect to residential renewable energy projects.

We provided the students with opportunities to,

1) assess the families electrical usage, 2) consider solar system solutions, 3) gain understanding about design of a residential system, and 4) participate in the actual construction of the system. We had 8 students participate in the course.

Thank you for working to make renewable energy a larger part of the fabric of life here in the Midwest. This was a great project and has been generating electricity for several weeks now.

Thank you,

A handwritten signature in cursive script that reads "Eric T. Skelton" with a stylized flourish underneath.
